

THE SECRET WORLD OF VAASTHU

(English version of the Telugu book "VAASTHU SASTRA VASTAVALU")

This volume, the first and foremost of its kind in contemporanea modern Vaasthu, is the outcome of a dedicated and devoted observation on many pilgrim centres, industrial installations and residential buildings from Kashmir to Cape Camorian, India; and a detailed geographical geophysical and geological study of the countries of the World.

PREFACE

Whenever I think of nature and its manifestations on earth, I feel that animals and birds do lead healthier and happier lives and maintain unity among themselves in contrast with human beings, who are endowed with more developed faculties. Same feeling makes me think of the universal phenomenon like earth, sun, air and water, which possess a sort of natural discipline in them, on account of which, they cast homogeneous influence on all the living beings. I believe that the reason for the unhappiness of a human being lies in the basic inability of his habitat, in offering him the best out of the five elements, that govern his life pattern.

Above point of view had become, in course of time, a conviction and dragged me into the study of the great science of Vaasthu since 1957. I have been pursuing, probing and exploring this dormant science with an ultimate objective of proving to the world that, a House built as per Vaasthu Certainly become a Heaven.

In my long sojourn, I had acquainted myself with various oriental schools of thought in Vaasthu and novated certain redundant concepts. I began my experiments with my own house in 1964, and started staying in that Heaven which has given me every thing I longed for. I opened my new financial carrier in the same year, as a partner in an oil mill and even today, it continues to be my main occupation.

During the initial years of experimentation, my better half, who is very co-operative, used to get surprised over the alterations and additions, effected to our house in the name of Vaasthu. I used to tell her that my endeavour is to usher in an era of prosperity in the house and assured her that the amount of investment would never go waste. Further I used to tell

Correct the site first and erect the house — Enjoy the life better with the loving spouse.

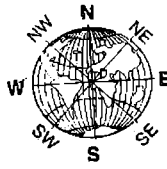

her that when my experiments yield results they would become a part of the great science of Vaasthu, which would be pursued and followed by millions. There after I never had to answer her, as all my experiments started yielding expected results and took me aloft in my research.

In May 1989, I had purchased a Swaraj Mazda van and went on an expedition alongwith my ten like - minded friends with a view to observe the power of Vaasthu on various temples, historical monuments, secular structures and industries. We travelled from Benares to Cape Camorin keenly observing the positive and negative effects of Vaasthu on various structures. That tour enlarged my knowledge and gave the exposure and experience to guide others in the field of Vaasthu.

In consonance with my cherished ideal, of relieving the great science of Vaasthu from the clutches of a few selfish individuals and to make it available to one and all, with the ultimate objective of universal peace and prosperity, I brought out a book on Vaasthu in Telugu-titled "VAASTHU SASTRA VAASTHAVALU" in 1987. I am happy that the above book has been well received by the readers and witnessed twenty eight editions in a span of Sixteen years.

I find that some pseudo experts on Vaasthu are trying to copy the contents of my book and are deceiving the general public by claiming to be the authorities on Vaasthu. I sincerely request such persons to understand the great science of Vaasthu and arrive at firm conclusions of their own by experimenting the same on their own residences, before propagating and misguiding the gullible public.

The Science of Vaasthu has undergone a sea - change over a period and the present version of Vaasthu has attained the status of a science. In this connection I must mention the name of the great exponent of modern Vaasthu Shri Mudragada Rama Rao, who did yeoman service to cause of Vaasthu, by trying to bring it out from the clutches of the orientlists. I

acknowledge with thanks the efforts of Shri Bhogineni Venkata Ratnam another exponent of Vaasthu, who hails from the village Kavuluru in Krishna District of Andhra Pradesh, for his support and guidance in my endeavour. Further I acknowledge the contribution of Shri S.K.V. Krishnam Raju of SriRampur in Vizag District of Andhra Pradesh for his invaluable suggestions in bringing out the above book. I also acknowledge the services of Shri. T.S. Prakasa Rao of Rajahmundry who helped me in drawing various plans and layouts in the Telugu book.

I record my warm appreciation for the services of Civil Engineers Shri Y. Siva Sankara Reddy, Shri N. Harichandra Reddy, G. Ramachandraiah, L.S. Sunil, T.S. Sai Ram, P. Nagi Reddy, G.H. Satyanarayana, B. Janga Reddy. I appreciate the artistic efforts of Shri Lakshman in designing the cover page. I compliment the efforts of Mr. Ramesh Goli and Mr. B. Venkatesh our computer operators, in composing this book and Mrs. Y. Sarada Reddy for her relentless efforts in effecting corrections in the final proof.

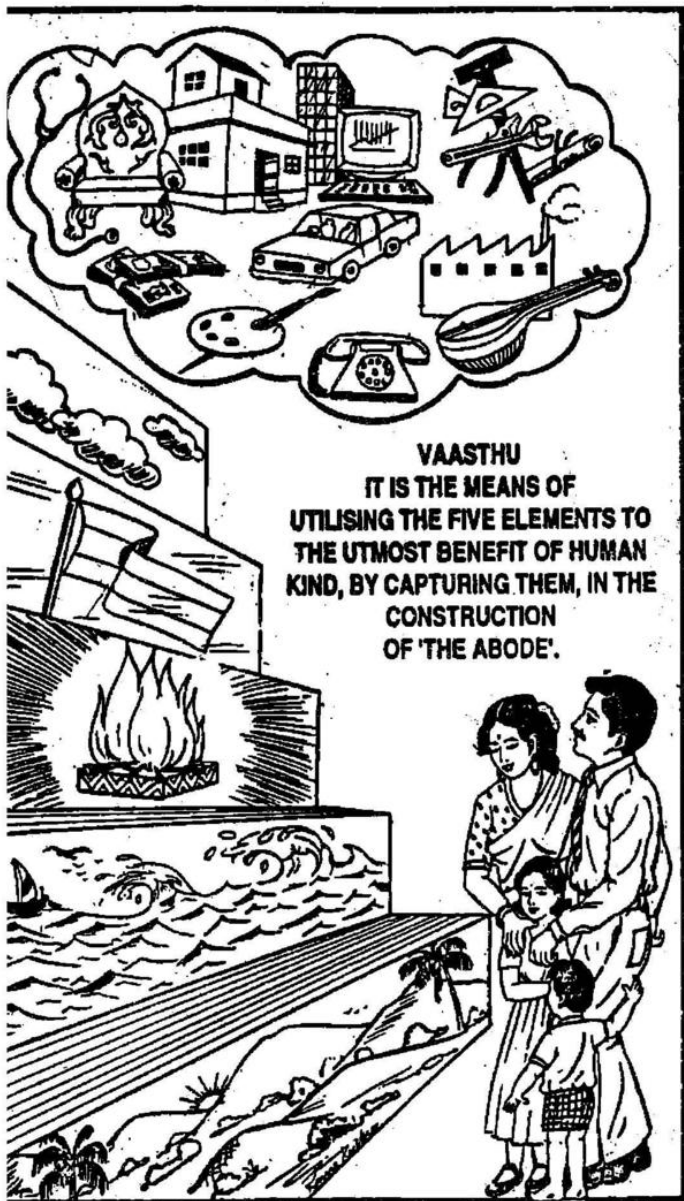

Above all I record my ineffable gratitude and appreciation for the efforts of Shri P. Chandra Sekhar in rendering my Telugu book into English not merely as a translation but almost a recreation by adding his literary taste, flair for writing. I record my ineffable gratitude for the efforts of Shri N. Janarthan, in bringing update this fourth edition with relevant additions; thoroughly revised.

Lastly I thank my innumerable readers, who are a constant source of inspiration to me in my unending pursuit, to offer the quintessence of Vaasthu to one and all.

(GOURU TIRUPATI REDDY)

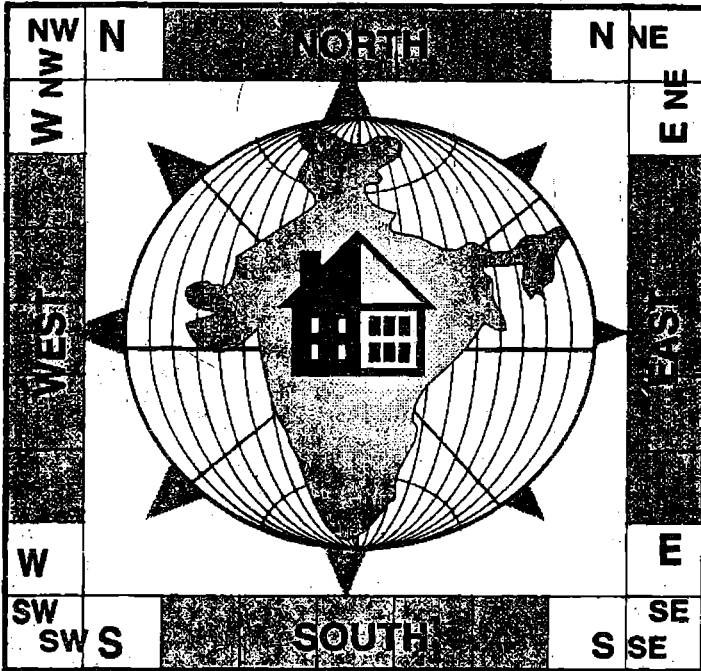

The Secret World of Vaasthu

VAASTHU AT A GLANCE

The above diagram shows all the exalted and exiguous points in the site to make room for the different parts of the house. Details are as follows :

1. Well, borewell, water sump, deity, gate, door, cellar, verandah, living, drawing and portico.

Laying of foundation from southwest – Proves to be auspiciously best.

2. Well, borewell , watersump, deity, septic tank, gobergas, cellar, basil and flower plants.
3. Septic tank, gobergas, dining, store, deity, basil, small plants.
4. Kitchen , boiler, stairs, latrine, bathroom, out house, trees.
5. Kitchen, door, gate, drawing, living, office, toilet, portico, trees, out house, water sump above the ground.
6. Door, gate, bed, dining, drawing, store, stairs, toilets, trees, out house.
7. Bedroom, toilet, store, stairs, granary, trees.
8. Bedroom, store, godown, office, stairs, overhead tank, out-house, hefty trees, water sump above the ground.
9. Bedroom, office, machinery, godown, overhead tank, stairs, out-house, tall trees.
10. Bedroom, store, toilet, stairs, trees.
11. Door, gate, drawing, dining, living, toilet, stairs, trees, out-house, bed-room.
12. Door, gate, drawing, living, toilet, bed room, cattile shed, granary, kitchen, portico, water sump above the ground.
13. Kitchen, living, toilet, bedroom, stairs, plants.
14. Bed room for children, dining, living, study, toilet, septic tank, gobergas, plants, water sump above the ground.
15. Door, gate, septic tank, water sump, drawing, living, deity, cellar, basil and other plants.
16. Door, gate, well, borewell, water sump, verandah, deity, living, drawing, portico, cellar.

Well in the east – An everlasting pleasure resort .

VAASTHU - THE BOND OF FIVE ELEMENTS

Man builds the House for his Home. Nature consists of five elements **SAFEW** viz., Sky (Space), Air (Atmosphere), Fire, Earth and Water. Vaasthu is the means of capturing the positive bountiful power of the three elements: the Earth, the Water, the Fire, (the Sun) in a proper and proportional manner, along with the Air, in our House, making it the Abode for all of them, for peace and prosperity of the Human Beings; and the World (Vishwam) at large. The importance of all these elements in Vaasthu is discussed below :-

1. **SKY (SPACE) :**

Sky is an endless space. The entire universe exists in this ethereal vacant space. The principles of creation are multifarious. It is said that two billion years ago, the entire universe was full of an explosive material. As per one school of thought a big explosion had caused mass, the material disintegrate and scatter in all directions. These fragments are called Milky ways as they appear like drops of milk sprinkled over the sky. Each Milky way is composed of dust and gasses, besides innumerable stars. Our solar system is located at the end of one such Milky way. From this it is clear that the universal concept of sky is beyond human imagination or comprehension as it is subjected to never ending expansion. The main characteristic of the SKY is **SOUND**.

2. **AIR (ATMOSPHERE) :**

Air envelopes the earth in motion. Air is composed of Oxygen, Nitrogen, Carbon-di-oxide, Helium, Neon, Crypton and vapour. Oxygen and Nitrogen are in the proportion of 21: 72. Oxygen is indispensable and vital for the survival of living organism and also for combustion. There can be no vegetation without

Well in southeast of the house - Always detrimental to women in the house

Nitrogen. AIR has two characteristics viz., sound and sense of TOUCH.

3. FIRE :

The whole atmosphere had been compressed into the shape of a globe by the reciprocal gravitational pull of atoms scattered all over. Due to the friction between the atoms heat is generated and it pervades through out the universe. These fragmented atoms, when get converged or compressed, become charged with heat and light, due to friction and spears out into all directions. That is why, when cloud converges more and more, it bursts out into pieces. When they again integrate, they emit light and energy. This phenomenon leads to the formation of a constellation. Our Sun is a mammoth star and the principal planet of a constellation. The thermonuclear reaction in the sun is the source of heat and light generated by the sun. Thermonuclear reaction is nothing but the conjunction of four hydrogen atoms leading to the formation of a helium atom. Earth derives heat and light from the sun. Without sun there would not have been days, nights and seasons on earth. Besides sound and sense of touch, FIRE has the property of SHAPE.

4. WATER :

The thick hot gasses enveloping earth had gradually cooled down and got transformed into clouds. Due to the rainfall from clouds, water flowed into low lying areas of earth's surface and oceans were formed. The rains continued even after the formation of oceans and mountains. The rainfall on the mountains flowed down into plains in the form of rivulets and reached the seas in the shape of rivers. Water is a vital element for all living beings. We get water in three forms viz., liquid(water), solid(ice) and gas (vapour). The liquid form gets converted into vapour due to the heat of the sun and subsequently gets transformed into clouds and finally turns into water again and reaches earth. The perennial

Well in the south - A doom to loathful female death.

water cycle viz., rain producing rain is the mystery of nature.

Water is the compound of Hydrogen and Oxygen in the ratio of 2:1(H_2O). The presence of water in all living organisms varies in proportion. WATER has four characteristics viz., sound, sense of touch, shape and TASTE.

5. EARTH :

Billions of years ago the atmosphere comprising dust particles began to converge into a globe due to the reciprocal gravitational pull among the particles. The globe started rotating around itself and in course of time got split into various fragments. During this process 90% of the mass remained static while 10% started encircling the static mass in an elliptical orbit. The static mass became the sun and the revolving mass took the shape of nine planets. Earth is one of them and occupies the third place in distance in the solar system.

The scientists have established that the earth was formed about 460 crore years ago. Originally earth was a fiery ball. Due to the melting of rocks the surface of earth has been formed. It gradually drifted away from the orbit of sun and got cooled and finally attained solidity. The upper most layer began to harden and in course of time this hardened surface developed deep cracks, through which a hot liquid sprang up and lead to the formation of mountains and valleys. The thin layer of liquids depressed and when cooled the ditches are formed. When it rained for many many years the water stored into it and the Oceans and Seas are formed.

According to the scientific version, earth is a mammoth magnet, which is said to have acquired magnetism, due to the magnetic particles embedded within. It has two poles viz., north pole and south pole. The southern pole of this magnet is located in the northern hemi-sphere and the northern pole in

Southwestern well – Path to hellenic and drift.

 the southern hemi-sphere of the earth. That is the reason why the magnetic needle always tends towards north, in accordance with the principles of magnetism, that is opposite poles attracts and analytical, distracts each other. The poles of magnet are indivisible.

Based on this magnetic principle the theory of Vaasthu prescribes that, pressure or load should be placed towards south. The Science of Vaasthu prescribes that while sleeping, one should place ones head only towards south, as per the above magnetic principle in order to lead a healthy life. Besides the properties of sound, sense of touches and shape, EARTH, has the taste characteristic sense of SMELL.

These five elements reside in the nature in a specific predetermined proportion and are governed by the principles of creation, which are beyond human comprehension. A study of the effect of these five elements becomes necessary, to appreciate the science of Vaasthu in its true spirit, and also to get satisfactory answers to the questions regarding its efficacy. For instance, the questions like, what happens if a corner of a house is extended or curtailed? 'why should the hearth be arranged in southeast only?' how is it that northeast only is the ideal place for a borewell? etc., find appropriate answers if the relevance of five elements to Vaasthu is studied.

Answering such queries posed by the people, who are unable to comprehend the bond between the elements of nature and the human habitation, becomes a futile exercise. It is for the intellectuals to muse over and deliberate on such celestial issues. Unlike yoga which is self revealing, Vaasthu is a result oriented subject, backed by substantial proof, based on experiments, to be revealed face to face.

Well in the west – A hell in the life of the host.

INAUGURAL FUNCTION OF VAASTHU POOJA OR LAYING FOUNDATION STONE

Following are some of the pertinent issues which storm the brain of individuals, who try to go beyond the tenets of Vaasthu.

Laying foundation is the foremost step in constructing a house. Doubts are being expressed regarding proper place for laying foundation. Some people opine, that the foundation stone should be laid in the Eesanya i.e. northeastern part of the entire plot, while some are of the view that it should be laid in the northeastern part of the lay-out of the proposed house. Both the above versions are acceptable to the science of Vaasthu. However, it should be noted that the persons, performing the ceremony of laying foundation stone, should invariably face east and offer the auspicious grain mix (called Nava Dhaanya) in the foundation pit during the Vaasthu pooja.

Now the question arises, why at all, the foundation stone need be laid in northeast only. The immediate answer would be that the principle had been enunciated by the earliest treatises on Vaasthu and all the exponents of Vaasthu continued to follow the same principle through the ages without any controversy. However, if we go deep into the concept of laying foundation stone, it appears that excavation in northeast not only makes northeast light, but also makes the southwest comparatively heavy and both the above features yield very good results, as per the science of Vaasthu.

WHY SHOULD WE LEAVE MORE VACANT SPACE IN NORTH AND EAST ?

Sun is the source of creative process on earth. The entire physical world composed of atoms is influenced by the rays of the

Well in northwestern portion – Leads to perennial litigation.

sun. That is why the sun is worshipped as a manifestation of the God. Modern man, who once disbelieved sun as God, has now started considering him as a potential source for creation on the surface of earth. The diametre of the sun is 8,65,380 miles. Powerful fumes generated by the thermonuclear reaction on the sun travel with a super sonic speed. The quantity of heat generated by the sun is expected to be about 3.7×10^{26} watts. However the planet earth receives only a fraction of the above heat. But that fraction itself is enough to keep the vegetation, trees and food production sufficient for the existence of living organism. The water vapour, formed because of the rays of sun, turns into clouds and brings us rain.

Scientists have proved that the sun rays have many positive effects on human body. It is said that basking in the morning sun after applying any vegetable oil to the body, helps in the formation of vitamin 'D' in the body, which has a curative effect on diabetes. The rays of the sun are composed of seven colours forming a spectrum viz., violet, indigo, blue, green, yellow, orange and red and this phenomenon is made use of in nature cure, whereby the process of reflection of rays through mirrors on human body, is adopted for curing certain diseases. So, is the immense invaluable power of the sun. That is why our ancestors had presented Surya Namaskaras as alma medica for best physique.

With the development of the science of Vaasthu, man has started constructing houses as per its tenets and thus the positive influence of the five elements viz., earth, water, light, air and sky could be realised. House is the inseparable factor in the life of man. This has been realised and a science is evolved about it, which is called Vaasthu.

As per Vaasthu, land extending from east to west is termed as 'Purusha Sthaana' (Masculine site) and is considered as the best, because it is exposed to sun light more prominently. To ensure

Well in north – An arm of benediction and warmth.

 free and direct access to the morning sun rays, the science of Vaasthu forbids any type of high structures or tall trees in the eastern side of the building. Further it has been prescribed, that the vacant space in east must be more than that of west. It is laid down that tall trees should be planted in the west, to prevent the powerful rays of the sun during the afternoons, causing harm to the human beings and for helping the process of photosynthesis. The effect will be vice versa, if the tall trees are grown in the east. With the growing threat of Green-house effect due to the extinction of ozone layer, the tall trees in west and south have become the only phenomenon, which would come to the rescue of the residents in any house, and the world at large.

The logic behind the principle of leaving more vacant space in north also is to ensure more quantity of sunlight to the inhabitants during Uttarayana (Northward movement of the sun). The northward movement of the sun during the period of December 21st to June 20th is called Uttarayana. The southward movement of the sun during the period June 21st to December 20th is called Dakshinayana.

During the Uttarayana period many diseases and ailments, that were prevalent during Dakshinayana, subside and cause less suffering. That is why the wise suggest, that for performing marriages, undertaking construction activity and for other auspicious projects, Uttarayana period proves to be congenial. Bheeshma, the staunch warrior and the commander - in - chief of Great Mahabhatara battle lied upon the Bed of Arrows awaiting for the arrival a Uttarayana, and left his last breath on Ekadashi, after teaching all the secrets of jurisprudence, ethics and philosophy to Yudhishtira, on the request of Sri Krishna. The reason behind such logic is the positive impact of the rays of the sun during the period.

In order to derive maximum benefits out of the sun

Well in northeast – Unparelled benediction almost.

rays during Uttarayana, it is suggested that there should be more vacant space in north and east rather than in south and west. Contrary to it the vacant land in south and west would prove detrimental to the interest of the structures, be it a house, industry, hut or a temple and paves way for its dilapidation.

AN INTRODUCTION TO THE SCIENCE OF VAASTHU

The science of construction of towns, temples, mansions and houses on Vaasthu (the earth), is called Vaasthu. The term Vaasthu is derived from the word Vasa, meaning habitat. In "Amara Kosa", the Sanskrit dictionary, Vaasthu is referred to as the site, fit for construction of a residence. Hence the science pertaining to the construction of houses, came to be known as Vaasthu.

According to Bhavishyottara Purana, the epic depicting future, every one must have an ideal house fit for residence. It also states that the rituals and ceremonies performed by people residing in rented accomodation do not yeild desired results. However, our research and experience on Vaasthu has proved that the efficacy of Vaasthu remains unaffected irrespective of the ownership of the habitat.

According to Varaha Purana, an ancient epic, a king named Sankhu was able to regain his empire by performing penance on a hill situated to the west of the lake, on the advice of Aakasavani, the celestial voice. This goes to say that there must be an elevated terrain in the west. The stories and anecdotes in epics may seem to be legendrical but the contents are based on hard facts. That is why great saints (Rishis) had referred to Vaasthu as a means of human welfare.

In Mastya Purana, the acqua epic, eighteen preceptors

Constructing the house with the water – Makes the house a golden resort.

of Vaasthu have been mentioned viz., (1) Bhrugu (2) Atri (3) Vasista (4) Viswakarma (5) Maya (6) Narada (7) Nagnajit (8) Visalaksha (9) Purandara (10) Brahma (11) Kumaraswamy (12) Nandisa (13) Sounaka (14) Bhargava (15) Vasudeva (16) Anirudha (17) Sukra, and (18) Bruhaspathi.

Albeit the name of the saint Kasyapa had not been included in the above list of preceptors of Vaasthu. Bhrugu Samhita, the first treatise on Vaasthu refers to Kasyapa Silpa, as the earliest book on Vaasthu.

In Agama Sastra, the science relating to the construction of temples, Vaasthu is considered as the basis for any type of construction. Vedavyasa in his Mahabharata the great epic, had mentioned that the root cause of the great battle, Maya Sabha, the royal assembly, was built by Maya, the divine architect, in the shape of a perfect square with the circumference measuring 10,000 cubits, as per the tenets of Vaasthu.

The history starts with the civilization of man. The civilization had commenced with the construction of houses cities, and mansions. Hence Vaasthu happens to be the basic element of civilization. The excavations at Harappa and Mohenjodaro indicated amply the influence of Vaasthu on Indus Valley Civilization.

In 5th century A.D. during the time of Varahamihira, the Brahma Vaasthu Sastra was said to be in vogue.

The development of Vaasthu in India as tradition can be traced in three regions viz. Vesara Desa, Dravida Desa and Naga Desa. Vaasthu propounded by Maya, the divine architect, was in vogue in Vesara Desa i.e. the land between Vindhya mountains and the rivers Krishna and Tungabhadra. Vaasthu enunciated by the saint Bhrugu was adopted in Dravida Desa comprising South India. Vaasthu preached by saint Kasyapa was widely followed in Naga Desa i.e. area between Vindhya mountains and Himalayas.

Water sump in east and eastern northeast – Pumps the health into house, abreast.

GLIMPSES OF ORIENTAL VAASTHU LITERATURE

From the time immemorial the science of Vaasthu has been considered as a performing art and is practised in different parts of India. According to modern historians Ferguson, Havell and cunning Ham this science has developed during the period of 6000 BC to 3000 BC. As it is purely a technical subject it was confined only to the architects (Sthapathis) and handed over to their heirs through oral education or hand-written monographs. The principles of construction, architecture, sculpture etc., as enunciated in the epics and treatises on temple architecture, have been incorporated in the science of Vaasthu. From ancient literature it is clear that the science of Vaasthu was treated as the science of construction of temples and royal palaces. In Amarakosa, the Sanskrit dictionary, written by Amara Simha and also in the epics like Mastya Purana, Skanda Purana, Agni Purana, Garuda Purana and Vishnu Purana etc., the principles pertaining to the science of Vaasthu had been enunciated. Apart from the above, literature relating to the schools of Vaasthu propounded by Maya and Viswakarma, the divine architects, had also been enunciated.

1. BRUHATSAMHITA: (The Great Celestial science)

Varaha Mihira wrote this during the regime of the Guptas. This treatise is written systematically in lucid style. It contains the measurements of stories or floors in a building, differences in the types of buildings and the characteristics of idols.

2. VISHNU DHARMOTTARA PURANA :

The origin of this epic can be dated back to 7th century AD. It deals with basic principles of the subjects Vaasthu, sculpture and painting.

Underground water tank in north and northern northeast- Is a

3. **VISWAKARMA VAASTHU SASTRA :**

The period of its emergence is vogue. It deals with the construction of buildings both secular and religious apart from sculpture. It is considered to be an authoritative treatise on Vaasthu, a social subject.

4. **SAMARANGANA SUTRA DHARANA :**

This book was written by the King Bhoja in 11th century AD. It deals with temple construction, idol fabrication, art and painting.

5. **APARAJITA PRUTCHCHA :**

It is said that this treatise came to light during 12th century AD. In this book secular architecture, religious architecture sculpture, dance and music, are dealt with in the form of a dialogue, between Viswakarma, the divine architect and his ideal daughter, Aparajita.

6. **JAYA PRUTCHCHA :**

This is the oldest treatise on Vaasthu available in South India. It covers the techniques of construction for residential and ballistic purposes. However the available portion is considered to be incomplete.

7. **PRAMANA MANJARI :**

This was written by Sutradhara Mallu in 12th century AD.

8. **VAASTHU SASTRA :**

This was written by Sukhananda Yathi in 12th century AD.

9. **VAASTHU RAJA VALLABHA :**

This was written by Mandana Suthradhari in 15th century AD alongwith other books like Vastu Prasada Mandana, Vaasthu Mandana, Kodanda Mandana etc.

10. **SILPA RATNAM :**

This is written on sculpture in 16th century AD.

Storing water in southeast in a tank above the ground – Evolving peace and prosperity around.

FORGOTTEN FACTS

History reveals that our ancestors have unravelled many mysteries of the universe. "*Maha Sankalpa*", the great preface to the vedas, says that innumerable planets are revolving in the universe.

Arya Bhatta, the great astronomer in the court of the Guptas, discovered in 475 AD that the earth is rotating around its own axis. However the credit of establishing the above fact unfortunately goes to the western scientist Copernicus who propounded the same fact in 1543 AD. Not only Aryabhata, even the Telugu Pandits knew it before Copernicus, i.e. before 1543 AD. It is a well known fact, that Telugu pandits also knew that earth is round and revolving, even in 10th and 11th century A.D.; That is four or five hundred years before, when Copernicus established it in 1543 A.D., later.

The fact is quiet evident through Andhra Mahabharata written by Nannayabhatta, the poet in the court of Raja Raja Narendra, (1022-1061 A.D.) a king of Chalukya dynasty, who ruled Andhra Desha from Rajamahendravaram (Rajahmundry in A.P.).

The heavy rain poured upon with thunder without clouds and the Earth revolved fast and faster, alongwith great oceans and heavy mountains, when Sishupala, the Chaidya, was slain and fell upon the ground. Andhra Mahabharata, Sabhaparva canto 2. Poem No. 70.

Yudhishtira, the eldest Pandawa, was rebuked by Shishupala, for his act of paying tributes to Lord Sri Krishna as the Lord of Raja Suya Yaga, though Duryodhona, the eldest Kavurava, become silent on the advice of Bheeshma. Sri Krishna, bounded with his word to his aunt, pardoned Shushupala his hundred rebukes, and forged his Chakra (the disc) upon him, which devered his head from his body, at once. When the heavy body fell upon the earth

Storing water in tank above the ground in south and west- Hoisting the flag of peace and rest.

 it revolved fastly, with topmost velocity or some thousands of Rotations Per Minute. Nannaya described it as "DIRR, DIRR, DIRR" ... means a lot of speed super sonic speed.

Here it is to be known that a static heavy body will jerk when a heavy body falls upon it. But here it is described that the speed increased, that means the RPM of the rotating or revolving body was increased or say, the speed of movement / revolutions of earth increased, which is possible only with a body in action or in rotation, not with a static body.

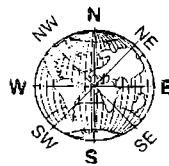

Hence it is established that the fact that earth is round and revolving, was known to Indians and even Telugus, long log ago or long before Copernicus.

Another example. This is also evident from the poem of Allasani Peddana, the poet laureate in the court Bhuvana Vijayam of Sri Krishna Devaraya (1509 to 1530 AD), the great and ace warrior and king of Tulu dynasty of Golden Age in South India. This is sung in praise of the king.

He says that Arjuna, lion, earth and Maheshwara cannot be equally praised with the king, as they have their innate natural defects i.e., eunchness, den-living, nonstability and baneful act respectively. Had it been otherwise they would have been equivalent to him and would have been appraised. Hence O! Narasimhakshitimanda-leshwara's son Krishnadwaraya you are unrivalled and unparallel.

1. Nara = Aujuna, 2. Simha = Lion, 3. Kshitimandala = Earth, and 4. Eshwara = Shiva, the four are punned in the name of Krishnadevaraya's father Narasimhakshiti mandales hwara. The above four had incurable innate unescapable natures, viz : 1. Arjuna, the ace archer of Mahabharata, though had much to his credit of wealth and weapons, had once played the unrivalled role of a dance master in the court of King Virata in Agnata Vasa period (The Life in Exile), was a eunuch. So he is not a

Water storage in southwest and northwest, above the ground – Blesseth with unique prosperity abound.

 perfect Man. 2. The Lion, though famous for his leadership and dignity has the defect of living in den, a place of darkness, void of publicity. This is an act of a coward - 3. The Earth is subjected to movability ie. she is going round her axis and around the sun. This she cannot escape : that is her inability. 4. Maheshwara, the great bestower of peace and prosperity, had indulged a great sin, the Brahama Hatya.

Once the fifth head of Brahama, the donkey head, laughed at Rudra, the fierce, at his nakedness, Digamabaram. He became angry and cut off the head with his right hand pointing finger. Since then it has become inauspicious to point at any infant, flower and tender leaf or fruit with that finger. Hindus donot apply bindi Kumkum to the forehead or the diety with that finger. Any how, after repeated entreaties made by Brahama, the Rudra accepted to beg alms and eat in that head - bowel. Thereafter Brahama has become Chaturmukha, four headed.

The main idea to be noticed here is Earth's, Chalana, movement. It was known to Telugu Poets, as well as to Telugu genteel and the clergy by 1500 AD. or even before that, too. But it is not brought to light and lacked propaganda . Many scholars of South India do not know this; a pity! Thus our learned people are forgotten and mistaken.

Our ancient texts describe that the earth is in the shape of a *Kapitha Fruit* (wood apple) because its rear ends are compressed inward. Our ancestors discovered that not only the Earth, but all the celestial bodies are also, round and rotating. But this, too, has been miscredited.

Our oriental treatises reveal, that earth revolves round the sun in an elliptical orbit, and the equinox on 21st March and 23rd September. The solar year is of 356 days, 5 hours, 48 minutes, 45.5 Seconds. The fraction is added after every 4 years, making a leap year of 366 days.

Storing water in southeast and southwest under ground – For prolonged illness and death, unsound.

The Vedas and the astrological treatises dating back to 3400 years, establish that the solar system comprises nine planets and the sun is its nucleus. They also mention that the sun moves towards north for six months and towards south for the next six months in a year and such movements are called the Uttarayana and Dakshinayana, respectively.

Varahamihira, another astronomer, belonging to the Gupta empire, had propounded in his Bruhat Samhita that the phenomenon of Ayanas in respect of the sun is governed by sun's entry into the specific houses of the Zodiac.

The sages of the Yajurveda Vedic period studied the planetary movement of the sun thoroughly and came out with the concept of "Zero month" in a year as the lunar month is of 29 1/2 days only an interval between two new moons; or 27 days 7 hours, 4 minutes 11.47 seconds; the time taken by moon to go around the earth and itself, being the same. So only one side of the moon is visible all the time. The same phenomenon is propounded by the western astronomers in a different form which came to be known as leap year concept in the Gregorian calendar, made in 1582 A.D. by Pope Gregory VIII. A Verdict throbbed upon the World!

The fact that "the basic component of the creative process is an atom", was discovered by the ancient astro-physicist "Kanada", (Kana, atom) but the credit of discovering the above fact goes to the Grecian scientist Democretes. The stages in the evolution process viz., Evocen Age, Ice Age, Halopen Age, etc., have been mentioned in our epics in the form of ten incarnations of Lord Vishnu, allegorically. Had it been otherwise, the scientific development and electronic discoveries such as super - computers wouldn't have been possible and the face of this civilized and novelised world would have been different, if the 'Zero' has not been propounded for mathematics, which lead to the electro-supersonic world of most complicated

Storing water in south and in west, below ground level – The death is upon the anvil.

machinery and discoveries in astronomy and various branches of physics - This is, because of the Zero, propounded by our well-known mathematician - cum - scientist - cum - philosopher, Aryabhata, after whom the Indian Space Research Organisation has named the satellites. How many Indian scholars know this, is a question - tag. Most wonderful thing is that this fact also has been magnified by the western - writers only; which made the Indian scholars wonder at their Past Glory!

Sir Jagadesh Chandra Basu, the brother of Subash Chandra Basu, had proved with experiments that the trees too are living beings, so do response to music and medicine. Had he been alive, it is said, for few years more, he would have proved that stones too 'Response'.

Ramnujam, a young mathematician had been famous for his long digital calculations, square and cubes etc.

Until sometime past, before the discovery of aeroplane, the Pushpaka Vimana of Ramayana was ridiculed,. But even after super sonics developments in science, the idea of Pushpaka Vimana, a choice of 'One' at every time, that means everfresh extension of one seat after all are full, is still a Dream. We hope it for the future.

The Astras (Agni, Vayu, Varuna, Naga etc.) of Maharabharata were ridiculed as sheer gamble - Now after the discovery of CBMs and ICBMs etc; the idea of such weapons has become and realised as a scientific truth.

The Evolution of Man has been and precisely narrated in Dashavataras of Vishnu (Ten incarnations of Lord Vishnu). But this, too, had been made fun of on the basis of "The Origin of Species", professed by Charles Darwin. Since the view of Orientalists differed to that of Westerns view, it was kept secret which made it to be a myth. This is not only known to others, but also made to study by a selected few. The bias of religious aristocracy, played a long part in destroying the scientific facts, by

In northern northwest and western northwest under ground water swamps-His the public relations and the power swamps.

hook or cook, or by alms or arms, which lead to the death of 'Natural Propriety'

In Devi Bhagavata, the ever Expanding Universe has been described, consisting millions of nebulae alongwith millions of Solar systems in galaxies. The Black hole also has been established, the Shoonya, towards which all the universe with its contents and components is moving in a super sonic speed. The basic reason behind these theories lying dormant is the selfish attitude of a few intellectuals, who had kept the knowledge for themselves and did not come forward to pass on the same to the posterity with bias of caste and creed, while the zealons were crushed down mercilessly, leading the sciences to fall and perish. Similarly the science of Vaasthu, has also been kept in dark for quite some time and now the time has come for all of us to study the science as a means to achieve universal peace and tranquillity. After all, it is our prime responsibility.

MODERN SCIENCE OF VAASTHU

The ancient version of the science of Vaasthu was confined to the construction of royal palaces, temples, fabulous edifices possessing steps studded with gems, pearls, diamonds and having gold plated keosks etc. We do not find references to the habitat of the common man, the reason being the inaccessibility of literature and science to the common man. But, since change is the law of nature, the concept of Vaasthu has also under gone a change over a period. With the advent of dempocracy in the place of dictatorship the royal palaces were replaced by the common dwellings. The life style of the common man became the cynosure of scientific pursuit and the efforts of research made by the modern Vaasthu scientist are mainly intended at the sophistication and comfort of human life; to meet the challenges of modernisation.

More open yard in east than in west – Showers glory and fame to males behest.

In olden days the arrival of a bride in a joint family was either hailed or deprecated, based on the developments that took place in the aftermath of her arrival. But nobody considered the issue from the view point of Vaasthu. Generally the establishment of a new family necessitates certain structural changes, like construction of a separate bedroom, bath room, toilet, and a new hearth, so as to suit the new couple. Such sort of changes do effect the Vaasthu potential of the house either favourably or adversely. Due to innocence or ignorance of the people of yore the credit or blame used to be passed on to the new entrant into the family.

Just as man had migrated from a mysterious world to a mechanical world, Vaasthu had also diverted its attention from artistic architecture and gorgeous construction, to the all comfortable abode of the common man. Modern Vaasthu is a synthesis of oriental values and modern concepts with the ultimate aim of promoting human welfare and universal peace. As an author of this book, it is my earnest desire and ardent longing that the science of Vaasthu should gain international recognition as a means to achieve world peace.

WHETHER THE SCIENCE OF VAASTHU IS BELIEVABLE ?

Before discussing the issue whether the science of Vaasthu is believable or not, let us examine the characteristics of a science.

Science is a creative and cumulative record of observations and experiences based on original facts of truth; to read, to experiment and to practise. That is why sciences are to be experimented and practised, not just read and lodged.

Characteristics of a Science : Any science possesses the following characteristics.

More open space in north than south – For the spouse, bring in health and wealth.

1. **Rational** : Based on cause and effect.
2. **Practicable** : Capable of being put into practice.
3. **Permanent** : Not bound by the barriers of time.
4. **Normative** : Codified and governed by principles.
5. **Utilitarian** : Useful to the society.
6. **Universal** : Acceptable and accessible to one and all.

Let us see whether Vaasthu, has got all the above mentioned characteristics, so as to be termed as a science.

1. RATIONAL : Vaasthu is a systematic study of the geological impact of the rays of sun on earth. The geological conditions caused by the above impact, prove to be congenial for the construction of an ideal house. The above fact is amply proved by the fact that the residents of the houses possessing projections towards east, north and northeast tend to lead prosperous lives, while the residents of houses having wells or pits in southeast, southwest and northwest often face worries and troubles. Since Vaasthu reads the characteristics of the houses and explains their effects on the inhabitants in a scientific manner, we can undoubtedly say that Vaasthu is a science.

2. PRACTICABLE : Vaasthu is practicable, as it is capable of being experimented. Those who want to construct a house, can follow the characteristics of an ideal house prescribed by Vaasthu and lead carefree, happy lives therein. What all they have to do is, to follow the guidelines prescribed by Vaasthu, in providing doors, windows, hearth, well, bathrooms and toilets. Further, the above characteristics can be utilised for rectifying the existing houses, which are not built as per Vaasthu, and reap the advantages.

3. PERMANENT : The effect of Vaasthu is permanent. This is so, because of the binding between the earth and Vaasthu.

More open place in west than east – Suppresses the capabilities of male to the least.

The earth has been revolving round the sun, in a geostationary orbit for over 460 crore years. Its due to and into it the magnetic effect caused by its rotation. Due to the magnetic properties of earth, the magnetic needle of a compass always tends towards north. Since Vaasthu is based on the permanent property of the earth, the effect of the principles of Vaasthu also becomes permanent.

4. NORMATIVE: Vaasthu prescribes certain rules and regulations, which are governed by the principles based on geological conditions and the inalienable properties of the earth. For instance, sinking of a well in northeast, elevation of plot in south, are the norms prescribed by the Science of Vaasthu.

5. UTILITARIAN: Any science which is not beneficial to the humanity, becomes useless. Man continues to work for the invention of the items, which render his life happier and happiest. Similarly, the sole aim of Vaasthu happens to be to make the lives of the individuals on earth, more and more comfortable, through habitability.

6. UNIVERSAL : The genesis of the science of Vaasthu lies in the tie between the earth and the sun. Since these two planets are of universal nature i.e. beyond religion, caste, nationality etc., the science of Vaasthu which studies their impact on human beings also becomes universal.

Since Vaasthu possesses all the aforesaid essential characteristics of a science, it can very well be termed as a science.

Science is an ocean and research is the exploration of that ocean to find out the hidden treasures or facts. Placing barriers of any kind, on a developing science, is totally unwarranted. Occult sciences like Astrology, Palmistry, Numerology, to some extent, can prognosticate the future of an individual but cannot change his destiny. Similarly the fate of a man cannot be altered

In south more open yard than in north – Is the root cause for all kinds of dearth.

by using talismans, or, by pacifying the baneful planets through offerings. But construction of houses as per Vaasthu or altering the existing ones to suit the norms of Vaasthu, are much more easier methods to pave way for a happy living.

A house constructed as per the principles of Vaasthu will definitely yield good results and leads to the happy living of the inhabitant, while a house built casually without following the tenets of Vaasthu, results in a great misery and unhappiness to the inhabitant. Since the science of Vaasthu is secular and universal, it does not distinguish between the users according to their caste and creed. Just as light, heat, space, water and nature do not place any restriction on their users according to their caste and creed; since the fire burns the Brahmin and Chandala, equally, the science of Vaasthu also, throws open its tenets to the humanity at large, to be utilized without any distinction of caste and creed. That being the case the question "whether the science of Vaasthu is believable", is well answered, because of its universal efficacy.

CONSTRUCTIVE CRITICISM

It is said of the modern science of Vaasthu that it is critical of the ancient version. But the real fact is that, the modern science of Vaasthu is rational and accepts only those principles or tenets, which yield to reason and logic and are based on cause and effect. There are certain inconsistencies in some modern Vaasthu literature, but they should not be condemned wholly.

For instance, the entire Vaasthu literature as well as the epic Mahabharat written by the sage Vyasa certify, that a land which is a square in shape, is ideal for the construction of a house. But, the Mahabharat written by the poet Nannaya in Telugu, describes the Maya Sabha, the court built by the divine architect Maya, as round. It is a question to be pondered upon.

No open space in northeast - Amounts to suffocation in the chest.

Similarly Astrology too consists of certain incongruities which are not acceptable to modern logical Vaasthu. For example, if a family comprises ten members, their individual horoscopes reveal their respective destinies. But the power of a house properly built as per Vaasthu, is beyond horoscopes and applies equally to all the residents. Any deficiency in a house can be rectified by effecting certain modifications, but how the deficiencies in a horoscope can be rectified through offerings to the baneful planets, is very much astonishing, for, the planetary movement is beyond human control. But it is true, that health and wealth can be restored with rectification of the baneful parts of the house. By saying so, the modern Vaasthu does not belittle astrology, but only tries to expose the selfish motives of a few individuals, who fish in troubled waters by exploiting the weaknesses of the common people.

Another instance of such incongruity can be seen in the calculation of Ayanas, signifying the movement of the sun towards north or south. When the sun enters Makara Rasi, a house of the Zodiac, it is termed as Uttarayana and when he enters Karkataka Rasi, another house of the Zodiac, it is termed as Dakshinayana. The same fact is confirmed by Bruhat Samhita, the great celestial science written by Varaha Mihira. After deep study of the fact, we can find that by the time of Varaha mihira, the entry time of sun into Makara has been delayed by 6 steps, Padas, to Vedanga Jyothisha period, i.e. 1500 years back. So it has been, certainly, delayed more, in our modern times, says Sri Malladi Suryanarayana Shastri. Further in Andhra Vignana Sarvaswamu, written by Komarraju Lakshmana Rao, it is stated that the Uttarayana begins from the third pada of Moola. Even then, the oriental astronomers and almanac writers still hold on to the argument that the Uttarayana, northward movement of the sun, starts only on January 14th. But according to our ancient astronomers, who have clearly denoted the point when sun enters

The house built in intermediate directions with equal open space in southeast and northwest – Hails the name and fame of the family all

 into Zodiac, for Uttarayana, the actual northward movement of the sun starts on 21st December itself in Mesha. But that our astronomers still consider it as 14th January, is to be pondered upon.

Another school of astronomers totally overlook the movement of the sun and compose almanacs based on solar system or lunar system or Barhaspatya system, without any consideration to the starting point of sun for Uttarayana.

Similarly the introduction of the concept of leap second in 1972 and in 1995 where by the standard times are adjusted or stopped for half a second and one second respectively during the zero hour, seems to have escaped the attention of our traditional astronomers. However the occurrence of a total eclipse once in 18 years has been widely accepted by our traditional astronomers, of course, with no scientific or primary knowledge but a simple experience.

Above all, modern Vaasthu believes in science and takes into account all its inventions and discoveries i.e. telescope and microscope etc. unlike the traditional school, but simultaneously preserves the heritage of the findings of the oriental astronomers like Aryabhatta and Varahamihira.

It is often asked that, whether the construction of a house as per Vaasthu really makes the inhabitant a millionaire and provides him health, wealth, prosperity and long life. It should be realised that wealth, prosperity and longevity are relative terms and are not subject to the law of Diminishing Marginal Utility. Hence it should be realised that, a house perfectly built as per Vaasthu, however small it may be, makes the inhabitant lead a relatively better life amidst prosperity and good health. It is quite ambitious or irrational to think that every ordinary man residing in a dwelling built as per Vaasthu becomes a multi-millionaire or a Prime Minister or a centenarian.

To the house built in inter direction with Southwest more open than in northeast direction – Leads the host towards alround perfection.

It should be borne in mind that health is wealth and any dwelling, which gives wealth but causes illhealth to the owner or to his family members, is not preferable. Further it should be realised that installation of certain mystic devices like Sri Chakra or Mastya Yantra in a house in order to attract riches is not a plausible proposition. For instance, let us take a living example of the alleged installation of Sri Chakra by Sankara charya of Kanchi in two places viz., Tirupati and Srikaalahasti, to attract devotees as well as riches. While the former has become the greatest pilgrim centre, attracting millions of devotees and billions of money, the latter could not become such a pompous and popular pilgrim centre. But the science of Vaasthu explains this phenomenon in a scientific manner and states, that Tirupati became popular only on account of the existence of a pond in the northeast and high hillocks in west and south, to the main temple whereas Srikaalahasti remained as an ordinary pilgrim centre, because it has hillocks in northeast and a river in west, both being negative features of Vaasthu.

Modern man has been striving very hard to explore the mysteries of the universe braving many odds. He is not deterred by the setbacks in the process of research and is determined to conquer the nature facing all odds with restless zeal. But modern Vaasthu says that desire to conquer nature remains only a Utopean concept and the best way to get benefit out of nature is to follow its basic governing principles. It should be realised by the modern scientists that it is literally impossible to gain control over all the five elements or nature. The best way is to fall in line with the order of the nature and reap the advantages.

The secret of success of Vaasthu is nothing but designing the habitats as per the tenets of natural order, by conquering the five elements in a positive way for peace and prosperity of the mankind.

Annexion of eastern plot – Appreciation of glory and wealth a lot.

ASTROLOGY - A CONTENTION

The Andhra Bhoomi almanac relating to the Telugu Year Prabhava contains on page 115 a brief procedure for choosing a particular town or village for the construction of a house by an individual. It says that the name of the proposed place (village/town/city) of construction should be more compatible with the name of the person or builder rather than with his natal star. The compatibility is determined by the relation between the first letter in the name of the place, its governing star, its place in the Zodiac and the person governed by the star based on his general name. Astrology, no doubt, reveals the twelve features of an individual and his life pattern in the past, present and future based on the planetary movement. But it cannot transfer a planet from one house of the Zodiac to the other. Hence astrology remains as a speculative science rather than a result oriented subject. Some selfish individuals are cheating the gullible public by subverting the tenets of the great science of astrology.

Further it prohibited the construction of house starting from the middle of the town, Meshans (Aries people) towards North ; Kumbhans (Acquarias people) towards north east ; Vrischikans (Scorpio people) towards east ; Meenans (Pisces people) towards southeast ; Kanyans (Virgo people) towards South ; Kartakans (Cancer people) towards south west ; Dhanus ans (Sagittarius people) towards the west ; Tulans (Libra people) towards west ; Vrishabhans (Taurus people) Simhans (Leo people) and Makarans (Capricorn people) in the middle of the town.

For example : There is one lady by name Lavanya, of Ashwini star, Mesha Rashi. Name of the Village, Vijayawada, of Rohini star, Vrishabha Rashi . As the difference of Ashwini and Rohini is four houses it is laudable. Mesha to Vrishabha, two

Annex not the southeastern plot - Tribulate not the troubles on spot.

houses, this too is laudable. But in Vijayawada constructing of house from the middle of it towards North, is prohibited. Hence, when Lavanya cannot construct a house in Vijayawada centre or towards north, it is absurd, to think, that there is no one residing in Vijayawada north, in any house bearing the name of 'La'. It is needless to say that such kind of phenomenon is obscure ; because many such persons are residing happily in those areas in prosperity and peace, too.

The above almanac on P.No. 116 describes the personification of Vaasthu, the Vaasthu Purusha, in the following manner. " In the first quarter of the day he lies down horizontally, placing his head towards north, feet towards south and faces east. In the second quarter of the day, he places his head towards east, feet towards west and faces south. In the third quarter of the day he places his head towards south, feet towards north and faces west. In the fourth quarter of the day he places his head towards west, feet towards east and faces north. The foundation be laid near the navel of Vastu Purusha.

1. Since Vaasthu Purusha faces south with his head in the east, from Bhadrapada to Karteek month, one can construct house in these months, facing east with western door and facing north with southern door.
2. In Marga, Push and Magha the head of Vaasthu purusha will be in the south, facing the west. So a house facing south with northern door or facing east with western door can be built.
3. In Phagun, Chait and Baisakh, Vaasthu Purusha will face north with head in west. Hence western house with eastward doors and southern, with northward doors can be constructed .
4. In Jyesht, Ashadha and Sharavan the head of Vasthu Purusha would be in north, facing east. These months are

In south, do not annex a plot – Lest your protection, may become naught.

favourable for the construction of northern house facing south or western house facing east.

Vysakh, Shravan, Karteeq, Marg, Magh and Phalgun months are auspicious for the construction of house. God knows, what they mean !

Only the wise can reflect on this logic. Modern Vastu after keen observation and experimentaion has propounded laws that the house be constructed in line with the order of nature and conquering the five elements will reap advantages for prosperity and longevity. But, what avails with the stature and nature of the Vastu Purusha, who changes sides in every three months ? What is the efficacy of his head and face on the construction of the house ?

It will be a matter of consideration, if some one is dare enough to pronounce the favourable effects of house, constructed in accordance with the afore - said conditions, logically and scientifically and enjoyed such and such advantages. It does not enjoyed reflect any rationale.

In Martanda Purana land of color, scent, taste is assigned according to the caste. For a Brahmin a land, white in color, sweet in taste and ghee in scent is recommended; for Khshatriya, red, colored, pungent tasted and blood scented; for Vyshya yellow colored bitter taste and food scented; for Shoodras black colored, decocaion tasted, wine scented; while mixed color, taste and scented land is recommended for Sankara people. Does, Sankara means the offspring of a noble to a casteless? But it is irrevocable fact that Sankara people are well- to - do, in these days; while the noble have turned into anti - social. This caste and creed licensing will prove fatal to the developing nation at large. Here, it will not be out of concern, if the sayings of Vemana are quoted; that how he criticised the unwanted-caste and creed phenomenon.

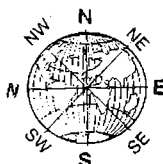

Annex not a plot in southwest though gifted - Do not allow your joy get drifted.

Unchastity is nothing but Ignorance.

Annexing the plot in west – Putting the health under test.

*Thus the Celestial people call him
The Brahmana, the wise acknowledged.*

The modern social reformers had sacrificed their lives for the cause of humanity ; but never did they enflame the loath-some idea of cast and creed. It is noteworthy, that they are all brahmins.

We hope that people will follow and encourage the rational, result oriented practical science, Vaasthu , which endows peace and prosperity to all mankind, with no prejudice or difference unto any community / society, what so ever ; and condemns the idea of a particular type of land to a particular caste, which is redundant in this age of electronics.

COMMENTARY ON THE CONCEPT OF AAYAM (DIMENSION)

The development of science instilled scientific temper in the individuals and made them bid adieu to superstitious and redundant customs. The scientific temper is slowly dispelling the innocence, ignorance and fanaticism which are deep rooted in our society. For instance the practice of conducting a ritual involving a sacrifice and the extensive use of neem leaves to drive away cholera is slowly fading away in our villages. While the use of neem leaves as an insecticide to drive away cholera, is accepted by the scientists, the act of sacrificing innocent animals like goats, fowls, or sheep to propitiate the so-called evil powers, has been widely condemned. Thus in every field of life, crept in a bit of inanimity alongwith magnanimity. Similarly in the oriental science of Vaasthu too, the anomalistic concept of Aayam or dimension had crept in and gave it a mystic touch.

The dictionary meaning of the word 'Aayam' in Telugu includes vital force, vital organ, dimension, measurement, relevance in a question, ornament, income, profit, stable and maid custodian

Annexing the site in northwest – Losing the peace of mind and rest.

of haram. In Vaasthu jargon Aayam is the product of the length multiplied by the breadth of the central portion or the cardinal area (Garbha) of the house. This concept has led to the belief that the Aayam or dimension of the central hall is the sole determinant of the health, wealth, prosperity and longevity of the household. Thus in course of time the belief has become a custom.

Garbha basically means the place between four walls of the house. This is the middle zone of the shala / house of the central portion or the cardinal area. Some exponents of Vaasthu opine that the cardinal area should be measured excluding the width of the walls while others include it, while some others hold that it should be the area between the centre points of width of the opposite walls. Now a days the varying measurements of walls from 24 " to 18 " or 16 " and even in brick 14 " / 9 " too, have added a little more confusion to the already confused concept of Aayam.

It is said that while calculating Aayam the basic yardstick should be the cubit of the owner or that of his first better half or that of his eldest son or atleast that of the mason. Here the question arises whether the dimension calculated in such a flexible manner would really yield desired results as per Vaasthu? Further it also leaves a doubt that, if the cubit of any person is sufficient for the calculation of Aayam, the concept becomes arbitrary and might not yield expected results.

Aayam is classified into eight types based on the remainder after applying the following formula,

Aayam = Length of the house x Breadth of the house x 9/8.

If the remainder is 1, it is called 'Dhwajaayam' (Sovereign dimension), if it is 2, it is called 'Dhumaayam' (Smoke or Exhaust dimension), if it is 3, it is called 'Simhaayam' (Leo dimension) ; if

A plot in north most preferred – Prospers in all the tasks ventured.

it is 4, it is called 'Shwanayam' (Dog dimension), if it is 5, it is called 'Vrishabhaayam' (Taurus dimension), if it is 6, it is called 'Kharaayam' (Donkey dimension), if it is 7, it is called 'Gajaayam' (Elephantine dimension) and if it is 8, it is called 'Kakaayam' (Crow dimension).

Now the question arises, as to the mode of determining the dimension, if the remainder is zero. It stands still!

Following table, shows the effects of various types of dimensions mentioned above :-

1. *Dhwajaayam* (Sovereign dimension) : Augurs well and envisages financial fortunes and victory.
2. *Dhumaayam* (Smoke or exhaust dimension) : Envisages ill health of the male head and that of his better half.
3. *Simhaayam* (Leo dimension) : Propounds victory over enemies and envisages health, wealth and prosperity, and makes the man, invincible.
4. *Shwanaayam* (Dog dimension) : Envisages ill health and bad omens.
5. *Vrishabhaayam* (Taurus dimension) : Augurs well and envisages financial fortunes.
6. *Kharaayam* (Donkey dimension) : Envisages nomadic life and casualties.
7. *Gajaayam* (Elephantine dimension) : Illuminates the life of the household with health and wealth.
8. *Kaakaayam* (Crow dimension) : Causes sorrow to the household and shatters peaceful life.

Oriental treatises on Vaasthu suggest that the toilets

Acquire a plot in northeast – Obtain prosperous life and feast.

should be constructed in the east following Dhwajaayam, kitchen in southeast following Dhoomaayam, bed room in south following Simhaayam, armoury in southwest based on Shwanaayam, dininghall in west based on Vrishabhaayam, cattle shed in northwest based on Kharaayam, treasury in north based on Gajaayam, prayer room in northeast following Kaakaayam.

From the above it is evident that the concept of Aayam is applicable only to mansions and royal palaces and not to the ordinary residential houses. It is so because various types of aayams derived their respective names of animals from the view point of their utility in a royal palace. The stables for horses, dogs, monkeys, donkeys and elephants, and cages for birds were to be constructed according to their habits and ways of life or ferociousness etc., ofcourse a sturdy and strong one for elephants.

There exists certain heterogenity regarding the concept of Aayam among the oriental texts on Vaasthu. Sage Vasista holds that the concept of Aayam is not applicable for houses, having area between 11 Yavas (8 yavas = one inch) and 32 cubits. But constructing house in such a small area lies beyond our imagination. Similarly 'Vaasthu Chintamani' an oriental treatise exempts, houses having dimension below 16 cubits and above 32 cubits, from the concept of Aayam. Another treatise 'Muhurta Marthanda', says that the concept of Aayam need not be extended to all the four sides of a house and also to thatched huts.

Above principles of Aayam in oriental Vaasthu force us to conclude that the concept is not based on a sound logic, as it is full of exemptions and exclusions. It had not been established firmly whether, the concept of Aayam is applicable to normal domestic houses. Further the utility of the concept had not been proved for correcting the existing structures. Above all, the

Land in northeast lost – Bid adieu to riches fast.

 concept had become an impediment for certain individuals, who are desirous of constructing a house by making them ineligible for possessing a house, because of their horoscope.

Now a days we do not find houses built as per the concept of Aayam. Since it is not based on sound logic its continuance as an integral part of Vaasthu, becomes redundant. However, our research has proved that rooms of larger dimension in west and south, when compared to east and north are yielding better results ; the underlying principle being the capacity of western and southern parts to bear relatively more weight. We may conclude the discussion saying, that the result oriented logical principles can be relied upon rather than depending on abstract and heterogeneous concepts like Aayam.

VARGU (ETYMOLOGY)

The concept of Vargu (etymology) in Vaasthu has also become redundant, with the passage of time, because of its orientation towards royal palaces and mansions. The life of the oriental man was governed by chantings composed of the letters of the alphabet. But in course of time, the importance of chantings was superseded by scientific temper and rational outlook.

The concept of etymology in oriental Vaasthu had classified the consonants in Telugu alphabets into five divisions and named after the first letter in all the five divisions Ka, Cha, Ta, Tha, Pa, i.e. Orientalists considered the first letter of the name of the person, constructing the house, for the purpose of arriving at "Aayam". Further three more divisions viz., Ya, Sha and Aa have been added. The following method has been suggested for finding out Aayam.

Cellar in the east and eastern northeast – Is a bountiful chest.

	Elephantine			
Donkey	PA	YA	SHA	Crow
Taurus	THA		AA	Sovereign
Dog	TA	CHA	KA	Smoke
	Leo			

As per this method the first letter in the name of the person constructing a house decides the dimension depending on the division to which it belongs and the directions there of, shown in the table. For example persons belonging to SHA group, should build houses based on the dimension indicated by that particular group in northeast, while persons belonging to KA group should build house, based on the dimension indicated by that particular group in southeast. The irony of the above theory would be that individuals are forced to construct houses as per the dimension determined by the first letter of their natal or general names and will have to face the consequences through out their lives. The above theory did not gain currency, as it is prescriptive rather than rational, and made Vaastu, incogruous science.

THE NORTH POLE

The dawn of civilization touching its new horizons with the electronics, computers and technocracy to make this earth a Heaven of life and comforts. But this is only a beginning when compared with the past and the unknown future.

We are living in the Age of Electronics and Motors, and moving towards a New Era of Great Change.

In this technical age of automatic machines, multi-storyed buildings are being constructed with the help of new technology of engineering and heavy and huge cranes and machines. But

Cellar in the south – Lessens the life line beyond synth.

our forefathers had built long long ago the great monuments of huge size i.e., temples, forts, palaces, and many such buildings before these creanes and motors etc.,were invented.

The great builders of the past had taken the sun as their Guiding Star. They had ear-marked the North Pole, with the help of the sun and built the monuments with perfection, as the north direction had been established as statuary direction.

In 1200 Bc in Egypt 16 km. away from Cairo, the Great pyramid of Gaza, had been built in line with the north pole. Similary the Taj Mahal in Agra and Lord Sri Venkateshwara's temple at Tirupati in Andhra Pradesh are also built with north pole conviction.

For the last hundred years many additions are made to the temple of Lord Venkateshwara of Tirupati against the tenets of Vaasthu. The history stands as the testimony that many of the old monuments were built with the North Pole concept.

In ancient days the compass was not available. In the night in line with the eye and pole star, two sticks were fixed in the ground and the north was established with the straight line drawn between the sticks. Another method of sun is also in vogue taking his north and southward mevement into account and the direction of sunrise.

It was a well known fact to the ancestors, that the sun would be straight on the head at Midday or on equator on 21st March and 23rd September which is called equinox, when the day and the night would be approximately equal i.e., 12 hours each. They developed a method with this special factor of the sun to establish the North.

On 21st March in the morning a stick was fixed on the ground in the sun and a circle was drawn with the help of a rope, making the stick its centre. The circle, at 6 or 7 a.m. was marked, towards west, at the point where the shadow touches it. Similarly

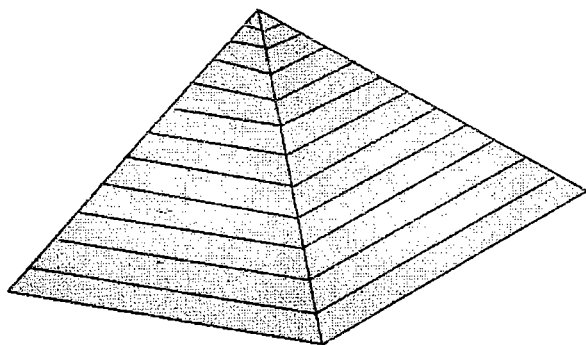

Cellar in the west – Never ending struggle with the worst.

 at 4 or 5 p.m. when the shadow touched the circle towards east, the point was marked on the circle and a straight line was drawn through these points of the circle. That established the east and the west. A perpendicular line was drawn to it through its mid-point, which established the north and the south. Thus they confirmed the four directions correctly. this method developed gradually to invent compass.

Many a great monument or construction has been accomplished with this method. But, now - a - days, the layouts are made scarcely considering tenents of Vaasthu, making the people to bear the vicious fruits of it. Hope, the future will be bright with compass and the pole star.

THE PYRAMIDICAL CLINICS

The wonderful inventions what we observe to - day are not unknown to our ancestors. They knew more than we think, that we know, rather they were more conscious

about nature and its secrets or wonders. We are on the other hand, a bit poor in making or knowing the wonders of the nature.

In olden days, when there was no existence of cranes and motors, heavy loads such as tonnes of stones were lifted up on to

Cellar in the north and northern northeast portion – Proves for women to be a lucky adoration.

 the top of temples, monuments or great buildings, not only on the ground, but also on top of the big hills. We donot know how the great stones of Puri Jagannath temple, weighing nearly 80 to 100 tonnes, were placed on top. Similarly the temple at Mount Abu, Khaj Rahoe and so on. Modern technical knowledge will stand amazed at Gomatheshwar, world famouse monolithic statue at Shrawana Belogola Rock hill. How the pillar of iron near Kutub Minar at Delhi, is standing without rust for the last 500 years, is yet to be discovered. What is the secret of colours of Ajanta scenes i.e., how they are made or mixed? what are their ingrediants? -still a puzzle.

Pyramids are one of the great monuments built with superb tenchnology. They are built on the tombs of Phoeras and other kings and queens near the Nile river about 4000 years ago. They are among seven wonders of the world.

The pyramids are the living examples of Vaasthu. It is a monument of four angles with superb natural power within. Hence the dead bodies of kings and queens are still fresh, without any sign of decay, even after thousands of years. To-day what ever may be the fact, the pyramids are the great architechtrual embodiments of science of Vaasthu with paramedical power.

Clinics are run at Coimbatoor in such pyramids, where in the patient is made to rest for half an hour. The results are encouraging, as they are built to top with North Pole. For better results, it is necessary that the surroundings also prevail as per Vaasthu.

In our research and observation, we noticed that the pyramid of Spiritual Society of Kurnool is built according to the tenents of Vaasthu, but the surroundings of it are lacking Vaasthu. Mainly the west is low, the open space in west is more than in the east, there is a gate in eastern south east. Above all it has street thrust in eastern south east. These amounted to the vicious and

Opening eastern door at down – Acquiring health as a boon.

 malicious effects of Vaasthu. On the other hand, if the mistakes of Vaasthu are rectified, it will be more useful to the humanity. This is the urgent need and call of the hour.

The eastern direction of pyramid denotes light; the south cold; the west, darkness and the north, warmth. There is a lot of hidden scientific knowledge in it, observed the scientists. The experiments proved that the food - stuffs will prevail fresh in pyramids for many days. Even grapes, too, were tasty as they were, though they became dry. The milk, water, coffee, wine, fruit Juice, seeds saplings and blades were fresh as ever, even after a number of days. So the pyramids are of great importance and power, has been acknowledged and established by the scientists.

Bearing with the facts, it is the earnest need of the hour, that pyramids are built in all government hospitals to treat the poor/noble patients with less expenditure and more hygenically with general medicine alongwith pyramidal treatment.

If the patients stay in the pyramid for half - an - hour or one hour, daily, it will cure paralysis, cancer, mental as well as nervous diseases and many other disases, too. The treatment would be cheap, quick and long losing. It will cure also dislocation of bones and muscles; itches, migrain headache, blood pressure, and contagious diseases. It bestows the patients to live a long and healthy life with strong and sturdy body, as it will prevail upon blood cells and nerve centres alongwith the different parts of the body.

If the government come forward to built such hospitals, the pros and cons of site as per Vaasthu will be established, free of charge, by my team of engineers. If such pyramidal clinics are built at Erragadda in Hyderabad, Mental Hospital at Vishakapatnam; it will be a great humanitarian service unto the poor and the disabled, physically and mentally.

Doors in east and north bring in pure air in the house – Help the lineage proper and bloom like a summer rose.

The wise and the government should think over it, for the betterment of a great number of needy people. It is our long cherished desire.

PRINCIPLES OF COUNTERPOISE

It is really interesting to note that there is a set pattern in the physical appearance of a living being or a creature. For example human body consists of various parts like head (one part) trunk (2 parts) and hands and legs (4 parts) in the ratio of 1:2: 4. Same is the case with any creature. Any variation in the above set pattern or ratio results in physical or mental disability. Then it is out of one's imagination, that how it will work ?

Our ancestors designed our dwellings as per a set pattern depending on the convenience of the inhabitant and as per the properties and efficacy of various directions. Just as any variation in the set pattern of human body makes it disabled, any change in the ideal measurements or dimensions enunciated by Vaasthu, results in ill effects and inconveniences.

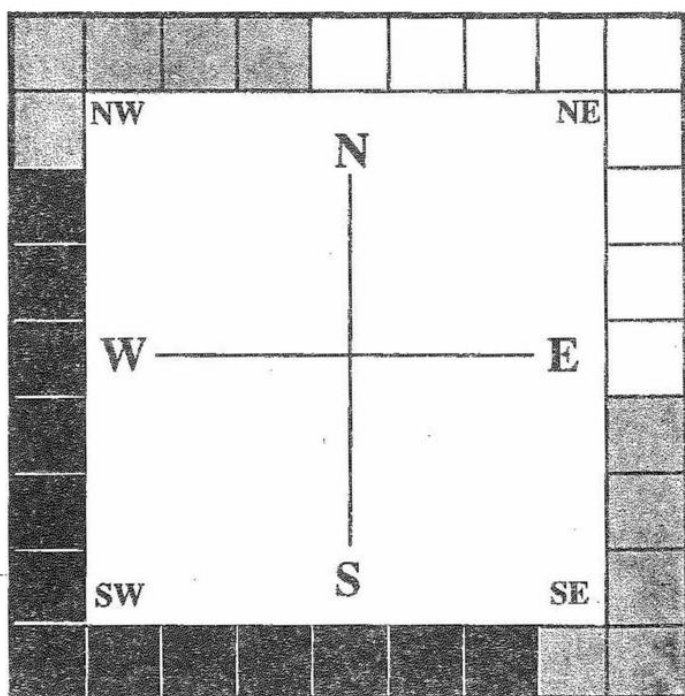

It is said that rooms in eastern and northern part of the houses should have smaller carpet area than those located in western and southern parts. This is so because, the directions east, north, northeast and northwest are not susceptible to heavy loads, whereas west, south east and southwest are capable of bearing any amount of load or weight. In fact heavier the rooms are the pleasant and luxurious the life would be. Similarly the lighter the rooms in east, north, northeast and northwest the happier the inhabitants would be.

The northeastern part is very delicate and sensitive. The inhabitant should take meticulous care and caution regarding the northeastern part. In each and every room and compound one should ensure that no pressure or load, even a light feather

Eastern entrance - Is a bountiful concurrence.

is placed in that direction. Then it will ensure blith and bliss in our lives. Otherwise it will make the life of the inhabitant miserable. Any amount of load can be placed abutting the walls in southern and western southwest.

- HEAVY LOAD
- LIGHT HEAVY ARTICLES
- KEEP VACANT

Heavy articles can be placed abutting southern southeast wall. But, no article should be placed abutting eastern south east wall. To ensure better results heavy articles like almirahs, safes,

Door in eastern southeast – Endangers health and leads to theft and unrest.

 tables, sofasets etc., should be arranged in southern or western southwest. Arranging sofas, tables and almirahs etc., abutting south and west part of walls is, welcoming a pleasant and happier life.

Above principles of counterpoise, are equally applicable to a house or a hut or a palace . The results are consistent with the location of the load. This phenomenon is quite analogous to that of a bullock cart or a boat where counter balancing is vital. If the balance is lost, the results would be disastrous. Hence the principle holds good for the house, too.

SITES

A street is comprised with the houses constructed on either side ; and a group of streets / roads will make a village / town / city. To build a house in accordance with the streets a place is selected, which is called site in Vaasthu.

It is better to select a proper appropriate site with the help of the learned people, than to go as per Aayam. Some people do run to the Vaasthu pandits, when they have completed the house to the basement level / roof level, instead of doing so in the beginning itself. This is like beating the husk

It is not enough just to select a site ; but the surrounding environmental phenomenon should also be studied and be taken into consideration. The hills, valleys, rivers and tanks exist naturally. They may be utilised in the best way scientifically, by falling in line with their order and reap the advantages.

It is always advisable to select a square or a rectangle shape of land. The east - west - ward length should exceed the north south - ward length. It augurs well. As much spacious as the site is, so much the happiness and prosperity would be. It is not

Entrance in southern southeast – Helps the female spouse almost.

advisable to select a site, which is cut off in any direction.

The Vaasthu scientists have ear-marked the sites according to its geography, shape and natural phenomenon, which are called blocks.

EXTENSION AND CONTRACTION OF SITES

While discussing the issue of extension and contraction of sites following points should receive due consideration.

Extension : Extension of western northwest is allowed as per Vaasthu, provided it extends as a perfect square or rectangle to the original plot at 90° and not as a diagonal, increased from southwest towards northwest.

Such extension is permissible as far as the site is concerned and not for the house. Extension of western northwest of a house makes the western northwest heavier than southwest, which is a negative feature as per Vaasthu.

Similarly southern southeast can extend in respect of a site and not in respect of a house. If a house has an extension in southern southeast, the southern southeast becomes heavier than southwest, which is a reactive feature as per Vaasthu.

Contraction : Contraction of eastern southeast of a site is permissible and not that of the house. Contraction of eastern southeast of a house increases the vacant space in southeast, when compared to northeast, which again is a negative feature. Similarly contraction of northern northwest of a site is permissible and not that of the house.

Contraction of northern northwest in a house increases the vacant space in northwest, when compared to northeast, which is a bad feature as per the tenets of Vaasthu.

Southern entrance – Showers fortunes in abundance.

HOW TO SELECT A SITE FOR THE CONSTRUCTION OF A HOUSE

It is always better to consult an expert on Vaasthu before selecting a site for the construction of a house to reap the best advantages out of the proposed house. It is always advisable to go in for a site which is either a square or a rectangle in shape. A spacious site makes the inhabitant rich provided that it is a perfect square or a rectangle. It should not be contracted in any direction.

It is advisable to acquire an additional site located towards the east or north of the existing house. Any amount of investment for acquiring a plot situated towards the northeastern part of the existing plot, is not a bad investment. The topography of the plot reflects on the life of the inhabitant. Slope towards north or east showers bountiful blessings on the inhabitant. Similarly elevation in land in the western and in southern parts of the site makes the life a prosperous one. People residing in such sites do achieve greater things. It is always better to select a spacious plot so as to facilitate construction of as many rooms as one can do.

A plot located at the confluence of two roads leading to east and north, straight without turns, respectively makes the life of the resident a pleasant one.

If the plot is situated in conformity with the compass the house constructed, thereon also should be set as per compass. However any deliberate attempt to adjust the house as per compass, leads to directional dead-lock, because it results in extension of southeast, southwest, northeast and northwest. Hence if a site does not fall in line with compass, the house can be constructed consistent with the adjoining road and the neighbouring houses. That is why a site possessing a straight and a parallel road according to the compass must be

House with a door in southern southwest – More frightful for woman's rest.

 preferred. However, a plot lying by the side of a road leading on increasing northeast, is said to lead the destiny of the occupant for a brighter tomorrow. The prosperity and progress in the life of the resident of a plot is directly proportional to the elevation in the western and southern parts of the plot.

One should never select a triangular site. Just as it is difficult to change the properties of the soil, it is also difficult to change the properties of a site or a plot as one can't change a silk into cotton or vice versa. For instance, the existence of a high hillock in north or east; or the location of a tank or a river in west or south cannot be rectified. Similarly, one cannot change the direction of a road, which cuts across the northeastern tip of a plot. Further the existence of a small plot in between two bigger plots, makes the inhabitant lead a suffocating life just as a calf gets trampled between two fighting bulls.

Never select a site which protrudes towards northwest, southwest or southeast. If the vacant portion in a site is more towards south or west than towards north or east, it is advisable to separate the excess portion by means of a small wall or fence and a shed may be constructed in it, or the same may be disposed off.

If the road leading from your plot takes you towards east, north or northeast, it is said to be very auspicious. If that road leads you towards southeast or southwest it brings misfortunes to you.

Never think of procuring a site which slopes towards southwest. Ensure that the rain water or sewage water of neighbouring plots does not flow into your site from eastern or northeastern direction. People living in such houses cannot have even normal peaceful life.

Door in western southwest - Is more damaging to the life of the host.

It is a well - known fact that even a single step taken in haste by the pawn will end the play with helpless Shah and utter flap. In the same way a small error crept in the selection of the site or the construction of a house will lead to many troubles in future. So also the contraction or projection of directions, if not considered first, will end in chaos.

In chess the looser will be a single person. But in Vaasthu, a game of directions, if the error is not checked and rectified in the beginning itself ; it will bounce troubles on the whole household. Hence one should be cautious enough in selecting the site as per Vaasthu to avoid future misfortune, lest he will become " a Burnt Child "

ACQUISITION OF NEIGHBOURING PLOTS - TENETS OF VAASTHU

For one reason or the other, people purchase the plots in the neighbourhood of the house. One should be aware of the following tenets of Vaasthu, before acquiring the land / house.

Under any circumstances the house / plot, existing towards south or west must not be purchased; even it is for cultivation. As per tenets of Vaasthu, it is always laudable to acquire plot / house existing in north or east, at any cost, what so ever ; when all the directions are perfect. To get best of them, the following points may be borne in mind.

NORTHERN SITE :

1. If the existing plot / house is facing east, then avoid the plot / house in the north, which is elevated more than the existing one.
2. If the existing one has the street trust from eastern north east, and when it turns to unfavourable eastern southeast

Western entrance - Improves the householder's happiness.

street thrust after purchasing the northern site / house, in such case that plot / site should not be obtained.

3. If there is street trust from western northwest to the present house, and after the northward purchase, if it turns into unfavourable western southwest street thrust, then too, the purchase should not be done.
4. The northward plot / house should be acquired, only when it is correctly stands right in north east of the present house.

EASTERN SITE :

1. If it is more elevated than the present site, it should not be purchased.
2. If the street trust to the present house is from northern northeast, then after purchasing the eastern plot, it will change into northern northwest . Hence it must be avoided.
3. If the present house faces the southern southeast focus, after the acquisition of eastern site, it will turn into a debilitated focus from southern southwest. This will mar the tenets of Vaasthu ; as such it should not be acquired.
4. Only when the newly purchased eastern site / house, stands quite to north eastern site, then and there only it must be paid for and obtained, at once.

Hence, after due consideration only the neighbouring plots or houses / cultivation lands, should be purchased.

CELLAR AND ACQUISITION OF PLACE

Cellars are construtced in east and north in apartments or shopping complex ; leading the south and west elevated in resulting a best favour of Vaasthu.

Western northwest entry - Showers a series of glory.

In such a case, the site in north or east should not be acquired as it elevates north or east, because of the cellar in south or west of them.

If at all, it is necessary to acquire, that can be done after changing that place into a cellar ; which will bear lot of favours.

IDENTIFICATION OF BLOCKS

According to the Science of Vaasthu sites or plots fall into eight blocks depending on the location and the approach road in various directions.

1. **Eastern blocks** : The sites, having road only on the eastern side, in between the northeastern and southeastern blocks. There may be as many sites as can be.
2. **Southeastern blocks** : The sites having roads in east and south.
3. **Southern blocks** : The sites, having road only on the southern side, in between the southeastern and southwestern blocks. Number of such sites is not restricted.
4. **Southwestern blocks** : The sites having roads in south and west.
5. **Western blocks** : The sites, having road only on the western side, in between the southwestern and northwestern blocks. Such sites may be many in number.
6. **Northwestern blocks** : The sites having roads in north and west.
7. **Northern blocks** : The sites, having road only on the northern side, situated between the northwestern and northeastern blocks. There is no restriction in number.
8. **Northeastern blocks** : The sites having roads in north as well as in east.

Northern northwest entrance – Enhances instability and menace.

FIRST GRADE SITES

Sites possessing roads on all the four sides, with the roads in eastern and northern sides lower than the roads in south or west, with the northeastern portion projected, are called First grade sites.

Sites possessing roads in east, west and northern directions are also considered as first grade sites, provided the road in the western side is more elevated than those in east and north. Further if a spacious site protrudes into the street in northern northeast or eastern northeast such a site is also treated as a first grade site.

Sites belonging to northwestern block possessing roads in west and north projected towards north east, street trust in western northwest are also treated as first grade sites.

Similarly sites belonging to northeastern block which possess roads in east and north, (northwest block being your own) and the road on north is less elevated (than your land), are also treated as first grade sites.

The blocks with wide roads on north and east and with increased northeast protruded into street, are also treated as first grade sites. However if the streets located to its east and north are more elevated than the site, such a site would not be rated as a first grade site.

If the eastern road is more elevated than the site, the main entrance of the house may be fixed in north, provided the northern road is less elevated. If the northern road is high, the main entrance of the house may be fixed towards east.

If the main entrance has to be fixed as per the compass, only towards the road, which is more elevated than the site itself, the only solution left out would be to elevate the entire site more than the road.

Door in the north - Golden Gate to progressive path.

However in such case it is advisable to consult an expert on Vaasthu as he would be in a position to offer a better solution depending on the physical features and topography of the surroundings.

SECOND GRADE SITES

Sites possessing roads in east and west, with eastern road less elevated than the western road, are treated as second grade sites.

Sites possessing roads in north and south, with northern road less elevated than the southern road;

Sites having road in eastern side which is less elevated than the site and there are multistoried buildings in west and south;

Sites having road in northern side which is less elevated than the site and there are multistoried buildings in west and south;

Sites having roads only in north, south and eastern sides and the eastern or northern road is more elevated than the site;

Sites having the western road more elevated than those in north and east;

Sites having roads on three sides and the roads in east and north are more elevated than the site;

Sites having roads in east, north and west and the western road is less elevated than the plot;

Sites having roads in east, north and south with the southern road less elevated than the site;

All are treated as second grade sites.

Door in northern northeast – Enhances health of female and financial prosperity of the host.

THIRD GRADE SITES

Sites possessing less elevated roads in east and possessing multistoried buildings or hillocks in west, south and northern directions are treated as third grade sites. Further sites possessing roads in east and south, in such a way, that the eastern road joins the southern road and, the eastern road is less elevated than the site, such sites are also treated as third grade sites.

Sites having roads in three directions with high structures in east and north and, the street in west or south is lower than the site, such sites are treated as third grade sites.

Sites having roads in north and south and, the southern road is less elevated than the site and there are high structures in east, and vacant land in west, such sites are treated as third grade sites. Sites having roads only in west are also treated as third grade sites.

FOURTH GRADE SITES

Sites having roads in east and south with high structures towards east and north are treated as fourth grade sites. Sites having roads in west and south which are less elevated than the site and either east or north road is more elevated than the site, such sites are treated as fourth grade sites. Further, sites having road only in south which is less elevated than the plot and there is no vacant space either in east or north, such sites are treated as fourth grade sites.

Certain first grade sites sometimes may not yield the results expected of them. Certain third grade sites may yield the results of second grade sites. In order to find out the reason for such practical problems, a comprehensive study of the entire block and topography would be essential.

Eastern northeast door – Sanctions worthy children and fame adore.

EIGHT DIRECTIONS

The entire universe rests in an endless space which has no directions. The sun, the stars and several other planets like the earth and the moon are revolving and rotating in this ethereal space in their respective orbits, due to their own and other governing gravitational forces. Sun is a star closure to the earth and emits light and heat for the human and other living beings, whereby we are able to live and feel the presence and direction of the objects. When we face the rising sun, the facing direction is termed as East, behind us would be West, towards our left would be North and towards our right would be South: the four cardinal directions.

Apart from the four cardinal directions there are four intermediate directions or corners. An intermediate direction is formed when two directions converge and make an angle. viz., Northeast (Eesanya) in between north and east, Southeast (Agneya) in between south and east, Southwest (Nairuthi) in between south and west and Northwest (Vayuvya) in between north and west. These intermediate directions are more important in the sense, that they have in them the effects of both the directions, which make an angle in the formation of that intermediate direction. Hence the intermediate directions have more specialities than the cardinal directions.

Significance of Eight Directions :

As per the science of Vaasthu all the eight directions have their own respective influences on the human beings.

- (1) East is called the paternal side. If the vacant space in east is covered completely the house will become maleless property i.e. the male head of the family would die.

Exit in east to northeastern room – Showers upon the host a favourable boom.

- (2) Southeast (Agneya) begets health.
- (3) South brings prosperity, happiness and tranquillity.
- (4) Southwest (Nairuthi) is responsible for attitude, behaviour and mortality.
- (5) West brings progress, pomp and pride,
- (6) Northwest (Vayavya) governs relations with others which may vary from cordiality to hostility.
- (7) North is the maternal side. If it is not kept vacant the house will become a desert due to female mortality and remains as a house without a female member.
- (8) Northeast (Eesanya) ensures continuity of lineage through able male progeny. In case the northeast is cut off there can be no male children in the family, even though abundant wealth prevails.

A casual observation of all the eight directions reveals the effects on the residents of the house, as "Face is the index of the mind"

Each intermediate direction extends towards two directions of which it is made up of. Hence each intermediate direction is again subdivided into two parts.

The ideal shape of a plot or site is a square or a rectangle possessing four sides viz., east, west, north and south. Every side has two directions. In order to facilitate proper identification of intermediate directions each lateral side has been divided into nine equal parts.

The sun is the sole concern to this universe. The earth and other planets are rotating around the Sun. So the oriental scientists of Vaastu have evolved a formula to divide the sides of a plot into 9 parts in the concensus with nine planets. This is useful

Eastern exit to south eastern room – In debilitated position of the house, brings doom.

to point out the smallest part of the side. The other formula such as dividing the side into 3 or 4 parts are not so better than this formula. Thus it is useful to point out the place of the construction, a bit more precisely, than any other.

1. Two terminal parts of the eastern lateral side towards north make eastern northeast. Two terminal parts of the eastern lateral side towards south make eastern southeast, and the remaining five parts are to be construed as eastern portion.
2. Two terminal parts of the southern lateral side towards east make southern southeast, two terminal parts of the southern lateral side towards west make southern southwest and the remaining five parts are to be construed as southern portion.
3. Two terminal parts of the western lateral side towards south make western southwest, two terminal parts of the western lateral side towards north make western northwest and the remaining five parts are to be construed as western portion.
4. Two terminal parts of the northern lateral side towards east make northern northeast, two terminal parts of the northern lateral side towards west make northern northwest and the remaining five parts are to be construed as northern portion.
5. **Northeast** : Northeast is composed of four parts viz; two parts of the northern lateral side called northern northeast and two parts of the eastern lateral side called eastern northeast.
6. **Southeast** : Southeast is composed of four parts viz; two parts of the eastern lateral side called eastern southeast and two parts of the southern lateral side called southern southeast.

An exit to the southeastern room in southern southeast – Brings prosperity to women fast.

- *****
7. **Northwest** : Northwest is composed of four parts viz; two parts of the northern lateral side called northern northwest and two parts of the western lateral side called the western northwest.
 8. **Southwest** : Southwest is composed of four parts viz; two parts of the southern lateral side called southern southwest and two parts of the western lateral side called western southwest.

Thus various directions and intermediate directions are to be identified and ensured at perfect angles, right from the stage of excavation of foundation till the stage of laying roof, in order to reap the best results of the science of Vaasthu.

EXALTED AND EXIGUOUS POSITIONS

In Vaasthu jargaon exalted and exiguous positions mean favourable and unfavourable positions in a plot or house. It is always auspicious to know this, before the doors are fixed. In any plot the horizontal intersection of the eastern lateral side decides exalted and exiguous positions. The northern half becomes the exalted portion and the southern half would become the exiguous position. Similarly vertical intersection of the southern lateral side also decides exalted and exiguous positions. The eastern half becomes the exalted position while the western half becomes the exiguous position. Likewise horizontal intersection of the western lateral side too decides the exalted and exiguous position. The northern half becomes the exalted position while the southern half becomes the exiguous position. Lastly vertical intersection of northern lateral side also decides exalted and exiguous positions. The eastern half would be the exalted position and the western half would be the exiguous position.

Southern exit to the room in southwest – In debilitated position of the house, for woman folk its dreadest.

It may be concluded that northern northeast, eastern-northeast, southern southeast and western northwest are exalted positions, while northern northwest, eastern southeast, southern southwest and western southwest are exiguous positions, as shown in Vaasthu at a Glance P. No. 12.

1. **Eastern Northeast :** (Exalted position.) Since it is an intellectual position, people residing in a house possessing main entrance in eastern northeast, would become meritorious and brilliant.
2. **Eastern Southeast :** (Exiguous position.) Leads to bad consequences.
3. **Southern Southeast :** (Exalted position.) Yields general auspicious results,
4. **Southern Southwest :** (Exiguous position). Results in financial troubles and ill health to female members of the family.
5. **Western Southwest :** (Exiguous position.) Causes financial losses and deteriorates the position of the male head of the family.
6. **Western Northwest :** ((Exalted position.) Gives very favourable and auspicious results.
7. **Northern Northwest :** (Exiguous position.) Causes fickle mindedness.
8. **Northern Northeast :** (Exalted position.) Brings in windfall gains.

If the main entrance of a house is located in eastern exalted position, the furniture and other heavy fixtures are generally

An Exit in west to southwestern room, in debilitated position of the house – Health condition confusing for the spouse.

placed towards south. Such an arrangement paves way for northward movement and results in good fortunes.

If the main entrance is fixed in southern exalted position the furniture and other heavy fixtures would be placed towards west. As such east becomes light and gives favourable effects.

If the main entrance is arranged in western exalted place, heavy items or the furniture would be placed toward south and the north becomes light. Such a phenomenon yields good results.

If the main entrance is placed in northern exalted place heavier objects are kept in western part, making the east comparatively lighter. Such a situation augurs well.

Above description gives general principles governing the fixation of doorways. The effects of placing doorways in various exalted positions vary basing on the topographical characteristics of the house. Hence correct assessment can be made only by physical inspection of the house and its surroundings by an expert on Vaasthu.

ROOF LEVEL PROJECTIONS

Roofs are made of stones, earth, R.C.C. etc. Generally the roof level should be slanting towards east or north making the drain flow down in northern or eastern open area and then flow out thro' east / north / northeast. This is admitted, because it augurs well. Contrarily, if the roof levels are down towards west / south the whole process will become uncongenial. Hence the drains in south / west are prohibited. Rooflevel projection to a house facing west and south should be horizontal to or higher

Exit to northwestern room in west – Establishes name and fame,

 than the house roof level and in no case they should be slant in shape or lower than the original roof level of the house.

However, projections to the houses facing east and north should be slant in shape or lower than the roof level and in no case they should be higher than the roof level. The projections should emanate below the roof level. This will augur well and attract riches.

For the sake of spaciousness, people make slanting projections on any three sides of the house. They should be in north, east and south or in east, north and west directions. Instead of that if the projections are made towards east and south it will cause ill health to the women folk ; while projections in north and west will spoil the health of the male.

If the projection is on one side that is west or south it will cause ill health to men or women. If the projections are in west and south then the health of men and women of that house will be doomed.

If a house possesses a slanting projection in west, it should invariably possess a similar projection in east. Similarly if a house possesses a slanting projection in south, it should invariably possess a similar projection in north. Same principle is applicable in respect of straight projections also.

If the projection slopes merely towards east it yields positive results on the health of the male inhabitants, and if the projection slopes towards north similar effects are noticed on the female inhabitants. If the projections slope towards east as well as north, they will take care of the health of both the male as well as the female inhabitants.

Exit to northwestern room in north - In debilitated position, the peace of women folk is in dearth.

EFFECTS OF STREET FOCUS GOOD AND BAD

1. **Street trust in Eastern Northeast - Favourable.**

Proverb: Eastern northeast street trust - Improves power and authority of male host.

Mahankali Temple in Secunderabad, is one of the richest temples in south India, faces east and enjoys the patronage of millions of devotees due to the street focus in eastern northeast. It's a living example.

2. **Street thrust in Eastern Southeast - Unfavourable.**

Proverb: Street thrust in eastern southeast. Beats the sources of wealth and rest.

Eg: Bhagya Lakshmi Temple near Charminar in Hyderabad became the target of attack in ethnic violence in city during Nov, 1979, as it has street focus in eastern southeast, facing east on south east of Charminar.

3. **Street trust in Southern Southeast - Favourable.**

Proverb: Southern southeast street trust - Encourages the host towards financial crest.

Temple of Lord of Seven Hills at Tirumala in Andhra Pradesh, enjoys street focus in southern southeast, and the same feature is responsible for drawing millions of devotees and billions of money, as on eastern side of Vykunta complex there are steps for general public. This is one of the best features of Vasthu of this temple.

Northern exit to northeastern room - Engroves wealth like hilarious boom.

4. Street thrust in the Southern Southwest - Unfavourable.

Proverb : Southern southwest street thrust - Hits at the wealth and health of female most.

Street focus in southern southwest is considered unfavourable as it causes death.

Premier Studio at Mysore in Karnataka established on 14 acres of land has a street focus in southern southwest. The studio witnessed the worst fire accident in cinema history on 9th February 1989 when the teleserial Tippu Sultan was being shot, and resulted in the death of nearly 29 people on the spot, and 21 persons in hospital.

The cause of the disaster is street focus in southern southwest.

5. Street thrust in Western Southwest : Unfavourable.

Proverb : Street thrust in western southwest - Punches the destiny of male as a ghost.

Chenna Keshava Swamy Temple at Proddatur, an abode of poets, philosophers, artists in Andhra Pradesh, remains, even after 200 years of existence, as a poor endowment institution suffering from financial constraints. Surprisingly the Hanuman temple just a few yards away in west, from the above temple, enjoys lot of patronage due to the street focus in northern northeast. The efficacy of the Lord is indescribable.

The malady is because of street focus in western southwest.

6. Street trust in Western Northwest - Favourable.

Proverb : Western northwest street trust - Enthrones forward to be the leader of trust.

East to southern southwest movement - Is inauspicious to female inhabitant.

Lakshmamba Ammavari Matham, of a humane saint, at Adoni in Kurnool district of Andhra Pradesh, enjoys the patronage of thousands of devotees, because of the street focus in western northwest.

It has the main entrance in west, besides a door in exalted place in east. The favourable effect is mainly due to street focus in western north west.

7. Street thrust in Northern Northwest - Unfavourable.

Proverb : *Street thrust in northern northwest - Piercing lance to the pleasures of female most.*

Street focus in northern northwest is considered unfavourable as it causes financial trouble and renders the inhabitants issueless.

Eg : A famous philanthropist, charitable person Shri Budda Vengal Reddy of Vuyyalawada in Kurnool district of Andhra Pradesh was awarded a gold medal by Queen Victoria in 1876 for his yeomen service and charity gesture to the famine hit victims of Andhra Pradesh in that year. He was specially invited alongwith 500 native princes of India for the coronation ceremony of George VI. He was also given an authority letter to travel free of charge in Royal Railways.

Many folk songs are in vogue about Budda Vengal Reddy's yeoman service and charity.

A sample :

West ward in Vuyyalawada.

Prevails the Virtuousness !

Budda Vengala Reddy there abides

The only donor on the Earth.

East to western southwest movement – Bewitches the male host as agacani.

Brahmana, the poor, craved for whey

The second spouse said a 'Nay'

Reddy went in and found in there

Soard and unwanted whey.

Verily, Reddy thought it inhumane

Cow and calf so gave him, all alone.

Such and other folk songs, in praise of Reddy's name and fame can be heard in trains and buses in Rayalaseema, as his virtues enthrobs their hearts with gratitude.

But such a noble man died issueless inspite of having two wives, only due to the street focus in northern northwest to his house. Though he lived long as a great doner, he, at the end, suffered with wantenness. However the reason for his opulence and fame is that there are four streets in four directions of his house. The Science of Vaasthu says that the various directions yield riches, fame, power, health and longevity, respectively, in their order, but the northern northwest focus prevailed above them all.

The habitat of Mother Theresa in Calcutta and palace of the Maharaja of Mysore, possess streets on all the four sides and, have become world famous.

8. Street trust in Northern Northeast - favourable.

Proverb : *Street trust in northern northeast - Enhances avenues for female happiness the richest.*

Prashanti Nilayam, the holy abode of Sri Satya Sai Baba is located at Puttaparthi in Anantapur District of Andhra Pradesh. It has the street focus in northern north east which is responsible for drawing millions of devotees and billions of money and spreading the name and fame of Baba, throughout the world.

Doors from east to west in line - Ushers precious glory to the host benign.

But, an unimagined great disaster will fall upon the Nilayam, because of (1) construction of the compound wall with eastern southeast projection ; (2) construction of rooms on eastern end ; (3) the northeast is covered and cut off ; (4) the eastern southeast of Babas Mandir is covered. It has come true on 6-6-93, when a lady, 4 devotees and 2 guards were killed : the worst disaster !

Street focus is a common phenomenon in all villages, towns and cities. People should exercise care and caution in selecting plots in a layout, so that ill effects of street focus can be avoided and can be obtained favourable street focus.

GOOD AND BAD EFFECTS OF HOUSES PROJECTING INTO STREETS

An ideal layout presupposes broad streets between two opposite rows of houses. All of the houses, on both sides, are not built at a time. Some one constructs his house first in the lane. Later on, other people, due to some or the other reason, construct their houses a bit back ward ; making the first one projected into the street. Such a phenomenon subjects such houses to street focus from both the sides. Sometimes the street focus proves to be very beneficial while sometimes it leads to catastrophe.

The good and ill effects of street focus in various directions are discussed below :

1. If a house facing east projects into the street, it attracts street thrust in northern northeast and southern south-east. This is a good feature.
2. If a house facing south projects into the street it attracts street thrust in eastern southeast and western southwest. This is a most dangerous feature.

Movement from east to western northwest – Causes illness to the whole family aghast.

3. If a house facing west projects into the street, it attracts street thrust in northern northwest and in southern-southwest. This is also a very dangerous feature.
4. If a house facing north project into the street, it attracts street focus in eastern northeast and in western-northwest. This is a very benificent feature.

From the above discussion, it becomes clear, that the houses facing north and east, be constructed in such a manner, so that they can project into the streets slightly, when compared to the other houses, so as to gain the positive effects of street focus. The effect of favourable street focus can be experienced on the financial plane, physical health and social status of the inhabitant. It must be however remembered that the street focus acts in the above cases as a positive catalyser only when other features of the house are in conformity with the science of Vaasthu.

Under no circumstances the houses facing west or south should project into the street. Hence such construction must be avoided, lest it will lead to dire consequences.

INFLUENCE OF ROADS

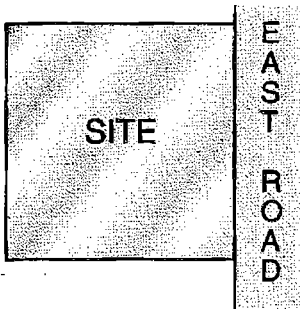

Number of roads around the house and their formation, cast a powerful influence on the inhabitants, and lead either to their prosperity or adversity as per the science of Vaasthu. A plot located at the confluence of two roads, is better, than the one, located by the side of a single road. Similarly, a plot located at the confluence of three roads, is better than the one located at the confluence of two roads. Same analogy applies in case of a plot located at the confluence of four roads and it is considered to be the best.

If a road is located either on the eastern lateral side or on the northern lateral side of a plot, such a plot is considered

Movement from eastern southeast to west – Leads the host to detriment.

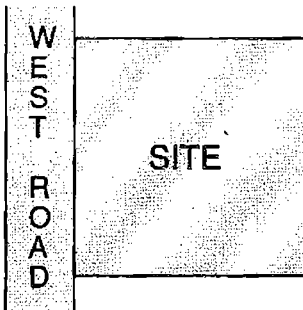

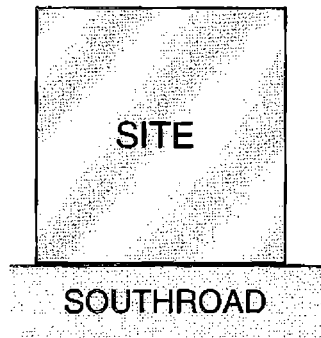

to be the best plot and the inhabitants are, the luckiest. If the road leads the inhabitant towards eastern southeast, the construction of a house in that plot doesnot bear fruit ful results. If it is done as per Vaasthu, it may angur well to some extent. One must select a plot possessing roads leading towards northeast, east or north. Such a movement leads the inhabitants towards a precious future. The science of Vaasthu prescribes that the roads must be spacious and full of traffic.

This is the site with the road in east. A gate in eastern northeast or in the exalted east should be provided in compound wall, to the house built in this site.

When a house is built in this type of site a gate in the compound wall be placed in southern southeast or in exalted south.

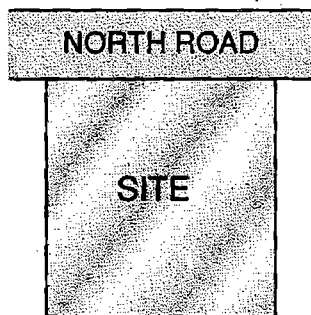

The house in this site be provided a gate in the compound wall in western northwest or in the exalted west.

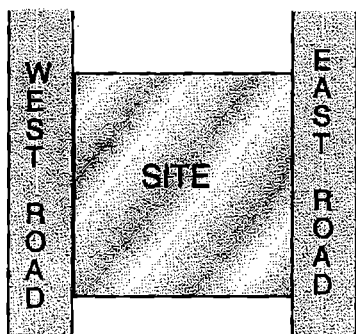

From southern southeast to northern northwest movement Causes quarrels and troubles every moment.

To the house built in this site, a gate be provided in the compound wall in northern northeast or in exalted north.

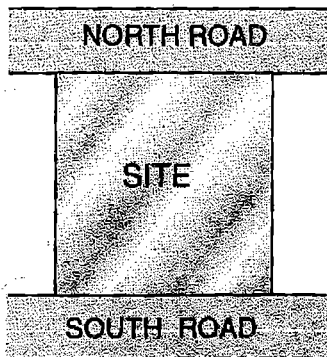

There are two roads to this site in the east and the west. house in this plot be built in southwest and it is a must that the gates be provided in western northwest, exalted west; eastern northeast

and exalted east of the compound. But a gate must be provided in eastern northeast quite opposite to the gate in western northwest. Instead when the gate is provided in exalted east the movements will be through southeast and northwest which will augur evil.

When a house is constructed in the site having roads in north and south, the gates must be put in the compound wall, in northern northeast, exalted north, southern south east and exalted south. But a gate in northern northeast

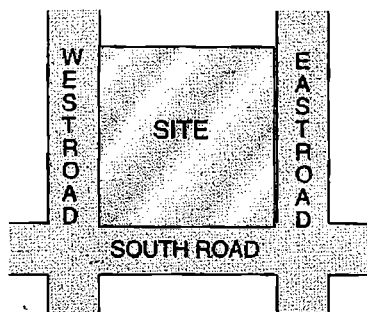

From southern southeast to northern northeast movement – Clares the house like a Dreaming Grove.

 mustust be provided infront of the gate in southern southeast; lest it may lead to disaster, because of the movements throuth southeast and northwest; due to the gate in exalted north.

The site has three roads i.e., in east, west and south. For this house the gates be provided in eastern northeast, exalted east, western northwest and exalted west; or in eastern northeast and southern southeast. Under any circumstances the gates be provided in west and south, but quite opposite

to the gate in western north west, a gate must be provided in eastern northeast. Instead, if it is put gate in exalted in east, their will be exiguous movements through southeast and northwest.

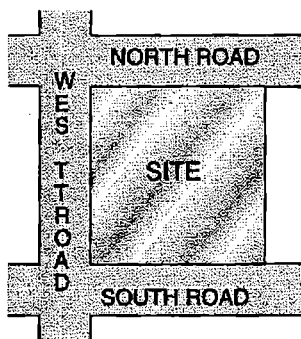

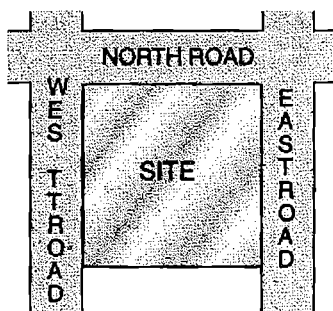

There are three roads in east, north and south to this site. When the house is constructed in this site in southwest the gates be provided in northern northeast, exalted north, eastern northeast and exalted east; southern southeast and exalted south. Quite infornt of the gate in southern southeast, a gate in northern northeast must be provided. Instead, if it is put in gate in exalted north, the movements through southeast and northwest will become disasterous.

Passage from south to northern northwest – Damages female character of the most.

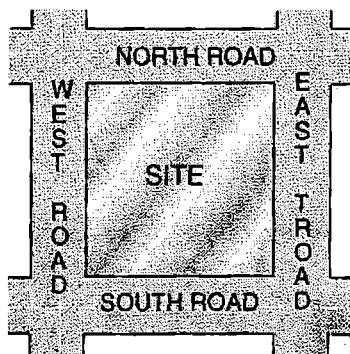

The roads are in north, east and west directions to this site. When the house is built in this site in southwest the gates be provided in exalted eastwest and in north i.e., in three sides. But a gate in eastern northeast must be provided, quite apposite to the gate in western northwest. Instead, if it is put in exalted east, the southeastern and northwestern movements will augur evil.

The site bears roads in north, west and south. For the house constructed in southwest of this site, the gates be provided in exalted north and south or in north and west. Gates in west and south are prohibited. In front of the gate in southern southeast, a gate in northern northeast also must be, provided; lest the movements thro southeast and northwest will lead to disaster, due to the gate in exalted north.

This is a gracious site having roads in four directions viz in east, south, west and north. The house may be built in southwest of the site. The gates be provided in three directions viz. exalted east, west and north or east, south and north. When the site bears with the compass the gates can be provided in all four directions in exalted positions.

South to northern northeast passages – Privilege to the women's enjoyments.

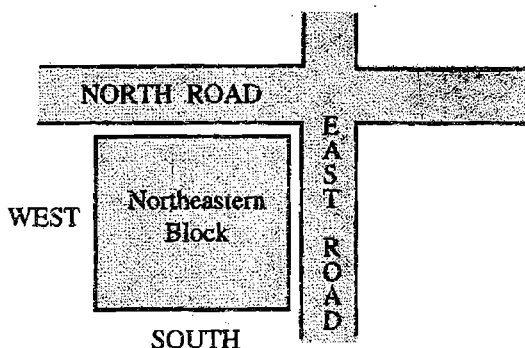

TABLE OF BANEFUL AND BOUNTIFUL EFFECTS OF THE EIGHT DIRECTIONS

Directions	Depression	Elevation
East	Wealth, Longevity and Fame	Loss of Progeny & spouses
Southeast	If lower than the southwest it augurs well, but if lower than northwest and northeast it results in fire accidents, rivalry and criminal bent of mind and also bad for women and male children.	If higher than southwest it is an ill omen. If higher than northeast and northwest it attracts riches and profits in business.
South	Diseases and financial constraints.	Prosperity and health.
Southwest	Vices, protracted illness and premature demise.	Prosperity and fame.
West	Loss of progeny and name causes ill health.	Increases fame and progeny.
Northwest	If lower than northeast it results in rivalry, litigation and diseases. If lower than southwest and southeast it augurs well.	If higher than northeast, it results in success in all issues and flow of wealth. If the north west is higher than southeast it is not a good omen.
North	Always augurs well.	Always austere.
Northeast	Draws riches from everywhere. Ensure health and popularity.	Makes the resident a pauper, by all means.

Passage to north and northern northeast from west – Assures success and victories at the best.

VIRTUES AND VICES OF NORTHEASTERN BLOCK

Sites possessing roads towards east and north fall under the category of Northeastern block. The sites falling under northeastern block have a bearing on the male head of the household and on the male progeny. Based on experience the science of Vaasthu construes this block as the best block among all the blocks, and compared with Alkapuri, the magnificent city of Kubera, the god of wealth.

Construction in the Northeastern Block :

Since the northeast occupies a prominent place among the eight directions, the builder has to bestow special attention in ensuring proper northeast, right from the beginning of the construction process. If the northeast is cut off, however perfect the other directions might be, the prosperity gets affected and leads to adversity. One cannot afford to compromise with a site possessing exiguous northeast, as it leads to adversity and frustration inspite of substantial earnings.

From west to eastern northeast movement – Bestows male progeny and intellectual development.

If the eastern road of a northeastern site is less elevated than the northern road, the main entrance of the house must face east. However if the site is inclined towards eastern southeast for more than 10 degrees as per compass, the main entrance of the house must face north, and gate should be placed in eastern northeast besides placing an additional entrance in east. The movements should be done through main entrance in north. A door in east is essential.

Similarly if the northern road is less elevated than the eastern road, the main entrance of the house should face north. However if the site is inclined towards northern northwest for more than 10 degrees as per compass, the main entrance of the house must face east and gate should be placed in northern northeast besides providing an additional door in north. The movements should be done through the main entrance facing east. A door in north should also be provided.

Right from the beginning of the construction it has to be ensured that the northeast is not truncated, or elevated or covered. Same principle applies to all the rooms in a house i.e., northeastern portion of every room should not be truncated or elevated or increased.

Features :

1. For a northeastern block main entrance of the house can face either north or east as per the inclination of the compass. However, the main entrance of the house should invariably be placed in northeast and must be kept open for common use, as far as possible.
2. Some people construct houses facing northeast deliberately, thinking that it augurs well. But such a construction has serious consequences in the sense, that northeast gets reduced while southeast gets extended. The

Movement from north towards south – Ushers immortal riches and growth.

fundamental issue here is that neither of the eastern or northern northeast should be truncated and not the house facing northeast. The northeast should not be increased while constructing the house. The projection of northeast to the site, as a whole, to some extent i.e. one or two inches, is admissible.

3. If the room located in the northeast of a house, has doors in west or south to enter, but has no doors in east or north for exit, and has verandahs in east and north it amounts to closure of northeast. Hence an extra door to the northeastern room of a house, either in eastern northeast, or in northern northeast, becomes essential.
4. One should never dispose off houses or vacant sites located to the northeast of the main house. It has to be ensured that the northeastern portions of the neighbouring houses located towards east or north should not have projections beyond our house in the northeast.
5. One should not keep any article in the northeastern corner of any room-even a feather, weight. No plants should be grown in the northeastern corner of the plot / compound, too.
6. Borewell or well must be sunk in the northeastern corner of the entire plot i.e. in the place towards east or north of the house. It is not just sufficient that the well is towards northeast of the house or out house.
7. Porticos with pillars should not be erected either in east or in north to the northeastern blocks. Eastern portico truncates northeast and southeast. A northern portico results in truncation of northeast and northwest. So they

Passage from north to southern southeast – Infuriate rivalries and unrest.

should be avoided. Hence, if a portico is felt essential, the same should be extended upto the northeastern corner of the house.

8. The northeastern corner of the compound wall should not be rounded. Generally such rounding off can be observed in case of plots located at the confluence of two roads. As per the science of Vaasthu, especially in case of sites belonging to north-eastern block, such practice is not advisable neither for the corner of the house nor the plot. It should be in perfect angle.

Positive Effects :

9. In case of northeastern block, if the roads in east and north are laid in such a way, that the northeastern tip of the plot is projected, the residents of such plot lead a fabulous life and their progeny would prove to be highly intellectual and possess moral and sacrificial values.
10. If the northeastern corner is properly aligned and, if there is more vacant space in east, when compared to west, and north and east are more sloped than south and west, respectively, the residents of such northeastern block enjoy royal pleasures for generations perpetually.
11. Existence of ponds, canals, wells near the northeastern portion of the house brings peace, prosperity and ensures continued lineage through able male progeny.
12. If the northeastern block has a street trust, in eastern northeast the residents would enjoy name and fame, and if it has street turst in northern northeast, the residents would enjoy perennial prosperity.

Passage from north to southern southwest in a house – Penetrates ill omens to the female spouse.

13. If the northeast extends towards east, it makes the residents rich, famous and just.
14. If the northeast extends towards north only the residents would no doubt be rich, but would be misers. If there is a projection in northeast, the residents lead prosperous lives for generations. In whatever direction the northeastern corner may extend, the people living in the house, would certainly reap good benefits only.
15. If the northeastern portion of the northeastern block is less elevated than the other portions, and if there are wells and ditches in northeast such a site ensures continuance of lineage and alround prosperity.
16. Of residential sites, of open space in the house, and in verandahs, if the northeastern part is lower than other directions, then the residents would lead prosperous lives full of pomp and pride with name and fame.
17. Slanting roof towards east of northeastern blocks, would prove beneficial for the male members of the family, and if it is towards north, it proves beneficial for the female members of the family .
18. It is advisable to acquire vacant land located towards northeast far or near of the existing plot and to construct a small hut or a habitation in its southwest after ensuring proper northeast to that plot. Such a construction and the adyard will drive away evils of the original house, if any, and perennially endow benefits only, when there is a thorough fare from the original residence to that adyard. An acquisition of other's land in northeast, for any cost, will prove most beneficial and blissful.

A house having yards in North and east – Adorns the spouse with fame and feast.

19. Waste water or sewage water should flow out of any room from the northeastern corner only. If the rain water flows out of the house or plot through the northeastern corner, it ensures around prosperity and continuance of lineage.
20. Extension of northeast, in whatever manner possible, is considered auspicious, but it is advisable to increase the northeast in the proportion of one or two feet only for every 100 feet, in order to reap the best results.

Negative effects :

21. If the northern lateral side is truncated to northeastern block and if the construction starts right on northern boundary, the female spouse of the house will suffer from chronic illness, leading to death or may lead frustrated life on account of severe financial crisis.
22. If the eastern lateral side is truncated to the northeast block and if the construction starts right on the eastern boundary, the male head of the family or the eldest son gets effected physically or financially as noted above, and the lineage ceases to exist beyond third generation.
23. If the east and north, are truncated due to topographical barriers, in north east, the residents of the plot, though rich, lead barren lives. Even if they adopt a male issue, the lineage would not continue, beyond third generation.
24. In case of northeastern block, construction of any structure in northeastern portion right on the boundary and truncated, or elevation of northeastern portion, results in adverse effects on the inhabitants.

A house with yards in south and north – Enhances chances for prosperous growth.

25. To the above phenomenon if there is an addition of pits or depressions in southwest the result would be disastrous unfortunate death.
26. Pials located in the eastern or northern part of a house falling under northeastern block should not be higher than the floor level of the house. Otherwise the male members of the house in case of eastern pials and the female members of the house in case of northern pials become the victims of the ill effects.
27. If the northern entrance is more elevated than the southern entrance, and if the eastern entrance is more elevated than the western entrance of the northeastern block, the ill effects are inevitable.
28. Of this block if the gates of the compound wall in east and north are more elevated than the floor level, negative effects would follow.
29. If the northeastern portion of the house or the plot is truncated the residents would not have male progeny or if at all there is, the progeny would suffer physically or mentally and would meet premature death.
30. Even though the northeastern part of the compound is proper, if the northeastern part of the house is improper, there is every likelihood, that the elders of the family may have to conduct the funeral rites of the younger ones.
31. If there are wells, pits or depressions in any part of the plot, except in the northeast, east and north, the residents of that house would suffer badly.

A shop facing south, better have an exit in north – To keep fit in all walks of life henceforth.

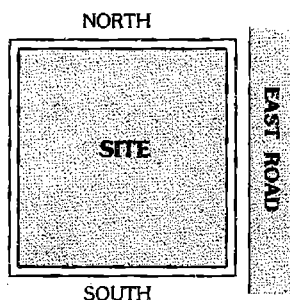

32. If the north eastern part is crooked, the progeny would be deformed or handicapped.
33. If the northeastern part is elevated, it leads to loss of wealth, and progeny and tremendous problems for the household.
34. Construction of hutment, shelter or room in northeast, abutting walls in east and north, results in loss of progeny and prosperity.
35. Location of garbage, heap of stones in the northeast results, in rivalry, premature mortality and criminal bent of mind.
36. Existence of kitchen in the northeast results in family squabbles and wealth will melt away like any thing.
37. Existence of toilets in the northeast results in family squabbles and criminal bent of mind and chronic diseases.
38. Even if the house and the plot are in consonance with the science of Vaasthu, but if the streets located towards east and north of the site are more elevated than the house, the habitants would not get desired fair results.
39. To a northeastern block if the street located towards the east does not extend towards north, but takes a turn towards west, or if the street located towards north turns towards south, such streets do not offer completely the positive effects of a northeastern block.
40. If the northeastern part of the plot is improper as described above, against the tenets of Vaasthu, the south western part would also be improper and vice versa.

A shop facing west, better to have a door in east – It condemns forlorns to make the best.

VIRTUES AND VICES OF EASTERN BLOCK

The sites belonging to eastern blocks have a bearing on the male progeny.

Features :

Research on science of Vaasthu has established that the residents of the houses having vacant space in east and north will

be very prosperous both in health and wealth. The science of Vaasthu is yet to attain the stage of standing the test of precision like any other science. In fact there is a great dearth of research scholars in the science of Vaasthu. Hence it is difficult to precisely prove the influence of Vaasthu in every case. A casual observation of the plots or houses having no open space in east and north but in west and south will reveal the status of the residents clearly. The Japanese who are the inhabitants of the land of the rising sun are known for their intelligence, studiousness, unity and pose a challenge to the entire world in the fields of technology and scientific development as they are the first in eastern hemisphere to see the dawn, and rightly named as people of Rising Sun. It shows clearly the power of sun and its rays.

Positive effects :

1. If there is more open space in the eastern portion of the site, the residents of the house would be prosperous and their lineage would continue through able male progeny.

A door to the east is a must – Lest it drag away the life of the host.

2. If the eastern portion is sloped either in the site or in rooms or in the projections and balconies, it augurs well as it better health and wealth of the inhabitants.
3. If the main entrance or other entrances face east, it is considered auspicious. If they face northeast the feature ensures continuance of lineage, peace, prosperity and sound financial position.
4. If the house facing east does not possess vacant space in north, the northeastern structure at the north end will prove beneficial. If the northeast is truncated for that house, the house located to its south or the houses located there after, will prove beneficial inspite of some defects. If the neighbours located to our east construct their house right on the compound wall, a separate compound wall has to be erected at a distance of 3 inches from that wall of 4 inches width, upto a hight of four feet. Never be a room in east be used as a kitchen.
5. Even if the house facing east occupies the entire plot besides the road in the east and if there is no vacant space in north with an adjacent building in south the house proves to be beneficial to the residents provided the house adheres to the tenets of Vaasthu. The lesser the elevation of the house in the east, the more would be the name and fame of the host. Annexation of eastern vacant land yields health and longevity to the master of the house.
6. If the pials located in east, are less elevated than the floor level of the house, such a phenomenon yields peace and prosperity to the inhabitants.

Towards west, a door must be – Lest it mar the life of she.

- *****
7. Slanting projections in east shower bountiful blessings on the male members of the house by giving them health and fame. The houses possessing RCC roof must invariably have a balcony of two to three feet width in east as well as in north which will yield vacant place in east and north of the house. In south and west such a balcony is not necessary.
 8. If rain or sewage water flows out of the house towards east, it makes the male members of the house physically strong.
 9. If the compound wall in east is lower than western wall, or of same height, it augurs well.
 10. Well, borewell, septic tank in east, yields good results.

Negative effects :

11. If the eastern portion is more elevated, the head of the family would suffer from poverty, and their progeny would suffer from chronic illness or they may become mentally retarded.
12. If the construction starts right on the eastern boundary leaving vacant space in west, such a situation results in loss or absence of male progeny. The survivors may become physically or mentally handicapped.
13. If the main entrance or any other entrance in east faces southeast, it results in poverty, court litigation, robbery or fire accidents.
14. If the pials in east are more elevated than the floor level or plinth of the house, such a feature leads to the absence of peace of mind, financial losses and indebtedness of the household.

A site, set to compass may have doors in NEWS a-mass – Begets the house hold into a benovolent class.

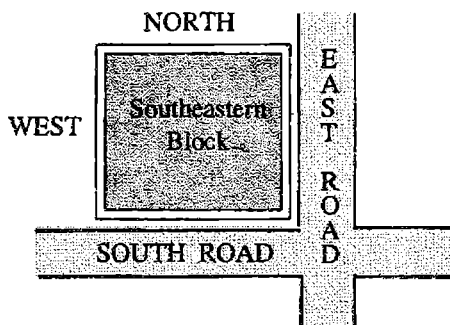

15. If the house facing east is constructed right on the eastern boundary leaving low lying vacant space in west, such a house leads to the premature death of the male members of the family on account of chronic diseases.
16. Location of garbage or heap of stones or mud or dung in east leads to loss of wealth and progeny.
17. If the house facing east is constructed right on the eastern boundary with a slanting roof - level projection towards west, it will cause eye diseases, chronic illness and paralysis.
18. Those who wish to let out a portion of the house must reside in the exalted portion i.e. east or north and let out the exiguous portion i.e. west or south. However in case the portion let out is vacated the house owner should immediately shift some one into exiguous portion or if none is available, he should shift himself into that exiguous portion otherwise the exalted northern portion would become heavier and problematic.
19. The compound wall of a house facing east should not be higher than the main entrance of the house i.e. the main entrance of the house must be visible to the passer by. Otherwise it leads to disaster. If the compound wall in east is higher than the one in west, it results in loss of progeny.
20. If the house suffers from the defects of Vaasthu the inhabitants of the house viz., the landlords as well as the tenants, have to suffer equally.

*Prefer the bed in east on exigency - Enjoy sound sleep and boon
bonjour.*

VIRTUES AND VICES OF SOUTHEASTERN BLOCK

Features :

A site possessing roads in east and south is termed as a southeastern block. The sites belonging to southeastern block have a bearing on the female members and children and also on the second issue. This block is supposed to be endowed with lesser potential as per the science of Vaasthu.

Residents of the southeastern part of the villages or towns tend to be backward economically and physically than the inhabitants of other parts and generally suffer from illhealth and sufferings.

Notwithstanding the fact that the southeastern block belongs to an inferior grade of sites, it has the potential to offer the best advantages of other blocks, provided it is rectified and the house is erected, as per the tenets of Vaasthu. When the south eastern block consists many houses, the eastern part of the site will become exiguous. Hence it becomes a must to have doors and gates towards southern southeast, besides the doors and gates

Bed in southeast for the second – Enjoying feasts all the year round.

towards east. The doors and gates in southern southeast should be used frequently for all movements. Hence one must be very cautious while undertaking construction in a southeastern block, in order to reap the best results.

Features:

1. If the southern street is less elevated than the eastern street to a southeastern block, the main entrance has to face east. If the site is inclined towards eastern southeast by more than ten degrees the main gate of the compound wall should be erected in eastern northeast and the main entrance of the house should face north. Besides, a door must be kept in east.
2. Doors can also be fixed in southern southeast parts to this house.
3. Stronger trees like coconut, neem etc., can be grown in the area between southern southeast and southwest.
4. The rain or sewage water should not flow out of the house from southeast.
5. The southern corner of the compound wall can be rounded.
6. In case of factories, the electric transformers and boilers can be erected in the southeast in line with godown, in such a way, that there is a minimum distance of three feet between the eastern compound wall and the transformer. The boiler is generally established in south east. A chimney is also constructed for it. Though the chimney is higher than south west, it augurs no evil, because it is an essential construction.
7. If the construction of a toilet is done in the southeastern corner of the factory, it can be done by keeping a minimum

Bedroom in south – Ensures permanent good health.

distance of three feet from the compound wall in east, in line with the southern wall.

Positive effects :

8. Probable reasons for the congenial nature of a house belonging to southeastern block even if it does not conform to the tenets of Vaasthu are :
 - (i) Truncation of the northeast to the street in east of the houses located to the north.
 - (ii) Availability of lesser vacant space in south when compared to north.
 - (iii) Existence of lesser and more elevated vacant space in west than that of east.
 - (iv) Location of doorways in exalted positions.
 - (v) Placement of Intermediate directions viz., southeast, southwest and northwest at proper angles.
 - (vi) Northeast being properly, extended, with water - flow level and low.
 - (vii) Good street trust in the southern southeast.
 - (viii) Street trust in eastern northeast.
 - (ix) Northern portion of the plot is less elevated than the southern portion.
9. If southeast is truncated moderately, it yields good results, but the truncation should not be unreasonable.
10. If the main entrance of a house faces south and if the house is constructed right on the southern and western boundaries, leaving vacant space in east and north, with a well or borewell in northeast, alongwith low lying space

Master's bed in southwest – Ensures success as the best.

in east and north than in west and south respectively, the inhabitants of such house would enjoy alround prosperity.

11. Location of kitchen in southeast brings wholesome bountiful results abundantly.
12. Location of toilet in southeast is advisable but cesspool must be located in the east or north.

Negative effects :

13. If the house constructed in southeastern block has an angular extention towards eastern southeast or southern southeast or if there are wells, pits or low lying areas in southeast, or if the construction of house is made unto boundary without vacant space in north, or if the vacant space in south is more than that of north or if there is a gate to the compound wall in southern southwest, or eastern southeast; or if the vacant space in west is more than that of east, such a house lands the inhabitants in court litigation, fire accidents, robbery, immoral character, indebtedness and ultimately it would be disposed off. Such a house might also become female property in most cases due to the absence of male progeny.

Same results would follow in case of the buildings where shops and business establishments are located in such places.

14. Street thrust in eastern southeast makes the male members degenerate and leads to the predominance of women over men.
15. Street thrust in southern southwest results in suffering to the female inhabitants involving lunacy, chronic diseases and sometimes, results in suicide also.

Bedroom in west - Is a safe sail for life earnest.

16. If the main entrance of a house faces south and the construction starts right on the eastern and northern boundaries, with up-stairs in the east, the head of the family would either face premature death or suffer from a chronic illness.
17. If the main entrance of a house faces south and if the construction starts right on the eastern and northern boundaries and if the movement is through eastern southeast, such a house lands the owner or the second issue in some troubles.
18. If the main entrance of a house faces south and the construction starts right on the eastern and northern boundaries, leaving a lowlying vacant space in south, and if there is a slanting portico or projection in south, such a house after making her a widow subjects the lady of the house to an incurable disease, and makes the off-springs vagrant.
19. If the main entrance of the house faces south and if the construction starts right on the eastern and northern boundaries, leaving low lying vacant space in west and if there is a well in the west and the west is lower than the east, such a house makes the owner or head of the family a chronic patient at a comparatively younger age.
20. If the main entrance of the house faces east and if the construction starts right on the northern and eastern boundaries and if there is an elevation or pial in northeast, the male head of the family would meet premature death.
21. If the main entrance of a house faces east and if the construction starts right on the northern boundary, leaving a vacant space in south and if there is a well in

For the third, bed in the northwest – Assures peace and prosperity abreast

southeast, the lady of the house would meet premature unfortunate death.

22. If the main entrance of a house faces east and if the construction starts right on the boundaries in east and north, leaving vacant space in west and south, in that house even the spouses would become archrivals and the children would become vile and sick.
23. If the main entrance of a house faces east and if the construction starts right on the northern boundary leaving vacant space in south and if there is a projection in southwest, the female inhabitants would meet accidental and unnatural deaths.
24. If the eastern road of southeast block does not proceed straight to north, but ends at that house, then that house augurs evil and becomes subservient.
25. If the main entrance of a house faces east and, the compound wall possesses another gate in eastern part of southeast, and if northeast is truncated and if there is a well in northwest, and if there is a slanting projection in western northwest, and if the western part is less elevated and if there is an entrance to the compound wall in southern southeast, the owner of the house would commit suicide inspite of a great scholar.
26. If the main entrance of a house faces south, and the construction starts right on the eastern boundary, leaving a low lying vacant space in west, and there is a well in the west, and if there is a street thrust and projection in eastern southeast, the lady of that house would manslaughter her husband and the lineage would cease there.
27. Doorways should not be fixed in eastern southeast and western northwest. Though the movements are through

Bedroom in north for the young – Paves way to success enthrong.

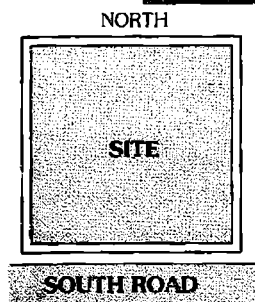

- exalted places; they make move towards south east and northwest. They encourage robberies and rivalries among the inmates of the house.
28. If eastern southeast projects towards east it leads to mortality of the male progeny and makes that house a female property.
 29. If southeast extends in an angular direction, it results in rivalries and ill health, court litigation and fire accidents.
 30. If southeast extends towards south in an angular direction it results in female illness besides rivalries.
 31. When there are no doorways towards east, and northeast to a room, placing two doorways in western northwest and southern southeast are bad, though they are in exalted positions. Only one door may be fixed, in any one of the above directions.
 32. If south and southeast are less elevated than northwest and north it results in vexation, ill health and indebtedness to the inhabitant.
 33. If the southeast is low and northwest and northeast are elevated more, it results in poverty and ill - health.
 34. If southeast is more elevated than southwest, it results in anonymity of that family and cessation of lineage.
 35. Well in southeast makes female inhabitants and children ill and leads to family squabbles and mortality of the second issue.
 36. If the main entrance of a house is in eastern southeast, it results in loss due to gullibility, fraudulent attitude, mutual bickerings between the spouses and unnecessary clamour for frivolous things.

Spouse sleeping in northeastern room – Invites deadly diseases and doom.

37. If the southeastern part of compound of a house or plot is less elevated on the whole and also individually in respect of each room and verandah, it results in fire accidents, enemy, robbery and rivalries. Hence southeastern part must be lower than southwest and northwest be more elevated than northeast.
38. If the main entrance of a house faces south and if there is a verandah in the front yard, leaving uncovered portion on eastern and western sides, without walls or grills, the walls at a height of three feet on either side of verandah, ensure eastward and southward movement and block southeastern and southwestern movement.
39. If there is a verandah in southern part of a house with enclosure in east by means of a grill, the wall underneath the grill should not be thinner than other walls of that house. Otherwise it amounts to extending eastern southeast.
40. If there is a verandah in southern part of a house, with enclosure in west by means of a grill, the wall underneath the grill should be equally wide as other walls of that house. Otherwise it amounts to extending western southwest : an ill omen. There must exist a gate in southern south east.

VIRTUES AND VICES OF SOUTHERN BLOCK

The sites of southern block have a bearing on the female members of the house.

Placing the head towards east – Ensures health at its best.

Features :

If the main entrance of a house faces south, and if there is an open verandah in south, without grills, on both the sides, such a house must have a slanting projection in north. If it is not possible the verandah in south must be grilled, and an exit must be provided towards south. The compound exist wall in south can be higher or lower than the main entrance of the house. Construction right on the southern boundary is congenial. But, if there is no lateral street in south, a compound wall must be erected.

If the purchase of a site or a house located to the west or south of the existing plot or house becomes inevitable, it is advisable to get the original or existing property be transferred in the name of some relatives and should be vacated before acquiring the new site or house. After purchasing that southern or western site the original structure in the transferred own plot must be totally demolished and fresh construction has to be commenced from west or south and after completion of the house, then only, the new house should again be got registered in original person's name and then onwards that house can be used for residential purposes.

If the main entrance of a house faces south, and if vacant site in north is proposed to be purchased, the same can be annexed after demolishing the intervening compound wall, or else a gate can be fixed in the exalted position of the intervening compound wall and entry can be made into. If a vacant site, is proposed to be purchased, located towards east of the existing south facing plot, a gate must be fixed in the exalted position of

Placement of head towards south – Improves health and bears growth.

the eastern compound wall or the wall may be demolished. A separate gate in southern southeast must be fixed to facilitate entry into the new plot. Otherwise the existing gate will become a southwestern gate and will effect badly. However if the existing house has street focus in southern southeast the plot located towards east can be purchased, to avoid the street thrust.

Positive Effects :

1. Elevation in south gives health and wealth to the inhabitants.
2. If southern portion is kept elevated and if lumber of the house is deposited therein, it augurs very well.
3. If doorways, located on the southern side, face south exclusively, they prosper the inhabitants lavishly.
4. If a site has a road on its southern lateral side it is advisable to start the construction right on the boundary, as it is congenial. However if there is a canal towards the southern lateral side of the plot a compound wall must be constructed and leaving a space of two to three feet from the compound, the house can be constructed.
5. If the rooms in the southern portion of a house are built high they bring prosperity to the residents.
6. If pials, on southern side of a house, are more elevated, than the plinth level of that house such a phenomenon brings good health and sound financial position to the inhabitants.
7. If rain or sewage water of the house flows out towards north, it yields prosperity to the household, and good health to the female.

Placing head towards west – Causes restless sleep and unrest.

8. If there is no scope for letting the rain or sewage water towards north, it may be diverted to flow towards east. It gives good health, name and fame to the male members of the family.
9. If there is no scope to let the rain or sewage water flow out of the house towards east or north, and invariably be flown towards south, in such a situation the entire water should be made to flow initially towards northeast and then the same should be diverted towards south through a covered drainage alongside eastern compound wall, or else, a small wall can be constructed, leaving space for the drainage, on eastern side alongwith the eastern compound wall, and then the drain be left into that space to flow from northeast. Thus, because of the flow of the water the south becomes low. The construction of the small wall, to ward off evil, makes south lower out side of our plot, which is a bit better than lost.
10. Keeping the south elevated and depositing stones or organic manure, bring around prosperity to the inhabitants.

Negative effects :

11. If vacant space in southern part of the site and the compound is less elevated or if southern part of all the rooms inside and the verandahs is less elevated such a feature results in ill health to the female inhabitants, financial losses and premature deaths.
12. Well or borewell in south causes financial losses and accidental deaths.
13. Some exponents of Vaasthu opine that the south is a

Placement of head towards north – Preferring fatal diseases and death.

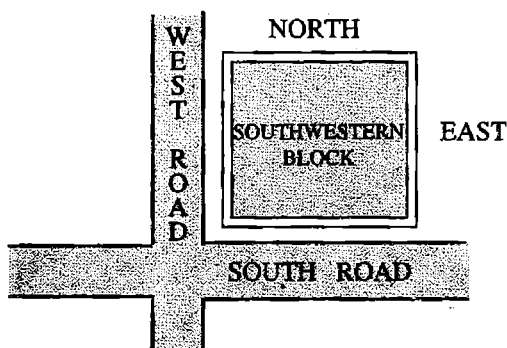

diabolic part and hence some vacant space must be left. However there is no harm, when such a vacant space is less than the vacant space in north or the construction is done even on the southern border.

14. Compound walls and other walls in southern part of the house should be higher than the ones in the northern part. Otherwise it will cause ill effects.
15. If the pials in southern part of a house are less elevated than Garbha level, such a feature leads to drain of money and ill health.
16. If the doorways in south face southeast, they cause fire accidents, robberies and litigations.
17. If the doorways in south face southwest they cause chronic illness, enmity and premature deaths.
18. There should not be a sloping projection towards south as it causes ill effects. However if such a sloping terrace becomes inevitable, a sloping projection towards north must be constructed with a greater gradiant or slope.
19. Portico in south should be constructed without pillars, because construction of pillars brings down the floor level of the portico and makes it less elevated than the plinth level of the house and leads to ill effects. Hence portico in south should be built with the help of quanty lever beam, extended from the hight of the door. The pillar under the portico will lead to inauspicious eastern southeast and western south west movements.
20. If vacant space in south is more than that of north it leads to financial losses, rivalries and makes the lives of the female members of the house miserable.

Face east while cooking – Make the house a place of happy living.

VIRTUES AND VICES OF SOUTH WESTERN BLOCK

A site possessing roads on western and southern lateral sides is termed as southwestern block. It is said that while proper northeast gives rise to birth, improper southwest leads to death. The southwestern block has a bearing on the head of the family, his better-half and the eldest male issue. Southwestern block proves to be more congenial than other blocks, if everything is set as per the tenets of Vaasthu. The malignance of this block, due to the breach of the tenets of Vastu, will not be realised soon, but after a long run, when it is out of gear.

Features :

1. The southwestern part enjoys same prominence as that of northeast, and have inverse effects to each other. Its elevation must be inversely proportionate to the level of northeast i.e. the more the northeast is depressed the more the southwest must be elevated. Southwest must be kept

Arrange hearth in southeastern part – Enjoy happy life and riches apart.

covered while northeast must be left open. Southwest must be heavier while the northeast must be lighter. Southwest must be set to a setsquare while northeast must have a projection. A house in a southwestern block must have vacant space on all four sides.

2. Most of the people try to project northeast by reducing southeast and northwest deliberately, thinking that projection of northeast is a good feature. But they are not aware of the consequential extension of southwest. Hence any attempt to project northeast, must be made only after ensuring southwest to a setsquare.
3. Southwest or Nairuthi as it is referred to in the science of Vaasthu also means adversity or misfortune. Hence every care should be taken in keeping the southwestern corner at a perfect angle in respect of the block as a whole; or plot or room or the house.
4. Southwest can have any amount of elevation or height. But southwestern corner of the house or the out house must be set to a setsquare. There should not be wells, pits or canals in southwest. Southwestern room of a house must be more elevated than the other rooms. Rain or sewage water should not flow out of a house towards southwest. The roof of the southwestern part must be elevated and heavy.
5. If southwest and northeast are preserved as per the tenets of Vaasthu, and if there are no other adverse features, such a house will become the seat of wealth and prosperity. If a man has wealth but is not able to enjoy the same, such wealth is of no use. He, who has wealth and enjoys it too, is really a lucky man. Hence if the corners at northeast and southwest are preserved correctly, the

Facing towards south while cooking – Brings financial troubles and suffering.

inhabitants of the house will have and enjoy all kinds of worldly riches.

6. If the road on southern lateral side is more elevated than the road on western lateral side of a southwestern block, the house must have an entrance towards south. But if the main entrance faces south and if it is inclined towards southeast by more than ten degrees, a gate must be fixed to the compound wall in southern southeast and the inhabitants should move through eastern main entrance. Such a house must possess a doorway in north also. Similarly if the western lateral road is more elevated than the southern lateral road, main entrance of the house in that block should face west. But if that main entrance is inclined towards western northwest for more than ten degrees, a gate to the compound wall must be fixed in western southwest and the inhabitants should move through the main doorway, placed in north. Such a house should possess a doorway in east also.
7. Any vacant land located towards southwest should never be annexed, even if the same is offered free of cost.
8. There should not be any tardiness during the construction of a house in southwestern part. Any laxity or delay in finishing the construction process leads to dire consequences. If the room in southwest is in a dilapidated state of, the task of renovation must be commenced, after keeping ready all the required material, and the process must be completed without delay at the earliest. During that period of renovation no family member should undertake any journey.

*In exigency arrange hearth in southwest – Victor thou should be,
thousands stand against.*

9. A site possessing a depression in southwest in the form of a pit, tank or well, and if filling of such a pit or tank is not practicable, purchasing such a site or plot should not be thought of.
10. The southwestern part of a site or house or compound wall must be higher or more elevated than the other sides. However it must be ensured that southeast is less elevated than southwest ; and northwest is less elevated than southeast and northeast is less elevated than northwest. However the same principle should not be applied to each and every room.
11. If a site possesses roads on southern and western lateral sides, starting the construction right on southern and western boundaries is congenial. If there is a neighbouring plot or a canal towards south or west; a compound wall must be constructed. The house must be built, leaving an interspace of 2 to 3 feet from the compound wall.
12. Southwestern corner of a house or compound wall must be set to a setsquare. The outer corner of the compound wall in southwest can be rounded or can be set at right angle. But inside, it must be set to setsquare.
13. The master's bedroom in a house must be provided in southwestern corner.
14. If it is not possible to provide a kitchen in southeast it may be provided in the room of southeastern corner of north-western or southwestern out house.
15. Slanting projection should not exist in southwest.

Cook not in east or north room - Bring not your fail and doom.

16. If it is inevitable to provide windows to south-western room in southwest, then the windows must be provided to the northeastern room, too.
17. Toilets can be constructed in southwest without a pit.

Positive Effects :

18. Elevation in south, west and southwest more than in other directions brings prosperity to the inhabitants.
19. In case the construction has to be taken up in south-western block the following precautions must be taken.
 - (a) The roads lateral to the site should not extend southwest.
 - (b) Similarly southwestern compound wall or south-western corner of the house should not extend southwest and should be set to square.
 - (c) Well or borewell should be sunk in northeast.
 - (d) Vacant space in east and north must be more than those of south and west.
 - (e) The house should possess RCC slab in south and west and slanting projection towards east and north. The inhabitants, then will be well off.
20. Tall trees in southwest should not be cut off. Similarly natural deposits of stones or hillocks etc., in southwest should not be displaced, as they make fortune.
21. Elevation in southwest brings peace and prosperity. Multi storied buildings in southwest or round hut, yield congenial results.

Hearth in west or south - Drains riches and females health.

22. If pials in southwest are more elevated than the plinth level of the house such a feature makes the inhabitants financially sound.
23. If heaps of stones or organic manure and other heavier things are deposited in southwest, such a house yields good results on health and wealth. This side should be used to place all the wreckage and for lumber room.
24. If the southwestern portion is cut off and elevated high the inhabitants would be very happy. Due to lack of experience, some people say, that cutting off southwest portion in construction, is not congenial, as it leads to many dire consequences.

It is generally observed in big cities in India many are constructing business establishments in southern southwest, with the road in south. They are entering into the house or the shop thro' southern southeast entrance as they have sold out or hired out the above shop. Similarly, when there is a road in west, the shops are built in west or western south west and sold/hired out to others. So in such phenomenon they are entering the house/shop through western northwest entrance. It is but natural then that southwest has cut off to the road on south or west. Even then, are the inhabitants not happy? Hence, we opine, that the authors of the books, should have some personal experience before commenting on effects of southwest, truncated. and so on.

Negative effects :

25. The Southwest should always be set to setsquare to every house. Otherwise unending hardships befall on the inhabitants.

Face west in northwestern room while cooking - Enjoy success against many binding.

26. The street thrust in southern southwest leads to chronic diseases to the female members, by the bye, it is observed, that the existence of a well in southern southwest also leads to their suicide and premature demise.
27. Same will happen to the male members of the family if the street thrust is the western south-west and a well also in western southwest.
28. Extention of south west as a corner, or towards south or west, is not congenial. If the southwestern corner of a plot extends towards south it affects the female members and if it extends towards west it affects the male members and if it extends at an angle clubbing both south and west both male and female members would be subjected to accidental deaths, chronic diseases, immoral character etc.
29. Doorways both to compound and the house in southern or western southwest lead to unpopularity, imprisonment, accidents, cardiac failure, homicide, suicide, paralytic stroke etc., of the inhabitants because the door ways are placed in debilitated awful positions.
30. If southwest is less elevated than northeast and has a well or a pit and water flows towards southwest, such a phenomenon lands the inhabitants in rivalries with each other, due to their stubborn attitude and ultimately they are ruined.
31. For a house belonging to southwestern block, if there is a slanting roof towards south, it affects the female members, and if the same is towards west, it affects the male members, and subjects them to paralytic stroke or chronic illness.

Hearth in northern northwest – Proves most fatal to the dearest.

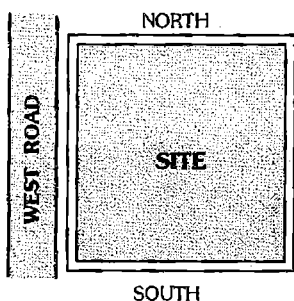

32. The exit gate must be placed only towards west or only towards south and not towards both the directions to the house or in the compound. Otherwise they cause enmity and indebtedness to the inhabitants. However the exit ways can be fixed in south and west, when there are exit ways in north and east also. The doors in four directions can be put when the plot is correctly set to compass.
33. If the house constructed in a southwestern block has more vacant space in south than in north, it affects the female members ; and if the vacant space in west is more than that of east, it affects the male members ; and in both the cases it results in their premature death of illness. Such houses become generally heirless and fall in hands of others. In our observation, many such defective houses, are found, mostly baneful.
34. If the house belonging to a southwestern block has vacant space in south and west with no space in north and east, or if the construction starts right on the eastern and northern boundaries, such a house lands the inhabitants in financial losses, loss of progeny and ultimately becomes female property.
35. One may come across houses belonging to southwestern block auguring well, in spite of the existence of one or more of the above defects. The reason would be evident. If we observe the entire row, wherein the northeastern part of the northeastern house must have been cut off. The above feature may take place due to a diagonal formation of the eastern and northern lateral roads lessening southeast of the block . Residents of the above block would no doubt enjoy sound financial position but would be money minded and don't come forward to make any sacrifices. But in the long run they will not be happy.

Face not north while cooking – Avoid catastrophies and suffering.

36. The room in southwestern part of a house can be used as a bedroom or as a lumber room. Providing a bath room or toilet in southwest with a pit would be inviting troubles and tribulations. Depression in southwest of the site or the compound or the rooms of the house or the verandahs will result in financial losses, chronic illness and even death.
37. Depression in southwest or existence of wells or pits would subject the inhabitants to financial losses, chronic diseases and agitated minds.
38. If the rain or sewage water of south west block flows out of the house from south, it affects the ladies and if it flows out from west, it affects the gents, badly.
39. If the southwestern corner projects out towards southwest, the residents of the plot would suffer from rivalries, court litigation and indebtedness.
40. Forced criminals, persons subjected to homicide, frustrated persons, who have committed suicide, and persons suffering from chronic diseases, generally inhabit such houses. If you make a keen observation, you'll find easily, the defects and the phenomenon.

VIRTUES AND VICES OF WESTERN BLOCK

The western block also has a bearing on the male issues. If the main entrance of a house faces west any acquisition of a vacant plot located towards the north necessitates fixing of a separate gate in the exalted place of north of the existing plot. The compound

Prefer not a hearth in northeast – Lest, it would invite the dreadful beast.

wall can be demolished. Another gate, must be erected in the western northwest of the new plot. However it must be borne in mind that a resident enjoying the benefit of street trust in western- northwest, should never acquire a plot located towards north, because the new acquisition alters the position of street trust and shifts it to western southwest, which is not desirable.

Any acquisition of a new plot on the eastern side necessitates fixing of a gate in exalted place to enter into the new plot, in eastern compound wall or the intervening wall may be demolished.

Features :

1. The compound wall of a house facing west can be constructed higher or lower than the main entrance of the house. One should never acquire a vacant plot or house located towards west of ones site or house. In case such an acquisition becomes imperative, the existing house must be vacated and transferred in some relative's name and then only the new plot or house must be acquired. Further the existing house must be demolished completely and a new house must be constructed in the plot, starting the construction from the west, and after its completion the house must be got registered in the original persons name, and then only it should be occupied. Then the old place will become the northern place for the new entrant.
2. If there is no possibility of releasing the rain or sewage water out of the house towards east, it should be directed towards northern northeast.

Northeasten godown - Never brings adoration upon.

3. Further if there is no scope for releasing the rain or sewage water either towards east or towards north, it should be directed first towards northeast, and then the same can be allowed to flow towards western northwest along side the northern boundary wall. Constructing an additional compound wall, alongside the northern boundary, by leaving sufficient place for the drain, and allowing the drain towards northeast into the lane, augurs well. The effect of gradient in land surface towards west, gets compensated, because of the inherent low lying feature of the land surface outside the compound wall.
4. If the house facing west possesses balcony in the west without grills, then there must be a sloping projection in the east.
5. If a verandah in west becomes inevitable, there should be a compensating verandah towards east, at a lower level.
6. For a house facing west, if there is an unenclosed verandah in the west, smaller walls as thick as those of the house, at a height of three feet in north and south, must be constructed. Such a feature causes eastward and westward movement of the inhabitants and arrests southwestward or northwestward movement.
7. The portico, if any, in west should be constructed without pillars as such it will become low - leveled than the plinth level of main house. Hence it should be constructed by extending the roof without pillars.

Store in south western outhouse – Ever lasting bounty to amusing spouse.

Positive effects :

8. If there is a road on the western lateral side of a plot, construction of a house right on the western boundary augurs well. In case there exists a neighbouring plot or a canal in the west, a compound wall may be erected and construction of the house can be done with an open space of two to three feet from the compound wall.
9. Depositing organic waste, heaps of stones in the west augurs well.
10. The main entrance or doorways in west yield good results, if they face west exclusively.
11. Construction of roof level porticos in west, avoiding slanting projection, is considered to be a good feature as per Vaasthu.
12. If the pials located in western part of the house are more elevated than the floor level of the house, such a feature is expected to earn name, fame and financial progress for the inhabitant.
13. If the floor level of the outhouse in west is higher than the plinth level of the main house, such a feature increases the name and fame of the inhabitant.
14. If the walls and the compound wall located in the west are higher, it augurs well.
15. Growing hefty and tall trees in west yields good results.

Godown in east of the southeastern kitchen – Blesseth the household

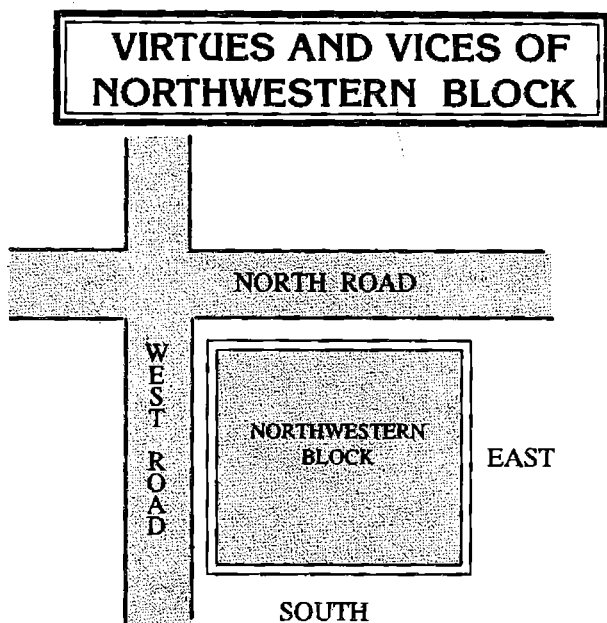

Negative effects :

16. If the pials on the west are less elevated than the plinth level of the house, it leads to financial losses and ill-health. However, there should not be pials in western- northwest.
17. If the western part of the vacant site or the western part of the house or the rooms or the floor level of the verandahs in the western side, are less elevated, such a phenomenon leads to disgrace to the inhabitant, resulting in loss of wealth defame and misery. If the vacant space in the west is more than that of east, it bears ill effects up on the male issues.
18. If the floor level of the out house or huts or rooms in the west, is lower than the plinth level of the house, such a feature leads to disgrace and financial loss of the inhabitant.
19. If the doorways in the west, face southwest, it leads to chronic diseases, premature mortality and financial losses. If the doorways in the west face northwest, it leads to court litigation, enmity, disgrace and financial losses.
20. If the rain or sewage water flows out of the house through west, it leads to chronic diseases to the male inhabitants.

Note:- On account of some litigation the names and addresses of the defective habitats are not mentioned. The temples at Bhadrachalam and Vedachalam have not been able to attract riches despite their importance and popularity, due to the ill-effects of southwest. ie, the presence of the Godavari and the Krishna respectively, in the west.

Stores in south and west – Permanent seats for the richest.

A northwestern block has a bearing on the female inhabitants and the third issues.

The northwestern block has got the potential to turn the inhabitant either as millionaire or as an insolvent. Its power depends on the extension or projection of the plot in various intermediate directions and results in friendship, rivalry, success or otherwise in court litigation. The houses of the persons turned as mendicants or philosophers or saints suffer from the ill effects of northwest.

Features :

1. A site possessing roads on northern and western lateral sides, is called northwestern block. The northwestern block occupies the third place in order of importance among all

Store room an aggravater of Vaasthu in the north - No rest, no peace,

the blocks as per the science of Vaasthu. It augurs a bit more than the southeastern block.

2. A house constructed in a northwestern block facing west, yields very good results and competes with those of northeastern and southwestern blocks, provided the road on the northern side extends towards northeast.
3. The northwestern part should be less elevated than the southwest and southeastern parts and should be more elevated than the northeastern part.
4. There should not be any type of depressions like wells or pits in northwest.
5. Toilets can be located in northwest but it should not touch the compound in north. The pit or tank should be located only in north space.
6. The site should not extend in west towards the north-west, as a result of a projection, in the shape of a square or rectangle or in a conical form.
7. The rain or sewage water should not flow out of the house through the northern northwest.
8. Reasonable truncation of northwest, no doubt, yields good results, but the same should not be a deliberate attempt. The northwest of the house should not be truncated.
9. Location of kitchen in northwest is a controversial issue. If the main entrance of a house faces south, kitchen is generally located in southeast of the room in north and which will be the northeast to the plot. In such a case

Deity's corner and side is not cared – Devotional fervour is mostly craved.

making two parts in northern room, the cooking platform should be arranged in the eastern southeast corner of the northwestern part of the room. If it is not possible, the cooking can be done in the northwestern room by facing west; on the platform built along side the west without touching the northern wall.

10. Cattle shed, can be constructed in the northwest but the structure should not be contiguous to the compound wall on the northern side. It can however touch the western compound wall. It should be built in line with the house ; if it is not touching the house on west.
11. Hefty trees like coconut, mango etc., can be grown in the west and northwestern parts.
12. Tender flower plants in flower pots can be placed in the northern northwest.
13. The northwestern corner of the compound wall can be rounded or constructed at an angle.
14. If the street on western lateral side of the northwestern block is less elevated than that of the northern lateral side, the house must face north. However if the plot is inclined towards northern northwest by over ten degrees as per compass, the gate of the compound wall should be placed in northern northeast and the movement should be done thro' the main entrance, facing east. A seperate door must be placed in northern part of the house, besides a gate in the west of the compound.
15. Even a small defect in the northwestern part of the site or the house leads to unwarranted animosity. Hence any

Permanent niche in northeast wall – Dwindles Vaastu to the least and fall.

alteration in the northwest must strictly confirm to the tenets of science of Vaasthu.

- 16 One should never select a site making southeastward movement from northwest.

Positive effects :

17. The street focus in the western northwest of a north western block enhances the name and fame of the inhabitant.
18. Movement towards western northwest, which is an exalted position, is a favourable one.
19. In a north western block, if the north west is less elevated than southeast and southwest but more elevated than northeast, as well as the northwestern corner is made heavier with the household loads, it will yield good results.
20. If the main entrance of a house faces west and if the vacant space in the east and north is more than that of west and south and if there are no structures built on the northern and eastern compound walls ; and if the kitchen is located in southeast and if there is a well in north east, such a house becomes the abode of intellectual, wealthy and law abiding citizens.

Negative effects :

21. Street thrust in northern northwest subjects the female members of the house to ill health, besides making the inhabitants prone to vices.
22. Extension in northern northwest leads to court litigation, robbery, fire accidents, loss of male progeny and mental worry.

Permanent niche in south and west – Showers boons of delight on the nest.

23. If the northwest is less elevated than the northeast, and wells or pits are located therein, it leads to court litigation and chronic diseases.
24. If the northwest is closed, and the construction starts right on the northern boundary, such a phenomenon effects the female head of the family and also the third issue.
25. If the pials located in the north are more elevated than the plinth level of the house, the female inhabitants may become chronic patients and the male members may fall in debts.
26. If the main entrance of a house falling under northwestern block faces north, the house should be in line with the adjacent houses on the eastern side and should not recede lest the adjacent house on east will bar the eastern northeast sunlight, due to this house.
27. If there is no gate towards west, while there is a gate in north to the north western block, it may yield misery.
28. If the main entrance of a house faces north and if there is a gate in the debilitated place, such a phenomenon leads to a debilitated northern northwest movement and yields ill effects.
29. If the main entrance of a house faces north and if there is no vacant space in east, but an annexed building, and there is more vacant space in south than in north, such a house becomes an abode of perennial problems and goes on changing hands.
30. If the main entrance of a house faces west and the construction starts right on eastern and northern

Face east while praying – Embrace health and wealth as blessing.

boundaries, the inhabitants become indebted and the house would be put up for auction in due course.

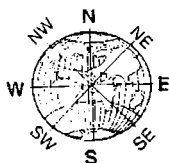

31. If the main entrance of a house faces west, and if the construction starts on the eastern boundary, and if there is a slanting terrace in the west, to the house, as well as, in the first floor, the male members of the house would suffer from paralytic stroke. If the main entrance of a house faces west and if the construction starts right on the northern boundary and if there is a slanting terrace in the south in ground floor as well as in first floor, the female inhabitants of the house would suffer from paralytic stroke. Ardent observation will reveal the truth.
32. If the main entrance faces north, and if the construction starts right on the eastern boundary, and if there is a doorway in western southwest towards western road such a house or a business establishment will be suffering constantly, from inconsistency in business, consequent losses and ultimately witnesses a change of management.
33. If the main entrance faces north, and if there is an extension in southeast and northwest and truncated in northeast as well as southwest ; and if the doorways are placed in debilitated positions, the residents of the house suffer mentally from internal rivalries, due to difference of opinion between wife and husband, father and the son, mother-in-law and daughter-in-law , etc. Such a house would suffer with fire accidents and loss of life.
34. If the main entrance of a house faces north and if the construction starts right on the eastern boundary, with irregular walls on the eastern and northern side, the progeny would be physically handicapped.

Prayers offered facing west – Boomranges an era of the worthiest.

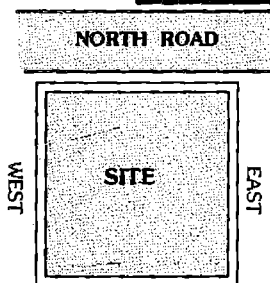

35. Any irregularity in northwest i.e. either closing or extension, leads to lunatics, vagabounds and sometimes to commit suicide.
36. One may come across houses suffering from the above defects but proving to be ideal houses. The reason however would be the contraction of northeast to the northeast houses, in northeast due to the inward inclination of the northern lateral street i. e. proceeding from northwest to southeast. Even in such a situation inhabitants despite of their wealth, lead miserly lives and often suffer from mental imbalance. Generally, such houses witness female domination. The calamities will take their own time, rather than be falling at once.
37. If we observe the features of the houses put up for auction, we find that defects in northwest only make the inhabitant insolvent. The nature of the defects may be either extension of northern northwest or location of wells or pits in northwest or elevation of northwest than to southwest or closure of northwest, or due to southeastern or northwestern movements.
38. If we observe the features of the houses wherein fire accidents take place, we find that the diagonal measurement from southeastern corner to the north-western corner would be more than that of the measurement from northeast to southwest.
39. The floor level of the house or open space or that of the verandah if northwest, is less elevated than northeast, or more elevated than the southwest and southeast, it instigates rivalry, diseases to women folk and unwarranted fears at home.

Sun is the soul of life on earth – East and west praying enriches birth..

10. The verandahs located in northwest are to be closed with a grill in north and south, and the breadth of the base walls bearing the grill should be equal to the breadth of the other walls of the house, and in no case should be less. Otherwise it leads to the extension of northern northwest and western southwest. There must be a gate in western northeast to this block, as this house will become exiguous in the houses towards the north road and exalted in the houses towards the west road.

VIRTUES AND VICES OF NORTH BLOCK

Northern blocks have a bearing on female members and also on the finances.

Features :

1. The floor level of the rooms located in the northern part of a house should be less elevated. The same principle should be applied in the ground floor as well as the first floor. The projections or balconies, to these rooms in a lower level are very much appreciated.
2. If the house facing north does not possess vacant space in east, the northeastern house, at the east end becomes an auspicious one. If the northeast of that house is truncated, the first house or the second house located to the west or the house at the end of the street in the west, would become auspicious.
3. The main entrance of a house facing north should be more elevated than the compound wall. The compound wall in the northern part of the site should be constructed only after the completion of the house.

Eastward bath room – Is peaceful life's boom.

4. People desirous of letting out their houses should let out only the exiguous portion, which is auspicious. If the tenant vacates the portion, the owner should fix up another tenant at the earliest, or should occupy that portion immediately otherwise the exalted portion occupied by the landlord becomes heavy and brings misfortunes. Kitchen should not be located in the northern part of the house.
5. If the house constructed in northern block occupies the entire plot, leaving no vacant space in the east and if there's a road on north side, and house faces north, and if that house is constructed as per the science of Vaasthu, it yields good results, provided that there should not be an open place towards west, too.
6. The slant projection towards south should be more elevated than that of north. R.C.C. constructions should possess two or three feet balconies in north as well as east, invariably to provide vacant space in east and north on the first floor. There need not be any balcony in south and west.
7. If the neighbours on the northern side construct their house right on the northern compound wall, another smaller compound wall of four feet height, with four inches thickness, must be constructed, leaving a space of three inches.

Positive effects :

8. If the northern part of a site or a house or the floor level of the verandah in north is less elevated, such a house breeds wealth and keeps the female members of the house cheerful.

Bathroom in south sans pit – Keeps in riches and joy.

9. If the vacant space in the north is more than that of south such a house will become the abode of Laxmi, the goddess of rich and plenty.
10. If the rain or sewage water flows out of the house through the northeast, it augurs well all the while.
11. If the doorways in the north face north directly they yield good results. If they face northeast the house will be the abode of intellectuals, and the goddess of wealth, Laxmi.
12. If the pials in the northern portion are less elevated than the plinth level of the house, such a house guarantees name, fame and prosperity.
13. Slanting projections in north keep the female inhabitants healthy.
14. If the vacant space in the north, is acquired, for any cost, it will bring allround prosperity.
15. If there is more vacant space or open yards in the northern part of the site, it ensures allround prosperity and perennial wealth.

Negative effects :

16. If the northern portion is more elevated, the house hold witnesses financial drain and the female members would be exposed to ill health.
17. If the construction starts on the northern boundary leaving vacant space in the south, such a house becomes desolate and hierless and usurped.
18. If the organic waste, heap of stones and waste materials are deposited in the north, they cause financial losses to the inhabitants.

Bathroom in west sans pit – Enlarges family and keeps well knit.

19. If the pials located in the northern part of the house are more elevated such a feature causes gain expenditure, mental agony and indebtedness.
20. If the doorways located in the north face northwest such a feature intrigues robbery and fire accidents.

FIXATION OF INTERMEDIATE DIRECTIONS

The confluence of two directions is termed as an intermediate direction. At the time of construction of a house it is very important to fix the intermediate directions as per the science of Vaasthu. Any mistake or negligence in ensuring proper intermediate directions leads to, either extension or contraction of one or more intermediate directions. Consequently the inhabitants will have to face the ill effects of such extension or contraction.

The setsquare is the basic tool which determines an intermediate direction. Hence the builder or the mason should possess a perfect setsquare and the same should be preserved carefully. Before fixing the intermediate directions, the measurements of land in four directions should be conformed.

Procedure :

If the fixed direction is west, a peg has to be fixed in the southwest corner. Then a strong thread has to be tied to the peg in such a way, that it extends towards north along the western boundary, towards east along the southern boundary and lines should be drawn along the thread on the ground. A mark has to be made at a distance of three feet from the peg on the

Bathroom in north - Paves way for comforts bequeath.

northward line. Similarly a mark has to be made at a distance of four feet from the peg on the eastward line and both the points have to be joined by means of a diagonal line, which should be of five feet length. If the length of the diagonal line exceeds five feet, it denotes extension of southern southeast, and if it is less, it denotes extension of, southern southwest. If the length of the diagonal line is exactly five feet, then only the peg indicates proper intermediate direction, the southwest.

If the, fixed direction is south, a peg has to be fixed in the southeast corner initially and mark has to be made at a distance of three feet from the peg on the westward side. Similarly another mark has to be made at a distance of four feet from the peg on the northward side. Both the marks are to be joined by means of a diagonal line which should be of five feet length. If the length of the diagonal line, exceeds five feet it indicates extension of eastern northeast, and if it is less, it indicates extension of eastern southeast. If it is exactly five feet, it means that, the peg indicates proper intermediate direction, the southeast.

If the fixed direction is east, a peg has to be fixed in the north eastern corner of the ground initially, and a mark has to be made at a distance of three feet from the peg on the southward side. Similarly another mark has to be made at a distance of four feet from the peg on the westward side, and both the marks are to be joined by means of a diagonal line, which should be of five feet length. If its length is less than five feet, it indicates extension of northern northeast and if it exceeds five feet it indicates extension of northern northwest. If it is exactly five feet, then it will correctly denote the intermediate direction, the northeast.

If the fixed direction is north, a peg has to be fixed in the northwestern corner of the plot initially, and a mark has to be made at a distance of three feet from the peg on the eastward side.

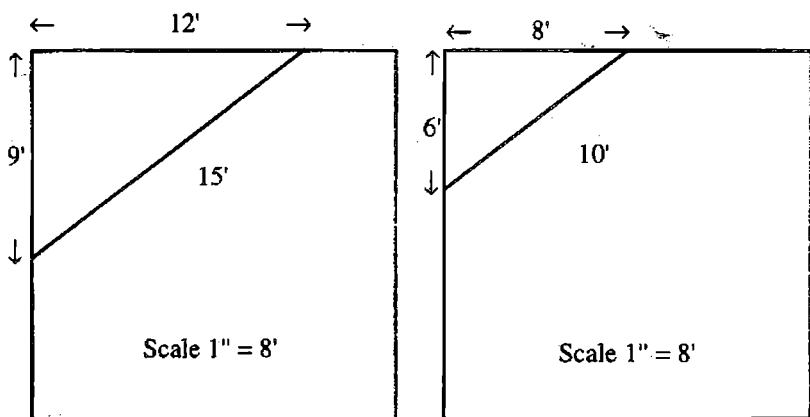

Face not east in toilet – Lose not health and become unfit.

Similarly another mark has to be made at a distance of four feet from the peg on the southward side and both the marks are to be joined by means of a diagonal line, which should be of five feet length. If the length exceeds five feet, it indicates extension of western- southwest and if it is less, it indicates extension of western- northwest. The lines are to be adjusted so as to ensure that the length of the diagonal is exactly five feet, which denotes correct point of the northwest.

By measuring the diagonal lines of square or rectangle shaped vacant plots or individual rooms we can ensure the correctness of intermediate directions. Generally the diagonal measurement from northeast to southwest and from southeast to northwest will be equal, if the intermediate directions do not project or extend.

Further the builders or masons should ensure proper intermediate directions at each and every stage of construction right from the stage of laying foundation till the completion of walls. The procedure to be followed for ensuring proper intermediate direction is as follows :

In the east the septic tank – Proves beneficial as a scheduled bank.

Depending on the area of the plot, the variables 3, 4 and 5 are to be multiplied by the same number i.e. $3 \times 2 = 6$; $4 \times 2 = 8$; $5 \times 2 = 10$ or $3 \times 3 = 9$; $4 \times 3 = 12$; $5 \times 3 = 15$ in order to calculate the length of the diagonal to ensure proper intermediate direction. It's not a new formula, but an age old one. If the intermediate directions are set to set square, the residents will enjoy all the comforts of the world, while the irregularities will mar the lives of the inhabitants with unending miseries.

If the site does not fall in line with compass and is inclined towards any particular direction by 45° the southeast will fall in between east and south ; southwest in between south and west ; northwest in between west and north ; northeast in between north and east. In this manner there is no harm if in a rectangular the diagonals i.e. northeast and southwest or southeast and northwest are longer than the other when northeast is a bit increased in general. They should not be considered as extended corners because they are not projected angularly.

GUIDE LINES TO THE MASONS

Masons play a prominent role next to the exponents of Vaasthu, in the construction process. That is why the builders should select and appoint only experienced and efficient masons. Otherwise their inefficiency tells upon the fortune of the inhabitants heavily, as the evil effects of Vaasthu are inevitable.

Masons are supposed to possess correct understanding of the main important principles of the science of Vaasthu. The main tools of mason viz., set square and plumbline

Toilet in southeast – Is a healthy financial aspect.

must be of high quality and should be accurate. The setsquare is used for fixing and correcting the corners or the intermediate directions, while the plumbline is used to ensure the perpendicular accuracy of the walls. Both the above instruments should always be handled with care, and no other instrument broken, repaired or irregular should be used in their place, as it may lead to difference in the dimensions of the rooms and the distance between the parallel walls. This may result in ill effects on the inhabitants. Rectification of such difference becomes expensive and often involves demolitions and alterations. Hence it is the bounden duty of masons to use correct setsquare and plumbline.

Before starting the process of construction the masons have to identify all the eight directions precisely, and should effect necessary corrections as per the science of Vaasthu. This process is otherwise called the purging of the site from the evil effects of Vaasthu. Just as the ingredients of a medicine are purified, before its preparation, the purging of the site is a must, before going ahead with the construction process.

The process of purging the site starts with cleaning and preparation of plot. It must be ensured that the east, north and northeast are kept less elevated than south, west and southwest. Pits, depressions and wells located in debilitated portions should be filled up and the land surface should be levelled and raised in those directions. Ant hills should not exist in any part of the plot, even in southwest, as the depth of an anthill would be inversely proportionate to its height. Hence it is to be dug out and reclaimed, by way of filling the ditch and levelled. Some people undertake this levelling or reclamation work after the construction process. But such a negligence would cost them heavily, as the

Toilet in southeast with pit – Mars the health damn it.

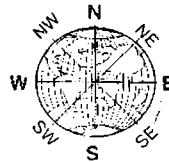

evil effects of Vaasthu are inescapable. Further it must be remembered that the process of construction would become quicker in a plot purged and corrected as per Vaasthu. Hence it is a prudent measure to get the plot purged of the defects, as prevention is better than cure. Before the construction of the house is taken up, the compound wall should be built first. It is necessary because it is scientific and favours as per Vastu really it starts with the beginning of the compound wall. If it is not possible to complete it, it can be built upto basemint level. Before this the southwest be checked to the set square extending the northeast by a bit. This will not only avoid the maleffects of the surroundings but also fervours of Vastu.

After purging the site, duly identifying the spot and side, fix a peg in southwest. Tie a cord to the peg and run it towards southeast alongwith the eastern side of the setsquare placed at the peg. Similarly run a cord towards northwest alongwith the north side making 90° at the peg. Fix a peg at southeast and another one at northwest.

From the peg at southeast run a cord unto northeast alongwith north, making 90° at the peg with the cord drawn from southwest. This should run a bit apart from the hand of set square. Next run another cord from the peg in northwest unto northeast, making 90° at the peg with the cord drawn from southwest. This too should run a bit apart from the hand of setsquare. The conjugal point of these two cords is northeast. Since the two cards have increased the northern and eastern sides, it results in the extention of northeast.

Face the south in toilet – Be happy with health locket.

It is better to extend the northeast to the whole plot, rather than to the house.

Before going ahead with the actual construction process soon after laying the foundation stone, a well or a borewell must be sunk either in the northeast or in the exalted east or north, and the same ground water should be used for the construction as far as possible. The building materials like bricks, stones, sand, timber, lime etc., should not be deposited in north or east. They should be stored only in south or west .

The excavation work should start from the north eastern corner and should proceed towards northwest, then from northeast to southeast; followed by excavation from northwest to southwest. Finally the work should conclude by excavating the southern side from southeast to southwest.

While constructing the foundation or plinth the process should start from southwest to southeast followed by southwest to northwest and from southeast to northeast and should be concluded by northwest to northeast.

Same method must be followed in constructing the walls. It must be borne in mind, that at the end of a day's work the walls on the eastern and northern sides, should never be higher than the walls on southern and western sides.

The height of the walls in some books has been determined taking into account the square area of piazza (Garbha). But, as per our experience, there exists no such hard and fast rule. In cold areas like Mysore, the cieling of the house used to be 10', while

Septic tank in southern part – Makes life insecure as boding chart.

in hot areas like Rayalaseema, it is 10' -13' high. Generally the ceilings of houses in temperate regions should be around 11 to 12 feet.

If pillars are indispensable they can be of square or cylindrical shapes of wood, concrete or stone. However, the pillar in northeast should invariably be a square or planky in shape. Edge of any wall or pillar or compound wall should not face the main entrance of the house. Similarly there should not be a tree or well or pit in front of the main door. The northeastern corner of the outer wall of the house or of the compound wall should not be rounded. Such a rounding is however permitted in respect of other corners.

Erection of semicircular structures like arches on the gates for facilitating growth of creepers is not advisable. Such a feature can be provided in respect of gates in south and west. The flooring of a house should be laid in such a way, that it facilitates flow of water from southwest to northeast. The level of the doors should also gradually be reduced from south to north and from west to east. The floor level of the room in southwest should always be more elevated, while the floor level of the room in northeast should be the lowest. Movement under a cross beam or lintel is not to be considered as an evil feature.

Use of old and second hand building materials like stones, timber, woodmakes etc., is not forbidden, provided the materials are in proper form. Demolition of old house should be commenced only from northeast, and the demolished materials should be deposited only in southern or western parts of the site. In respect of the structures raised by means of pillars, there is no restriction on the number of pillars. Renovation of houses from

Toilet in southwest with pit – Decreases health beyond doubt.

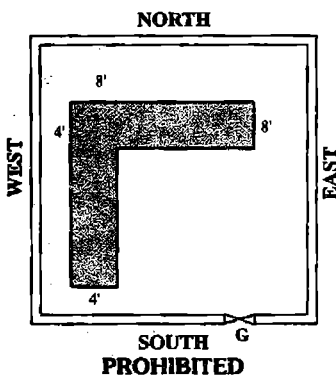

west or south results in ill health to the eldest male member and the eldest female member of the family respectively.

All the above principles are to be borne in mind by the masons or builders, so as to ensure early and smooth completion of the project, and to be employed for another new house by the owner, soon.

DIVERGENT STRUCTURES

Some people use to construct the house in '└' or '┐' form. These divergent or convergent structures are not useful for residences, but for schools, offices, hospitals, hostels and cattle yards. These too have to be constructed according to Vastu, considering the eight directions.

The following diagrams will explain it in detail.

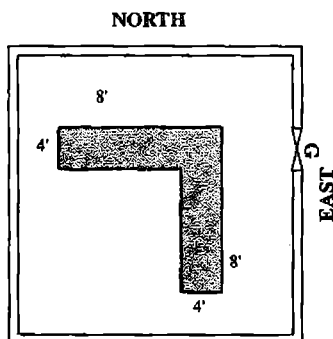

Some divergent structures are built on northern and western boundaries in this '└' shape. This will make the north and western northwest heavier and leave open southeast and south. This type of building will bring great misfortunes to the inmates.

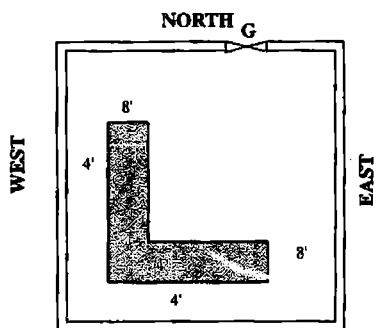

Sit not in toilet facing west – Pin not health to the crust.

Some poeple built houses on northern and eastern boundaries, in "┐" this type. This closes north, northeast and east, leaving open in west, south and southwest, leading to the premature death of inhabitants.

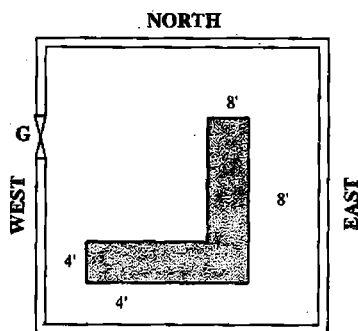

**SOUTH
PROHIBITED**

**SOUTH
PERMITTED**

Some people built houses on western and southern ends in '┐' shape, making heavy in west and south; leaving open in north, northeast and east. This brings in beneficent blessings of Vastu.

**SOUTH
PROHIBITED**

Some divergent, constructions are made on east and south ends in '┐' this shape, making heavy the east and northeast. Since it leaves open in northwest and south, it augurs evil.

Septic tank in west – Allows diseases to play the worst.

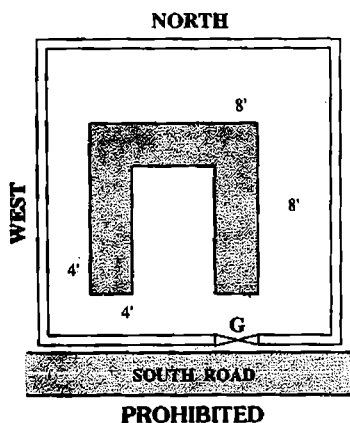

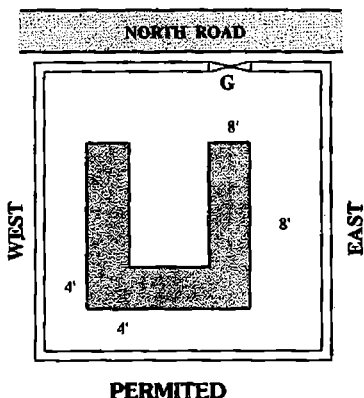

In all the 'L' shape is an ideal structure. It should be noted that the extension should be uniform in both sides, and should not possess first floor.

CONVERGENT STRUCTURES

Buildings constructed covering three sides of a plot in the shape of "U" leaving vacant space in the middle are called convergent structures.

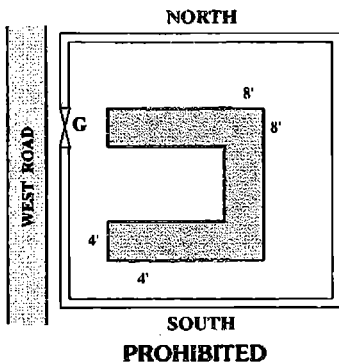

The convergent structure, 'U' shown in this diagram is built on, south, west and eastern boundaries, leaving the north open, is auspicious.

The structure of this shape 'U' built on east, west and north boundaries, leaving the south open, causes miseries.

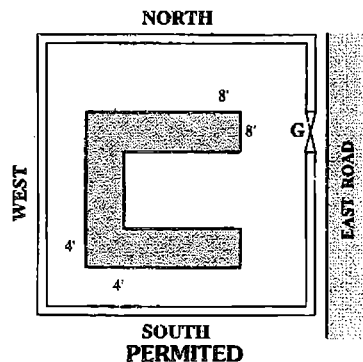

Toilet in northwest – Proves beneficial as cataphract.

The building of this shape, 'C' constructed on north, east and south, leaving west open, is most harmful.

The structure of this kind 'C' built on south, west and north boundaries, leaving east open, is most beneficent.

The convergent structures with an opening towards north or east, yield good results, provided the vacant place in the middle is in a form of perfect rectangle.

THEORY OF MAIN ENTRANCE

Oriental Vaasthu attaches lot of importance to the main door of a house. It is referred to as the entrance of a lion's den. As per the oriental Vaasthu the main entrance of a house is

Toilet in northwest with pit – Breeds never ending litigations and covet.

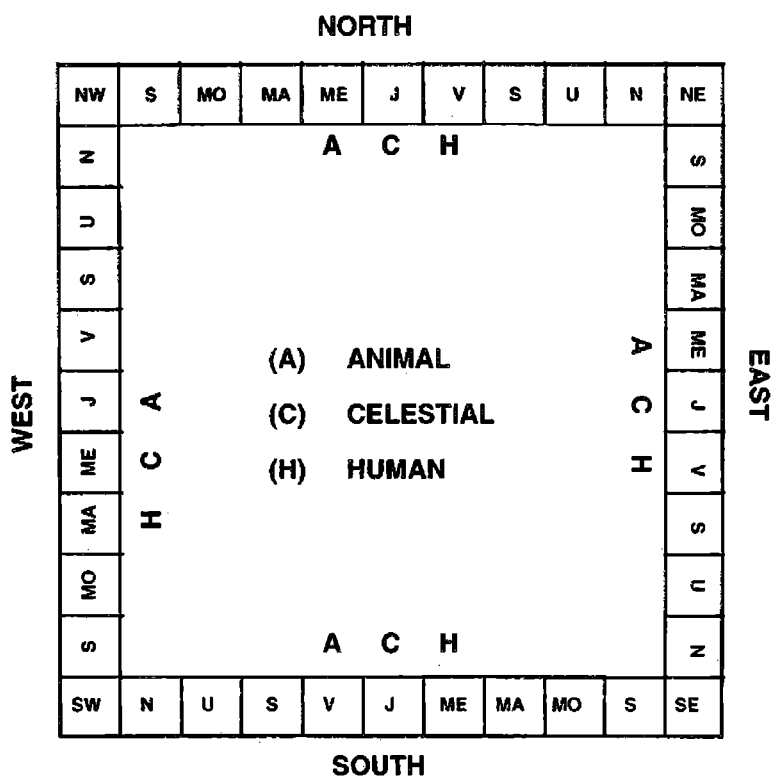

determined, basing on the star governing the name of the male head of the family or the owner. But this theory doesnot stand to logic, simply because the governing stars of a father and a son can rarely be identical, and hence any entrance compatible to the governing star of the father, need not necessarily suit the son. Further this phenomenon should result in change of entrance by every successor of the house. But history reveals, that no where such a practice of changing entrances had been followed. Moreover the same houses are said to be inhabited by serveral generations and the inhabitants are reported to have lead prosperous lives. The history also reveals that many, who had their main entrance as per the name, are leading troublous and horried life. This phenomenon is consoled by the astrologists with one or the other pretext. Hence, the theory of governing star for main entrance, slips the ground.

The palmists, astrologists, who used to help to perform rituals, and have the least knowledge of Vaasthu, are poking their noses, unnecessarily and leading people astray for their selfish motives. They are least concerned about the fate of the owner of the house and his future, too. The people are easily gulled because they do not know, the ABC of Vaasthu. How can we assure a patient of his life, when the surgeon does not know the ABC of anatomy and physiology ? " Vaasthu Chintamani" an oriental treatise on Vaasthu suggests the following method for determining the main entrance. Each side has to be divided into nine parts representing nine planets. Ideal entrances are suggested

Septic tank in north - Encourages financial growth.

for animals, celestials and human beings respectively on each side as shown in the diagram below - Under any circumstances, the law should not be breached. What a conception of dire consequences !

1. SUN 2. MOON 3. MARS 4. MERCURY 5. JUPITER
6. VENUS 7. SATURN 8. URANUS 9. NEPTUNE

Face north in the toilet – Usher prosperity and health a lot.

Above theory of entrance results in, the regular movements of the inhabitants, in the following directions :

A house possessing main entrance in east in the house of Venus results in southeastward movement, which leads to total disaster.

A house possessing main entrance in west in the house of Mars results in southwestward movement, which causes troubles to the male head of the family.

A house possessing main entrance in south in the house of Mercury results in exalted southern movement, which is good to a certain extent.

A house possessing main entrance in north in Venus results in exalted northward movement which is good for the inhabitants.

Thus as per the oriental theory of main entrance, houses facing east and west will possess main doors in exiguous positions and hence it is not acceptable to the modern science of Vaasthu, which says that every care should be taken to fix the doorways in exalted positions. Irrespective of the facing, the minimum dimension of the doors, as per Vaasthu, is $6' \times 2\frac{1}{2}'$ feet. They may be bigger as well. Further it is said that a door frame can possess single or double shutters.

FIXATION OF DOORWAYS

The Science of Vaasthu attaches lot of importance to the doorways. The designing of an ideal house not only requires providing for doorways in exalted positions, but also providing vacant space on all the sides of a house. The

Toilet in northeast – Always proves a negative catalyst.

vacant space in east and north must be more, when compared to the vacant space in west and south. As per the oriental science of Vaasthu, a house can possess a single door or doors of even number excepting the numbers ending with zero. However modern science of Vaasthu and our investigations conclude that doors can be either of even number or of odd number, or even numbers ending with zero. Same is the case with windows and ventilators.

In respect of a house possessing main entrance in west, a door in east, is a must. Similarly a house possessing main entrance in south, must possess a door in north. Above principle is applicable only in respect of residential buildings. However, the fixation of door as per the above principle can also be adopted in respect of commercial constructions, but it is not a must because the building is not used for residential purposes. Further it must be noted that the door frames and thresholds can be made of wood, iron or cement.

Principles governing fixation of doors :

While fixing door frames or antas in an internal wall it must be ensured, that the door frame is not fixed contiguous to the main wall of the house. Atleast a minimum of four inches pad should be built before fixing the doorframe to a lateral wall. This is to ensure the continuity in construction of walls viz. the wall construction started from south be continued unto north and similarly the west unto east.

It must be ensured that doors, windows and cupboards are fixed face to face in opposite direction.

The northeastern septic tank – Spouts disease at every bank.

A house can possess doorways and windows on all the four sides, provided the site is set to compass. They are kept in exalted positions or in the centre. The doors fixed to a grill or arches touching the ceiling can be counted as doors.

Internal doorways leading to kitchen, deity room, bathroom and toilet are not to be considered as door-ways, if they do not touch the roof of the house directly. Supplementary doors with grill or air curtains or mosquito mesh doors, etc., are not to be treated as doors. No importance is given to the number of doors or windows.

When a house faces east, the entrance should be fixed towards east, so that the door falls in the northern half of that side. Such a door yields good results, as it would be in exalted position.

When a house faces west, the entrance should be fixed towards west, so that it falls in the northern half of that side. The door would be in exalted position and contribute to the prosperity of the residents.

When a house faces north, the entrance should be fixed towards north, so that it falls in the eastern half of that side. Such a phenomenon augurs very well.

When a house faces south, the entrance should be fixed towards south, so that the door falls in the eastern half of that side. This will bring auspicious results to the habitants.

This has been revealed and established after experiment and experience.

Doors fixed in eastern or northern part of the house should be equal to or smaller, in dimensions and height, than the doors

Toilets adjacent to east and north ends – Spitting everlasting fire agents.

fixed in western and southern part of the house. In no case the doors in eastern or northern part should be bigger than their counter parts in west and south. The people residing in a house will prone to subtle habits like alcholism etc; if the doors of the house are fixed in eastern southeast, southern southwest, western southwest or northern northwest, since the movements through those doors are exiguous.

Doors in exiguous positions make the inhabitants prone to subtle habits like alcoholism etc.

Effect of the Number of Doors

Single Door : If only one door is to be fixed to a house, it must be fixed either in eastern or northern northeast. Then only the good effects of having a single door can be earned. Houses facing south or west cannot possess single door. This principle has to be followed invariably in respect of domestic buildings. However the rooms in southwest or northeast can possess single doorways.

Two Doors : If the plan envisages only two doors to a house, the same may be placed in north and south, or in east and west, or in east and north, but not in south and west.

The rooms in southwest and northeast may possess two doors. In case of the room in southwest, doors must be fixed in eastern northeast and northern northeast.

Three Doors : Placing doorways in three directions excepting east, does not augur well. However, avoiding a doorway in south, and keeping doorways in other directions is considered to be a good feature.

Attic attached to eastern wall – Creates a lot of panic in all.

Similarly avoiding a doorway in west, and placing doorways in other directions is considered to be a good feature. Avoiding a doorway in north, while keeping doorways in all the other three directions is not at all considered good. Three doors can be put to any room in the house, but at any cost the room in southwest should not possess three doorways. The intersecting walls can possess three doorways in a row.

Four Doors : If the site is set as per compass, doors can be placed in all the directions. However, the room in southwest should not possess four doors.

There is no harm, if another door is provided in exalted east, for the occasion, besides a door in eastern northeast of a house, facing east. The doors to the back-yard, can be put facing the above two doors. When only one is put to the backyard, it should be facing the door in exalted east. Instead when it is fixed in western northwest, it will make debilitated movement of southeast and northwest. It is inauspicious. Hence it is advised that when a single door is provided to the back yard in west, it should be in line with the door in exalted east, so that it may augur well with west and eastern northeast blissful movements thro' east and west doors.

Under some exigency, when another door is fixed in exalted south, besides a door in southern southeast of a house facing south, it is fair and well. As there are two doors in south, there must be two doors in west, too. Two doors into the backyard in north should be in northern northeast and exalted north. When a single door is put into the northern backyard, it will become exiguous, so a single door is to be provided in south. When there are two

Attic bearing with southern wall – Most beneficent to one and all.

pillars of gates and other pillars, of the house, should not face the doorways of the house. However they can face the corners, well, trees and pillars of the adjoining or opposite houses, on the other side of the road.

Significance of a Door-sill or Threshold

The main entrance of a house is compared with the mouth of a human countenance. Just as the face has a pair of eyes, a nose and a mouth, the main entrance of a house is supposed to possess windows on either side, and a sill or a threshold below the doorway, to give it the shape of a human face. The purpose of lips is served by the frame shutters, and the threshold. The utility of door-sill is compared with that of lower lip to a mouth. It is said that the threshold protects the household from perils, diseases and paves way for prosperity. The inner significance of a door sill can be appreciated better, if one looks at it as an obstacle for the insects, which stealthily crawl or creep into the house in its absence. The practice of applying turmeric powder to the doorsill is also backed by the scientific reason of restraining the insects from entering the house. However, the practice has become redundant now a days, with the introduction of paints.

But the usage of turmeric, an age old practice in India prevails as a practice, even today by beauticians in skin care and, by physicians as an antiseptic, and by housewives in cooking. Turmeric is also used as a curative, in treating certain skin diseases of animals and coughs of many kinds in rural India, in long past and now, too.

The door frames serving as entry and exit ways into the frontyard or backyard of the house must invariably possess threshold. The internal doorways leading to kitchen, bedroom, deity room etc., are exempted from possessing door-sills.

Attic on the northern wall – Most fatal to inhabitants, a fall.

The shrinking of the foundation under the door frame sometimes results in breaking of the slab or flooring under the main doorframe. Modern Vaasthu says that such a phenomenon need not be considered as a bad omen, as it may, at the most, cause an injury to the feet, if not crossed cautiously. To avoid all this, now - a - days, cement slabs are used under the threshold.

WINDOWS AND ALAMIRAHS

The orients have assigned great importance to windows i.e. to have two windows on either sides of main entrance. But, in these days, it is not possible, as the houses are small to hold two windows.

A window can be fixed towards south of the door, facing east and in the exalted place. Similarly, to the door, in exalted southern southeast, a window can be put towards west ; and one, towards south, to the door, put in exalted north west in the west. In the same manner, fixing a door in exalted north, the window can be arranged on west - side.

If there are doors to all the rooms, in row to the room having a door in exalted east, then to the room in the west end should have a door, if not possible, a window should be fixed.

If there is a door in southern southeast, there must be a door to the room in north end, window is not acceptable . Similarly, when there's a door in exalted west, then facing it, there must be a door in the east.

In case there exists a door in northern north east and there's a movement thro' linear doors, a door should be fixed to the south-end room. A window must be put, if door is not possible to that room.

If the house faces east and there's an adjacent house in west, there's no need of a window to be put there. In the same manner, for the house facing north having adjacent house on the

Stairs from east to west – Glorious boon to the host.

south, the window in south, need not be arranged. However, every door should have a ventilator, is better.

No hard and fast rule is propounded for the number of doors or windows. Maintaining exalted movements there can be as many doors as possible, as mentioned above.

A window in the opposite direction of a door of the room should be placed, when it is not possible to fix two doors, facing each other and windows in all four directions. This window can be fixed in the centre of the wall.

The window, bigger than the door in length should be fixed quite opposite to door. That window can be extended towards any side.

Two windows each in four walls of the room, can be fixed, in either ends of the lateral side. That is when there is a window in eastern northeast, there should be one in eastern southeast, for southern southeast there should exist one in southern southwest, for western northwest, in western southwest, and similarly for northern northeast there should be one in northern northwest.

The almirahs can be arranged in between or on both sides of these windows.

CONSTRUCTION OF STAIRCASE

Staircase is necessary to reach the terrace or the first floor of the house. It has to be constructed depending on the vacant space in and around the house, and the face of the house.

If an internal staircase has to be provided, the same may be constructed, in any room except the north eastern room and southwestern room. The steps should be designed in such a way, that they do not touch the eastern wall and a minimum interspace of three inches must be allowed in between the staircase and the wall. The steps should proceed either from north to south ; or

Stairs from north to south – Pave way to financial growth.

alongside or away from the southern wall from east to west ; or alongside or away the western wall from north to south and the above interspace principle may be followed in respect of the staircase towards north, to step up from east, to west.

If a linear staircase, is designed either in side or outside, steps should proceed either from east to west or from north to south initially and can turn towards any direction thereafter.

If a staircase has to be provided in eastern southeast, the **same** should be constructed away from the eastern compound wall, and the steps should proceed from north to south, and progress towards north after the landing, facilitating entry into the first floor or terrace in an exalted position. Through the balcony provided in the eastern north east part, in such a case if possible a balcony may be provided, in the northern part also.

If a staircase has to be provided in the southern south-west, steps should proceed from east to west and progress towards east, after the landing, facilitating entry into the terrace or the first floor into exalted place through the southern south east balcony. For this type of stairs there will be a balcony in the south. In such case, a balcony in north is a must, while a balcony in east is desirable.

If a staircase has to be provided in western southwest, steps should proceed from north to south, and progress towards north after the landing, facilitating entry into the terrace in an exalted position, through the western northwest balcony. When steps are constructed in west, there will be a balcony in that side. As such a balcony in east is a must, while a balcony in north is desirable.

If a staircase has to be provided in northern northwest, it must be constructed away from the northern compound wall. The steps should proceed from east to west and progress towards east, after the landing, facilitating entry into an exalted position through the northern balcony. In such a case a balcony in east is desirable.

Stairs in northeast or southwestern room ~ Drag the peaceful life towards doom.

In above cases the balcony should not be built on pillars, but only on cantilever beam.

If an internal staircase has to be provided alongside eastern and southern walls, such a provision can be made in any room except the northeastern and southwestern rooms. It has to be ensured that the stair case does not touch the eastern wall leaving an interspace of 3 " between eastern wall and the staircase. The steps should proceed from north to south, and taking a turn, progress towards west; facilitating entry into the first floor, in an exalted position.

If a linear staircase has to be provided along side southern and western walls, the steps should be designed in such a way, that they proceed from east to west, either touching or without touching the southern wall and after taking a turn progress towards north, facilitating entry into the first floor in an exalted position.

If a linear staircase has to be provided alongside western and southern walls, steps are to be designed in such a way, that they proceed from north to south, either touching or without touching the western wall, and after taking a turn, progress towards east, facilitating entry into the first floor in an exalted position.

If a linear staircase has to be provided alongside northern and western walls, it has to be ensured, that the steps do not touch the northern wall (leaving at least a place of 3" in between) and proceed from east to west initially and after taking a turn progress towards south, facilitating entry into the first floor in an exalted position.

SPIRAL OR CIRCULAR STAIRCASE

Spiral staircases are to be provided for houses facing east and west in southern southeast and for houses facing north and south in western northwest.

Stairs in southern or western room – Drive away the doom and bring in bloom.

In no case a staircase should be provided in northern northeast and eastern northeast. Above procedure holds good in respect of internal circular staircases too.

Note : While constructing a spiral staircase in southwest, it must be ensured that a cavity or well is not formed in the south-western corner, and if such a feature becomes inevitable, the staircase should be shifted at least 6 inches towards east or north. The stairs built outside the house should not be roofed.

ROOMS UNDER STAIRS

Every owner of a house always tries to use the space, sparingly to get the most out of it. For this, some constructions are being done. It is not impossible that some defects may creep in, as per Vaasthu. People used to construct bath rooms, toilets or stores under the landing of stairs. It is better to build them as per the tenets of Vaasthu.

If the house is facing east with a balcony in the east, the stairs be constructed in southeast. The stairs should proceed from north to south, then turning on the landing should proceed towards north to enter the balcony. In such construction, the bath room or store under the landing abutting the house will result in the increase of eastern southeast and effects badly. If the construction is inevitable, a pillar and a wall can be built in eastern northeast, touching the balcony, in line with the house, to ward off evils of Vaasthu.

If the house is facing north the stairs can be constructed in northern northwest, leading up from east to west and proceeding to east from the landing. When it is desired to construct bath rooms, stores etc, under the landing, the rooms, abutting the house, will increase northern northwest. So a pillar and a wall in line with house in front of the room in northern northeast, may

Stairs in northeast truncates the directions-Bearing heavy hinders innovation.

be built. The doors of the rooms under the landing will augur well, if they are in the exalted position, without any consideration of the direction what so ever.

When the house is facing west, the stairs can be built in western southwest. When rooms are constructed under its landing, it becomes unfavourable, as they are lower than the building. Hence such kind of constructions should be completely avoided. Similarly, no such construction be done under the landing of stairs, built in southern southwest of the house, facing south.

The stairs built outside the house, to reach the terrace, through the eastern balcony, there is a possibility of increasing southern southeast of landing when there is less space, while turning the linear steps. This is not harmful. Similarly the western southwest of landing of stairs in south will increase, when the space decreases at the entry to the balcony. This too is not bad.

While entering the balcony on the west, because of the decrease in space, the southern southwest of the landing will increase ; which is also not a foul. Due to linear stairs, the western northwest of the landing will increase, when entry into the northern balcony is made. Mind it, that this too is not an evil.

But, in any direction, under this kind of landings, bathrooms, latrines, stores or meter rooms etc., should not be built.

WELL OR BOREWELL

Meticulous care has to be taken in sinking a well or borewell in a site. The ideal place, for sinking a well or borewell in a site is northeast. It can be either eastern northeast or northern northeast. The shape of a well can be a square or round below the ground

In southwest build not stairs-Make not hollow as a catalyst of pains.

level but the structure above the ground level must invariably be round. This is so because any corner of a square type structure above the ground level may exercise some diagonal effect or focus on the house and the same is not a good feature as per the science of Vaasthu. It has to be ensured that the floor level of the platform around the well or borewell should be less elevated than the plinth level of the house and ground level of the arena in southwest. Further the platform should not touch the eastern or northern compound walls.

Points to ponder before sinking a well :

It has to be ensured that a well or borewell should not be sunk on the diagonal line proceeding from the northeastern corner of the house to the northeastern tip of the plot or site. It should be located either to the right or to the left of the line as per the availability of space in east or north in the northeastern portion of a plot.

Well or Borewell should in no case face the gate fixed to the compound wall, or be sunk in the northeast corner of the house.

The cover of the motorset erected near the well or bore well or the pumpshed, should be conical in shape. The shed should not touch the northern or eastern walls.

If a well or borewell or any depression is located in northern northeast such a feature results in congenial conjugal relations, continuity of lineage, financial well being and ensures rich and wealthy posterity, for many generations to come.

Rooms under southern southwest landing outside the house-Lower the

If a well or borewell or any depression is located in eastern northeast such a feature improves the social status of the owner by enhancing his reputation, besides showering the above mentioned advantages.

Locating a well or borewell contiguous to the house, even in northeast, is not advisable. It should be located only in the northeastern portion of the entire plot.

If for any reason it is not possible to sink a well or borewell in northeast, it can be arranged in east or north, as both the places are considered auspicious and favourable ones, specially, north for women.

Proverbs : *Well in the east - Showering boons all the best.*

Well in the north - Blesseth thee forever hence forth.

In case of wells or borewells in agricultural lands, there is some relaxation in their location, provided it is not possible to sink in northeast. In such cases wells or borewells can be located in southeast or northwest or southwest. However, it must be ensured that the pump house is located to the southwest of the well or borewell. The northeastern corner of the shed should not touch the well or borewell. Lastly the pulley bearing beam over the well should extend from south to north.

Forbidden places for sinking wells or borewells :

Under no circumstances a well or a borewell should be sunk in south, as it leads to accidental demise of the female members of the family.

Rooms under western southwest landing outside-Lowering the direction deplete the host as maid.

Well or Borewell should not be sunk in west, as it leads to the ill health of male members, besides causing them financial problems.

Well or Borewell or any depression in eastern southeast subjects the head of the family and his off springs to ill health, fire accidents and robbery etc.

Well or Borewell or any depression in southern south-east subjects female members of the house to ill health, vices, fire accidents, robbery and financial losses.

Well or Borewell or any depression in southern southwest exposes female members of the house to chronic and deadly diseases, financial losses and renders them, sometimes, characterless also.

Well or Borewell or any depression in western southwest subjects male members of the house to deadly chronic diseases and renders them characterless.

Well or Borewell in western northwest causes ill effects on male members of the family and subjects them to court litigation, financial losses, robbery and makes them lead disturbed lives.

Well or Borewell in northern northwest causes family squabbles between wife and husband and leads to elopments and deserting of house by female spouse, due to strained relations.

It is non - controversial and well accepted fact that the level of the plot in east and north should be less elevated, than west and south, because it augurs well. But, some contemporary writers on Vaasthu suggest that wells or borewells should be sunk, in east or north or northeast, or even in west, by quoting the examples from the oriental treatises, like Kalamrita, Vasistha Samhita,

Room under the landing out side the house in northern northwest envisages a pillar on par of the house in northeast - Crashes out poverty and brings in wealth foremost.

Sanatkumara Vaasthu and Vaasthu Chintamani. Here it must be understood, that locating a well in west, amounts to creating a depression, and the same is considered a very bad feature, as per any version of Vaasthu. The version, supporting sinking of a well in west, based on the belief, that west is the seat of the Rain God Varuna, seems to be a shallow concept, as it is paradoxical to the main principle of Vaasthu, forbidding a depression in west.

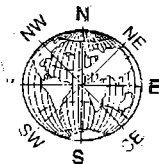

IDEAL PLACE FOR HEARTH (OVEN)

The most ideal place, for arranging hearth or oven, is the southeastern corner, of the southeastern room of a house. The cooking panel should not be arranged in a shelf, erected in the eastern wall. Such an arrangement increases eastern southeast. If a cooking platform is proposed to be built above ground level, the same must be built alongside the eastern wall with a width of one and half feet to two feet, duly ensuring, that it does not touch the northern wall. Alternatively the same may be built without touching the northern wall alongside eastern wall till the southern southeast corner and along side southern and western walls till the western southwest corner, leaving an interspace of three inches althrough, between the wall and the platform. The platform should contain a shelf below it, and in no case, a block should be built as platform. The hearth or oven should face west, and the person cooking, should face east.

When it is not possible to provide the hearth in southeast of the house, facing east; it can be provided in southeast corner of the north western room. It can also be provided in north-western room on western platform built without touching the northern wall. The dish, can be prepared by keeping face towards west.

If a separate kitchen room is proposed to be provided as an adjunct to the main house facing east, the same may be provided in the vacant space available in west, by raising a shed,

Room under the landing of stairs outside in eastern south east envisages a pillar on par of the house in north east - Makes the chode thrilling with joys and feast.

right on the compound wall, a sloping towards east, and hearth should be arranged in southeast. When there is a road or neighbours place towards west, a space of 2 or 3 feet may be left in between the road or space and the kitchen. However it must be ensured that the interspace between the kitchen and the main house should be less than the openspace on the eastern side. Further, it should be ensured, that the flooring level of the newly built shed, should be more elevated, than the plinth level of the main house. It is not necessary that the roof level of the southwestern room is equally high to that of the main house. However if R.C.C slab is built over the outhouse, it must be invariably ensured, that it's height is slightly more, than that of the main house.

If it is not possible, to provide for a hearth or oven in the southeastern corner of a house, facing south, the same may be arranged in the southeastern corner of the northwestern room, in accordance with the instructions, given above.

In case of a house facing north, arranging hearth in the southeastern corner of the southeastern room is most benificent and unparallel. If a kitchen exclusively proposed to be provided outside the main house, the same may be built in the vacant space available on the southern side of the main house, by raising a sloping shed from south to north, 2 or 3 feet away from the southern compound wall, and hearth should be arranged in the southeastern corner. When there exists a road or open space of a neighbour, 2 or 3 feet space should be left out. It has to be ensured, that the interspace between the shed and the main house is less than the vacant space between the northern compound wall and the main house. Further the flooring level of the shed should be higher than that of the plinth level of the main house.

In case of a house facing west, the best place for arrang-

An eastern slanting projection – Improves the health of males to perfection.

ing hearth, would be the south eastern corner of the south-eastern room. If a kitchen exclusively proposed to be provided outside the main house, the same may be built in the vacant space, available in the east. However it should be ensured that the interspace between the kitchen room and the main house should be less, than the interspace between the eastern compound wall and the kitchen. Further the flooring level of the kitchen should be equal to that of the main house. In no case it should be higher than that of the main house; lower than that, is not bad.

Under any circumstances, oven should never be arranged in northeast. Hearth in northeast exhausts all the riches like vapour and renders the male members impotent, and reduces them to the stage of destitutes. Arranging kitchen in northeast is nothing but self immolation. Sometimes it leads to loss or absence of male progeny.

The kitchen should never be arranged in east, south, west and north directions. Only the rooms in southeast and northwest be used for kitchen. The reason is obvious, as the sun light will be coming into these rooms in the morning or evening, which will not only keep the kitchen dry, void of damp and smell, but also destroy the harmful creatures, coming in for the waste or the droppings of food particles, sweet etc. Further the sun light or rays will help in preserving the vegetables, cooked food, pickles and other preservations fresh for many days. This is possible, when the sun rays enters the kitchen and which is possible only in the southeastern and north western rooms. Hence its an age old practice based on natural science. It has some positive indications upon the cook, as the fresh and cool air flowing in from both the sides will save him from the hot airs of the hearth. Some may also feel it better to have kitchen in north eastern and south western rooms, as the airs will also be there. But the south western room will augur well

A southern slanting projection - Destroys female folk and wealth without hesitation.

only when it is used as Master's bedroom. As for the northeast, it is most disastrous to have fire in it.

DEITY ROOM

One may be unaware of northeast, but the place of deity's room is quite familiar to all. That is why, generally small pedestals or pials, with or without a tower, are constructed in northeastern part of the house, for placing the deity. But people are ignorant of the ill effects of those pedestals or pials in northeast. However, if one is very particular, that the deity should be installed in northeast only, same may be done by providing a small cupboard within the eastern northeast wall, exclusively for the deity and the puja can be performed by setting on a mat only. Pedestal and pials can be constructed along with western wall for installing the deity. People are suffering with many a misery, as they built pials for the deity in northeast, unknowingly; and thus, welcoming curse rather than the blessings of God.

The sun is the soul and main factor of Vaasthu and the visible God. It is better to follow his natural way. One should pray by facing east to west, the resourceful directions of sun, the omnipotent.

PRAYERS FACING WEST

Muslims in India offer prayers facing west, no matter the mosque face any direction. Id Gah Minar, the prayer wall also, faces east and extends from north to south. It is constructed at 90 degrees calibrated to the north pole. The reason behind facing west is that Mecca, the holy city, is located towards west of India. However muslims of other countries offer prayers facing the direction in which the holy Mecca is situated. So for them, the holy city is the most concern, than the direction. We can find out

Slanting projection in west – Kills the health of the male and makes unrest.

directions, with the help of Idgah Minar, even in the Mid night.

Hindus also offer prayers facing west, as most of the temples and deities face east. Only in exceptional cases certain temples are built facing west and there the devotees offer prayers facing east. After all, the devotee is to face the deity to offer prayers.

The science of Vaasthu explains that construction of a temple facing west makes the east heavier as sanctum sanctorum comes up in east. Such temples do not attract riches. Our research has proved that temples facing east continue to flourish with millions of devotees and billions of money. Similarly temples facing north flourish rather than temples facing south. Lord Shiva's temple at Srikalahasthi and Lord Rama's temple at Bhadrachalam in Andhra Pradesh, are not able to flourish. inspite of the power and potential of deities, only due to the fact that they are facing west.

Sun is the creative and nourishing source to the creatures on earth and offering prayers to the planet is doing yeomen service to the living beings. Facing east or west, is justified as a gesture of gratitude. Hence prayers can be offered facing east or west, even at home.

APPORTIONING A HOUSE

Generally houses are constructed now a days with a view of letting out a portion for commercial or residential purpose. The Science of Vaasthu lays down certain rules for apportioning or dividing a house.

- 1. House facing East :** In case of a house facing east a portion or room can be built in southeast, and the entrance

Projection slanted towards north – Improves health of the female folk

for that room must be arranged in northeast. If such a room is built in northeast, it may cause movement through eastern southeast, which results in financial losses and ill health.

2. **House facing South :** In case of a house facing south a portion or room can be built in southwest, and the entrance for that room or portion must be arranged in southern southeast, which is a good feature. If such a room is built in southeast, it results in movement through southern southwest , and causes disaster to the female members.
3. **House facing West :** In case of a house facing west a portion or a room can be built in southwest, and the entrance for that portion or room must be arranged, in such a way, that it results in movement towards western northwest. If such a room is built in northwest, it results in movement towards western southwest, and causes ill health and financial troubles.
4. **House facing North :** In case of a house, facing north, a portion or room should be built in northwest, and the entrance for that portion or room should be arranged, in such a way, that it results in movement towards northern northeast, which is a good feature, yielding financial soundness, and good health, to the female inhabitants. If the northeast is apportioned, it results in a movement towards northern northwest, which results in misunderstandings and enmity among the family members.

All the aforesaid rooms or portions must possess entry doorways from out side and in no case, there should be an access from the main house from within.

While constructing an out house, it must be ensured that vacant space is left on all the four sides of the main house,

Room under eastern projection in southeast – Peace and prosperity booms a-mast.

so as to facilitate circumambulation. No house should be apportioned after its completion. The internal walls should run continuously, in a linear pattern and should not have bends or curves or cuts. Internal walls should not form angles within the house.

While constructing upstairs, in respect of a house resting on load bearing walls, the walls of the first floor should be of the same breadth of 18" , 14 " or 9 " respectively. Suppose the breadth has to be reduced, it should be ensured, that the walls of the first floor rest on the centre of the load bearing walls to ensure equal distribution of weight and to strengthen walls, too.

BED ROOMS

Life is to live and strive ; to appease hunger and taste ; full - fill want and wish . After the day long toil and turmoil every living being earnestly require Rest ; for that only the nature has endowed us with Day and Night. The rest is the sleep, in whatever form would be, viz the horse sleeps in a standing position; the dalfin in the sea, swimming with one eye closed ; the bat hanging upside down ; the hen perching on pegs ; the cat dozes like a ball in the corner.

Thus the nature blessed us and all the creatures with rest/sleep. Hence the bedroom is " the Heart of the House" for Man, the Paradise on Earth, for peace of mind, soul and body ; as we spend most of the time, out of our stay, at home.

Southwest is the most beneficent , in all the eight directions. Master bedroom of a house must be provided invariably in southwest. It can be provided in southeast, and northwest. Generally the eldest sleeps in south western room, the elderly, in

Room in southeast under southern pojection – Sweeps off the happiness of females, a broom function.

southeastern room, the next in north western room. In north eastern room only the children should sleep ; not the couple.

In a house of number of rooms the first born should sleep in southern room; the second one, in southeastern room, the third issue, in western room; the fourth child should sleep in northwestern room, which will by all means augurs well. The bed in the bedroom should be laid in such a way that the vacant space should be more towards east and north. Bedroom for the couple in east causes ill health. Bedroom in south keeps up good health. Bedroom in west gives peaceful and prosperous life. Bedroom in north results in financial losses. It is better that children be provided bed in east and north. People like to have a cool bedroom ; but it should have 60° F to 65 ° F of temperature ; as it is scientifically proved that coolness is injurious to health. One should not sleep with wet feet, advised Manu and Varaha Mihira.

WHY SHOULD NOT WE PLACE THE HEAD TOWARDS NORTH WHILE SLEEPING ?

The Science of Vaasthu lays down that the head should never be placed towards north while sleeping. The above principle is supported by the age old maxims and proverbs. Maxims : 1. Hath not give alms aloft. But, sleep with head to south about. 2. Lie not with head to north. Let a -mass they bind thee on forth. Medical science also says that, if the head is placed towards north while sleeping, the blood circulation to various organs of the body gets affected and causes migraine due to disturbed sleep. The joint research study of The Institute of Science and Technology, Bangalore and V.H.S. Medical and Research Institute, Madras has proved that the above principle is a correct one and an article was published in "Andhra Prabha" the news daily on 3-9-1985. The age old maxim which had been

Elevated addyards in northern and eastern north east – Derail the life towards holocaust.

ridiculed hereto fore, as bashfamous has come true as per the scientific research. While sleeping with head towards north, the organs of the body, which are away from the brain, will not get sufficient blood, resulting headache, insomnia and irritation.

Due to lack of blood supply to brain it was reported that the group of doctors and scientists had studied the effects of placing the head towards north while sleeping, on blood circulation in human as well as animal bodies, and established that the same effects could not be noticed if the head is placed towards south. They also studied minute variations in the flow of electric currents in human as well as animal brains, due to the geomagnetic effect on various organs of the body. It was also reported that the scientists are trying to find out whether change of direction in placing the head acts as a cure for Rheumatism. This proves the wisdom of our ancestors is as true as two and two makes four. If it is not possible to sleep with head towards south, it is better to place towards east; never towards north or west.

SLANTING PROJECTIONS

The Science of Vaasthu prescribes certain norms for bringing out slanting projections in various directions of a house.

The slanting projections in east and north should be less wider than the slanting projections in west and south.

In respect of balconies it is laid down that balconies in east and north should be wider than the ones in west and south, making east and north more spacious than west and south of the terrace.

The slanting projections should not originate from above the roof level, in case of houses facing east and north. They should originate below the roof level.

Room under western projection in western southwest – Proves to be beneficial to men's interest.

Rooms Under Projections :

In respect of a slanting projection in east, a room can be built there under in southeast, and the entrance should be placed towards north in an exalted position. A room in northeastern part should not be constructed.

In respect of a slanting projection in south, a room can be built there under in southwest, and entrance should be placed towards east, in an exalted position. A room in southeast is prohibited.

In respect of a slanting projection in west, a room can be built thereunder in southwest, and entrance should be placed towards north, in an exalted position. In northwestern part a room should not be constructed.

In respect of a slanting projection in north, a room can be built there under in northwest, and entrance should be placed towards east, in an exalted position. Do not construct a room in northeast.

The slanting projection should run throughout the length of the house.

Construction of rooms under the projections is purely optional and not obligatory.

CUP BOARDS

Generally cup boards are fitted with wooden planks, in the walls of rooms projecting forward. When it is desired to have cup boards in bed room or hall, they may be fitted in the eastern wall from south end to the north end or eastern northeast can be left blank in north; southern southeast should never be left blank.

Under western projection, a room in northwest – Banas male folk of their zest.

Similarly, the cupboards may be fitted in southern wall from east end to west end or southern southeast can be left blank a bit except southern southwest. In the same manner the cup boards can be arranged in the western wall ; or western north west can be left, but not the western south west on the south. The northern wall can be utilised fully. Starting from west the north east can be left; with no exception to northern northwest. When the cupboards are wanted on all four sides, the north eastern corner should be left blank.

The cupboards are prohibited in the eastern and northern walls of north eastern room. Almarahs, shelves and recesses can be arranged unprojected in eastern and northern walls.

BATH ROOMS

Bathrooms are constructed generally in three ways viz., out side the house, attached bathrooms to the bedrooms, and inside the house.

The bath rooms provided inside the house, should better be built in eastern or northern rooms. Attached bathrooms can be built towards east or north of the south western bedrooms. The attached bathroom can be built towards south to north western bedroom and towards west to south eastern bed room.

If a bathroom is proposed to be provided, in the front yard of an east-facing house, the same may be built away from the house in the southeastern corner towards the eastern side in line with the main house. Further the interspace between the main

Under northern projection, a room in northwest – A boom for female fold capital interest.

house and the bathroom, should be less, than the interspace between the bathroom and the compound wall. If that house has enough space in west, a sloping projection may be constructed 2 or 3 feet away from western compound wall, with roof sloping towards east and the bath room can be constructed in it.

The open space between the bath and the house should be more than the space in between the bath and the western compound wall. The flooring level should be higher than the plinth level of the house. Since the verandah is made of cement sheets, it does not necessitate to keep up the roof level. When it is made of R.C.C. slab, it should be equal or higher than the roof of the house; never be lessened.

In respect of a house facing south, bathroom can be constructed outside in the back yard in northwestern corner in line with, but away from the main house, duly ensuring that the interspace between the main house and the bathroom is less than the interspace between northern compound wall and the bathroom. Above method holds good even in respect of a bathroom in eastern southeast.

In case of houses facing west, back yard bathrooms may be built in east, based upon the principles, applicable in respect of houses facing east. If a bathroom is proposed to be built in north same may be built in northwest as mentioned in the case of a house facing south.

In respect of houses facing north, in eastward area, bathrooms in southeast, should be modelled on the analogy of houses facing east. Alternatively bathrooms can also be provided in front yard in northern northwest, based upon the analogy of

Heaps of stones and waste material in east – Fume away wealth and health to the least.

bathrooms to a house facing south. If vacant space is available in south, a bathroom may be built under the slanting verendah sloping towards north 2 or 3 feet away from the compound wall in south. When there is a road or someone's open place, in that side it should be built 2 or 3 feet away from it.

OVER HEAD TANK

Overhead tank of a house can be constructed in southwest, northwest or southeast corners. If an overhead tank is proposed to be provided in northwest or southeast, a small room on the terrace should be provided in southwest, duly ensuring, that the height of the room is more, than that of the overhead tank. If an overhead tank is provided in southwest any type of structure can be built in any corner of the terrace.

However the readers may get a doubt as to whether a water tank can be placed in southwest or northwest or southeast. The Science of Vaasthu clarifies that there should not be any pits or tanks or depressions below the ground level in those directions, but water tanks above the ground level or synthetic water tanks or any other type of tanks above the ground, can be provided.

Orientalists identify northeast with Lord Shiva in Hindu mythology, and opine, that an overhead tank in northeast propitiates Him, as He loves to bear river Ganga over His head. But while saying so they seem to have missed a very pertinent point, that northeast should be kept only as a vacant space and should not be overloaded by placing heavy objects, as such a phenomenon, makes the life of the inhabitants miserable.

***Room under eastern projection in northeast - Hits at master's
progressive crest.***

Northeast is so delicate , that it cannot bear even a straw. Unknowingly even, if it is loaded, the life will become disastrous. Hence, under any circumstances the tank should be built in northeast corner.

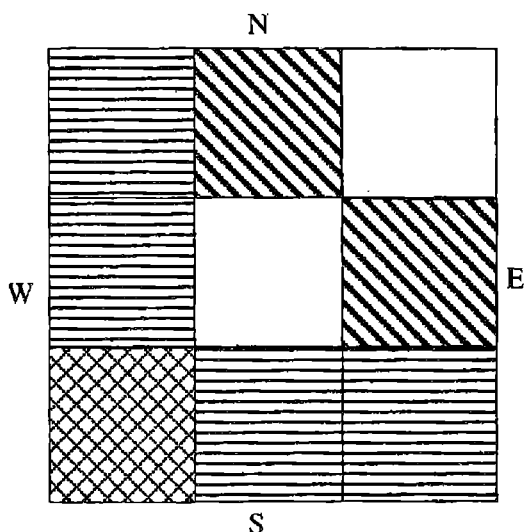

However if construction of an overhead tank in northeast becomes inevitable, then higher and heavier structures must be built in northwest and southwest, in such a way that southwest becomes the highest and heaviest, which will ward off the evil of Load in northeast.

TOILET AND SEPTIC TANK

In olden days there was no septic tank necessary for the toilets, which has become a must in modern days. The septic tank can be sunk in east or north. It should not be in any other direction. The most ideal spot for locating an external toilet towards east is in southeast away from eastern compound wall in line with the house, without touching its wall.

Orientalists, prescribe that southwest of the mainhouse is the most suitable place for providing a toilet. The modern writers also have inserted the same, in their book, due to lack of experience and original knowledge there of. But here also they had missed an important fact that the septic tank should not be located in southwest, as any depression in southwest leads to serious consequences to the inhabitants. However toilet can be provided in southwest, without a septic tank attached to it. In such a case it should be ensured that W.C. is fixed on a raised plot-form. The septic tank must be located in central north or central east. If toilet has to be provided in northwest the same must be built away from the northern wall and compound wall and in line with the house. Here also the septic tank must be provided in central north. The house plans, given in this book, can be consulted in this matter.

Upstair in the east – Hits bad the host.

-  Bath and Toilet
-  Only Baths
-  No Bath, No Toilet
-  Bed room with Bath and Toilet

The direction of W.C. must invariably be towards north or south. It should never be towards east or west as it amounts to disgracing the Sun. The above theory has been supported by the epic Ramayana wherein, facing east or west while attending, nature's call, is considered a sin against the Sun God and also a foolish action.

GRANARY

In some regions of the world the practice of storing food grains upto 2 tonnes under the ground is widely followed. The

Upstairs in southeast – Unbearable burden upon chest.

Science of Vaasthu lays down certain norms in this regard.

In case of houses facing east under-ground granaries must be provided either in eastern northeast or east.

In case of houses facing south under-ground granaries should not be provided in the front yard. Same rule is applicable in case of houses facing west.

In case of houses facing north under-ground granaries can be provided either in northern northeast or in north. The granary under the floor can be built, in all kinds of houses, in north or northern northeast or east or eastern northeast.

In respect of granaries above the ground level the suitable place is south or southwest or west. It should be borne in mind that granaries must be built on platforms touching south and west and more elevated in southwest, to yield good results. The barns should be placed in southwest, is better.

GOBER GAS PLANT

Of late the use of non-conventional energy sources is on the rise. In an agro based economy like India, Gober Gas Plants offer immediate solution to the power crisis.

For the installation of Gober Gas Plants a pit must be excavated to deposit dung and other organic waste. There is no fire in it, but it turns into a flame at the stove point. Hence the plant is not a fire point.

The science of Vaasthu suggests, that such a pit should be dug only in central east or central north, duly ensuring, that it does not fall in front of any door. If it is not possible the entire

Southern upstairs – Enhances wealth encore.

eastern lateral part may be subdivided into nine equal parts, the first two parts towards north constitute eastern northeast, and the last two parts towards south constitute easternsoutheast, and the remaining five parts in the middle constitute east, in which the pit may be excavated duly ensuring that it does not fall in front of any door. If precautions are not taken and excavated in southeast then it will result in defects of Vaasthu.

If it is desired to be in the north, it can be done, in the centre of entire northern lateral part, ensuring that it will not fall in front of any door. If it is not possible, the entire northern lateral part may be subdivided into nine equal parts, the first two parts towards east constitute northern northeast, and the last two parts towards west constitute northern northwest, and the remaining five parts in the middle constitute north where in, without falling in front of doors, as per availability, the pit may be dug. The evils of northwest pit will prevail upon, if it is excavated in the northwest, carelessly.

Locating the Gober Gas pit anywhere other than in east or in north, obtains for the inhabitants all the attendant ill effects as per the science of Vaasthu, described in this book.

COMPOUND WALL AND GATES

Procedure :

Construction of compound wall or fencing is a must for any house, as it protects the inhabitants from the negative effects of Vaasthu. While providing a gate to the compound wall following points are to be borne in mind, according to the tenets of Vaasthu described in this book.

Upstairs in southwest of the house – Brings boons and gifts to spouse.

In case of a house facing east, apart from providing a gate in front of the main door, another gate has to be provided in eastern compound wall at the mid point of the vacant area, in the northern part of the house. The second gate is very essential in the sense that the first one in east would be treated as an entrance in exiguous position in its absence and causes misery. Hence the second gate should be provided in exalted position.

In case of a house facing south, apart from providing a gate in front of the main entrance, another gate has to be provided, in the southern compound wall at the mid point of the vacant area in the eastern part of the house. The second gate is very essential in the sense, that the first one will be treated as an entrance in exiguous position in its absence, and brings in losses. So the second gate should be provided in exalted position in southern southeast.

In case of a house facing west, apart from providing a gate in front of the main entrance in west, another gate must be provided in the western northwest, in the western compound wall at the mid point of the vacant space available on the northern part of the house. The second entrance is very essential in the sense that in its absence the first one would be treated as an entrance in exiguous position. So the second must be provided in exalted position of northern northwest.

In case of a house facing north, apart from a gate in front of the main entrance of the house, another gate must be provided, in the northern compound wall at the mid point of the vacant space available, on the eastern part of the house. The second entrance is very essential in the sense, that in its absence

Upstair in the west – For the male chances are best.

the first one in north would be treated as an entrance in exiguous position. So the second gate must be provided in exalted north eastern position.

For the houses facing northeast, when the gate is in the centre or in exalted position then providing another gate is not essential. The gates should be always in use and should never be locked. Only one gate can also be provided in east, north and northeast. There should be a small gate in front of the main door of the houses facing south or west. If that gate exists in exiguous position, another gate be provided in exalted position. When the house facing south or west, have a gate in front of the main door, and is in exalted position, the second gate is not necessary. When it is essential to have the second gate, it can be provided in exalted position and there's no harm of it.

Compound walls in respect of houses, facing west or south, can be higher or lower than the main entrance door of the house. The houses facing east or west should be provided with the compound wall lower than the main entrance.

If the compound wall is dilapidated in southern or western southwest; or eastern southeast or northern northwest, it must be rebuilt immediately, without loss of any time.

It is not unusual that we may leave some open space in the east of our house, which will be the west to the adjacent neighbour's house, which is built right on its western border or with some open space. As an economy measure we may not build separate compound for our house in east, which will make that

Upstairs in northwest - Permanent Pandamoneum in the nest.

direction heavy due to neighbour's building and sap away the positive effect of Vastu ie. leaving sufficient space in east. Similarly it may happen in north, too. If it is the compound of the next house, there will be no objection, when we donot have our own compound. But, When it comes to the wall of the house of the neighbour, it will effect badly.

Hence in these two cases, to avoid the catastrophe, we have to build a seperate compound wall in our vacant place, in east or north. It should be at least 4 feet high 4 inches wide and at least 3 inches away from neighbour's wall. This wall should be lower than the walls in south and west.

There is no harm if door of a house, facing any direction, face the gate in between. But in no case the pillar of the gate should not face the centre of the door.

If northern northeast of a plot gets projected, due to the formation of a road, leading towards east, the gate erected in northern compound wall faces northern northwest, which is a debilitated direction. In such a case, the gate must be erected in the compound wall, so that it should face north and maintain equal distance from the house on both sides of it. Then it will yield good results.

If eastern northeast of a plot gets projected, due to the formation of a road leading towards north, the gate erected in the eastern compound wall faces eastern southeast, which is a debilitated direction. In such a case, the gate must be erected

Upstair in the north – Averts growth of weaun.

in the compound wall, so that it should face east and have equal distance from the house, on both sides of it. So it will augur well.

IN-LET IN A BIG GATE

Compound wall is a safety - wall in general, to any small or big building ; and so it has great importance, too. In general a big gate is provided for car and scooter etc., which is used at random. For frequent use and public movement generally an inlet or small gate is provided in the big gate.

The following hints are to be borne in mind, while providing an inlet / small gate in the big gate. If a big gate is provided in the exalted position to a house, facing east, an inlet be provided towards north. This will augur well, due to northeastern movement. Contrarily if it is made in south, it will lead to misfortune, as it would be in exiguous position

For the house facing south, the inlet be made towards east in the big gate, in exalted position. This will yield favourable results. If it the inlet made towards west it will yield uncongenial results. Anyhow there must be a gate in front of the main entrance.

When the house faces west, the inlet be provided towards north in the big gate in western north west, to get auspicious effects. The inlet made towards south will augur evil. It is a must that there should be a gate in front of the main door.

The inlet provided towards east in the big gate of the house, facing north, will make, blissful movements. If it is made towards west, this will become baneful with vicious movements. Hence to get best of it, as per Vaasthu, an inlet be provided in favourable and exalted position only.

Upstairs in northeast – Ruins the lives to the least.

GATES FOR HOUSING - BLOCKS

In cities many multistoried apartments are constructed. The gates, provided to each apartment in exalted position, may become exiguous, when it is taken, as a whole. To avoid this irksome position the following rules may be adopted for rectification and satisfaction.

The gate to the southeastern block on the eastern road side, is built in the east, taking it as the main. But it will be situated in eastern southeast, when the block is taken as a whole, in exiguous place. Hence, it becomes inevitable to place another gate in southern southeast, which will be in exalted position and ward off ill effects. If the block has main road in south, the gate may be provided in the south; but there must be a gate towards the road, in the east also.

If it is a south western block, a gate should be provided in southern southeast or western northwest, when the main road is in the south or west. When there are roads in south and west, the gates should not be provided on both sides. When it is a north western block and the road lies in north, the main gate must be put in northern northeast, along with another gate in western northwest without fail. This is because the gate in northern northeast will become exiguous to the block, while the northwest will be auspicious and exalted on the western road side.

For the north eastern blocks the gates must be provided in northern and eastern northeast directions.

In east the overhead tank – The power of males will not rank.

*****~*****

ADJACENT GATES ON BOTH SIDES OF HOUSE

It is a common fact, that people used to keep gates either side of their houses in the wall abutting the compound wall to facilitate the movement into backyard. There are some Vaasthu defects in such types of gates. So the following tenets be followed to avoid such faults.

The house, facing east, when provided such gates towards south in eastern southeast and towards north in eastern northeast, the southern gate due to eastern southeast movement, will become inauspicious, while the northern gate, though the movement is auspicious, will be faulty, because of touching the compound wall.

If it is unavoidable, the wall, where in the gate is to be fixed, should be built with a gap of three inches on both sides and the gates should be fixed towards south and north.

To the house, facing south, the gates are fixed in southern southeast and southern southwest, in the wall touching the house and the compound. This is wrong. It should not be done. Though eastern gate will make fair movement of southern southeast, it will be condemned by the southern southwest movement in west. When it is necessary, that can be done by constructing the gate - wall with a gap of three inches on both sides.

For the house facing west, to avoid general people, the gates in both sides of the house are arranged in the wall touching the compound in western northwest and western southwest. Though the northern gate is fruitful, the western southwest

*****~*****

***Overhead tank in southeast with a higher structure in southwest –
Enhances age to rank first.***

movement is baneful. Hence it is advised to construct the wall, in which the gate is provided, leaving a gap of three inches on both sides.

To the north facing houses, the gates on both sides of the house, are fixed in the walls, touching the house and compound, in eastern northeast and northern northwest.

Though the first is blissful, the second one is baneful. If the gates are essential and a must, the same can be done by constructing the gate - walls with a gap of three inches on both sides.

In all it is auspicious to have a free movement on all four sides of the house without any hinderance or gate anywhere.

ADDITIONAL YARDS

Ad-yard does not mean an adjacent plot. It means a vacant piece of land located away from the existing house, separated by a house or street. Ad-yards located in eastern or northern northeast, yield blissful results, and they must be less elevated than the existing one. In order to derive better results, adyards projecting towards northeast, located in the northeastern direction of the existing house, must be acquired. In no case, it should be in line with or fall behind the existing house, if an imaginary horizontal line is drawn. In such a case, it results in extension of northern northwest or eastern southeast, which are not good features. If the additional yards are bigger in size than the existing ones, the inhabitants and their posterity, would flourish in prosperity for many generations.

Erecting overhead tank in north – No doubt it drives out all the wealth.

Acquisition of an additional plot located towards east, north or northeast of the existing house, brings high fame and prosperity, provided, it is more projected towards northeast than the existing house. If that is not possible near the existing house, additional lands of the above description must be acquired even away from the house.

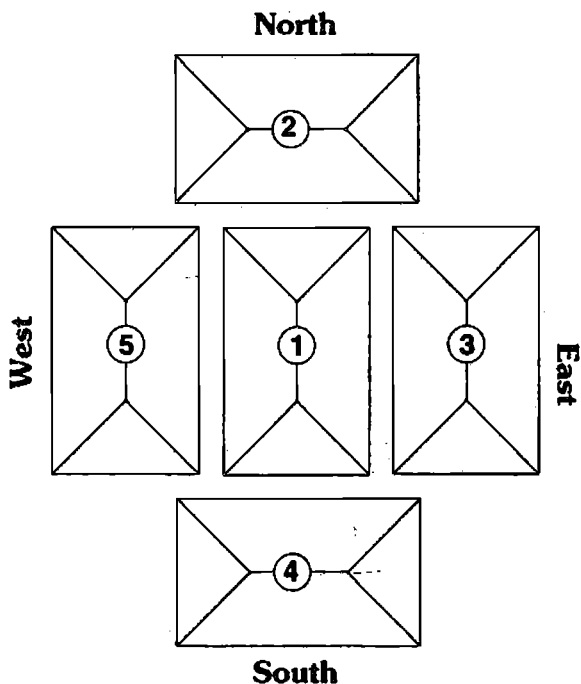

Such additional yards must independently possess projections and depressions in northeast and elevation in southwest. The distance from the main house is not an important factor. But frequent movement into and out of the additional yard is a precondition, to derive better results.

PINNACLE FOCUS

In the Science of Vaasthu pinnacle focus is a peculiar phenomenon. It can be seen in respect of the thached or tiled or other two - way - sloping terraces in the shape of 'A'. Such structures are generally found, in respect of ware houses, factories etc. This phenomenon arises when a two way sloping structure is constructed, abutting another two way sloping structure in a vertical direction to the first one. In the great war of Mahabharata, Karna attacked Arjuna, fiercely with Nagashtra, the Serpant missile, and it was just to head off Arjuna then Krishna promptly, with ariel swiftness, thumped the horses down and Arjuna tangled forth ; at which the missile took off his Kireeta, head wear ; and Arjuna was saved.

In such manner, the pinnacle focus can be avoided, by going down. How to avoid this evil phenomenon is shown in the following diagram.

Notheastern overhead tank - Leads out the host to penury rank.

In the above figure five two-side-slope houses are shown. No.1 is extended towards north and south while No.2 is east and west. If No. 2 is higher than No.1, it will have the focus of No.1 and will augur evil. Contrarily if it is lower than No. 1, there will be no evil focus. Similar results prevail on No.4 godown as No.2.

The constructions No 3 and 5 on either sides of No.1 will not face this evil focus, whether they are lower or higher than No.1, and do not effect adversely. It is not advised to build the western house lower than the eastern one.

If roofs of No.2, and No. 4 are levelled down from south to north there will be no harm. Similarly if the roofs of the new

Erect overhead tank in south – Enhance the choices of prosperity and growth.

constructions, when desired in east, are levelled down from west to east or south to north, this evil phenomenon can be saved. But, it should not be forgotten that, eastward construction should not be the higher one.

COMMERCIAL BUILDINGS

The Science of Vaasthu lays equal emphasis on domestic, as well as commercial buildings, as both the place of residence and place of work, play a vital role, in deciding the present and future status of a person. One must possess sufficient knowledge of Vaasthu to design one's place of work either office or business establishment, to reap the best advantages of Vaasthu. The Science of Vaasthu offers the following guidelines for the working class or business community.

If the business establishment or office faces east, the flooring should slope down towards east from west, and towards north from south. The business man or the owner of the business establishment should arrange his seat in southeast away from eastern wall, abutting southern southeast wall and facing north. The almirah or the cash box should be located to his left. Sitting in the same place if he prefers to face east, the cash box or almirah should be placed to his right. Pials or platforms should not be constructed. Tables and chairs can be used for seating. In no case they should occupy northeastern or northwestern corners. If possible they may occupy southwestern part; and a platform may be constructed or table and chair can be used and face east or north. By levelling up, seating can be arranged on the floor, too.

Overhead tank in southwest – Overwhelms with wealth abreast.

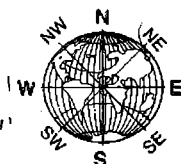

If the business establishment or office faces south, the flooring should slope down towards north from south, and towards east from west. The business man should occupy southwest, on pial or in chair facing east; and should place the cash box to his right. If he faces north, sitting in the same place, the cash box should be kept to his left. In no case the owner of an establishment facing south, should occupy southeast, northwest or northeast.

If the business establishment faces west, the flooring should be sloped from west to east and from south to north. The businessman should occupy southwest, on pial or in chair facing north, and should keep cash box to his left. Being in the same place if he faces east, the cash box should be kept towards his right. In no case the owner should occupy northwest, northeast or southeast, in a shop, facing west.

If the business establishment faces north, the flooring should slope from south to north and from west to east. The business man should sit on the floor or in a chair in the northwest, away from northern wall and abutting western wall. Sitting in the same place, if he faces east the cash box should be placed to his right. In case of facing north, by sitting in the same place a pial or table or counter may be arranged in southwest, but it should not be made in northeast or southeast.

Steps in respect of a business establishment facing east, should be built in northeast or they may be extended so as to run throughout the east. or else the southern half part of east may be left as a pial, while steps can be arranged in the northeastern corner. In such a case the steps should extend to northern northeast also.

Overhead tank in west be provided – Health for the whole family be invited.

Steps in respect of a business establishment facing south should be constructed in southeast. If possible, a pial may be constructed till the midpoint of south starting from southwest and the steps may be constructed in the remaining southeastern part. Semicircular steps may be constructed in central south. In no case steps should be constructed in southwest, as southwestward movement is not at all a good feature.

Steps in respect of a business establishment facing west, must be arranged in northwest. Alternatively a pial can be constructed from southwest till the midpoint in west and steps can be constructed in the remaining northwestern portion. Semicircular steps can also be constructed. In no case steps should be constructed in southwest. Further the pial located in southwest should be equal to or more elevated than the plinth level of the building.

Steps in respect of a business establishment facing north should be constructed in northeast. Alternatively steps can be constructed running entire north from northeast to northwest. If possible a pial can be constructed till the mid point of north starting from northwest and steps should be arranged in northeast. In no case semicircular steps should be constructed for business establishment facing east or north. Further the pial in northwest must be less elevated than the plinth level of the building.

'Balance' in a business establishment must be erected on a pedestal, alongside western or southern walls.

In northwest the overhead tank with high structures in southeast and southwest - Drives off disease and pain and knock out theft.

Show cases or stands or loaded cartons and bags should not be kept in northeast.

The owners, managers and chief executives of business establishment must arrange their cabins in southwest and they should sit either facing east or north. The entrance doors of such cabins must be placed in northeast, towards north or east. In no case doorways are to be arranged in southeast or northwest.

If dual shutters are provided for a business establishment facing east the northeastern shutter in the east must always be kept open, and the south eastern shutter, be closed, or both the shutters be kept open. In no case the southeastern shutter should be kept open while closing the northeastern shutter. Same analogy applies in respect of wooden doors, also.

In case of a business establishment facing south the southeastern shutter must be kept open while the southwestern shutter may be kept closed or both of them kept open; but vice versa is strictly forbidden.

In case of a business establishment facing west, the northwestern shutter should be kept open, while the southwestern shutter may be kept closed or both of them kept open; but vice versa is prohibited.

In case of a business establishment facing north, the northeastern shutter should be kept open, while the northwestern shutter may be closed or both of them; kept open, but vice versa is strictly prohibited.

The practice of leaving skyline in northeastern part of a building to facilitate entry of sunlight, is not a good feature as per the science of Vaasthu. Absence of roof at the confluence of north and east results in the closure of eastern southeast and northern northwest. Construction of parapet wall on the terrace results in cutting off of the northeastern portion. If the main idea is to facilitate entry of sunlight, projection

Right on eastern boundary construction ~ Leads pleasures and comforts to destruction.

in east should be removed in a uniform manner from northeast to southeast. If it is not possible in the east, projection in north can be removed in uniform from northeast to northwest.

FARM YARD AND HAY COCKS

Indian economy is predominantly agricultural. The prosperity and welfare of the people is, directly linked to the success of the farmer community, in producing the best from the soil. The Science of Vaasthu establishes and explains the tie, between the power of Vaasthu and the welfare of the farmer. It says that the location of a farmer's house, its farm yard, arrangement of hay cocks, cattle sheds etc., play a vital role in showering the blessings of Vaasthu. Any sort of casual approach, towards the location of farm yard and hay cocks, leads to dire consequences. Following are the guidelines, in respect of location of hay cocks, made on the basis of Vaasthu experiences and experiments.

Hay cocks are to be located towards east or north away from the farmer's habitat, in adjacent vacant lands, owned by him. Such adjacent vacant lands should be located in the northeastern direction of the plot. At present if there's none, it is better to acquire one, now.

Generally hay cocks are directed towards east and west, so as, to avoid erosion due to southwind. However if it is not possible, due to space constraints in towns, hay cocks can also be directed towards north and south, abutting west and south ends, duly ensuring, that the vacant space to the west and south of the hay cocks, is less, than that of east and north. Further, fodder from the hay cock must be removed from northern side only.

If a hay cock is directed towards east and west, it should be ensured abutting the ends on south and west, that the vacant space in south and west is less, than that of east and north, and fodder from hay cock must be removed from the eastern side.

*Construction of house along the road right on southern boundary -
Obtains good omens beyond worry.*

If the vacant site, where the haycock is located, has an approach either in east or south or in west or north, a gate must be erected in central or exalted position, i.e., for east, in eastern northeast, for south, in southern southeast; for west, in western northwest, for north, in northern northeast; and the above procedure should be followed in using the fodder.

The hay cocks can be arranged on timber logs or stone pegs or even on branches of tree as in Orissa. This type of hay cocks can be provided in any direction except northeast. When the logs, pegs or trees are far away from the house, these hay cocks can be arranged even in northeast direction.

RESIDENCES ABUTTING TEMPLES

It is often said, that residing in a house abutting temple, is not a good feature.

It has been proved, that as long as a house is constructed as per the science of Vaasthu, it does not matter, even if it is within the vicinity of a temple. Further a house can be constructed, abutting a temple on southern or western sides. However if a temple exists in north or east there should be an interspace between the two. It may not be surprising to note, that some people are residing in temple premises comfortably. The Science of Vaasthu has gone to the extent of proving that Gods and Temples are not above the Science of Vaasthu and any mistake in the design of a temple, casts evil effect of Vaasthu on the deities without exception. Same principle is applicable in respect of Churches, Mosques, Gurudwaras and other structures of meditation and prayer. It is also said that one should not reside within a radius of 200 yards from the temple of Lord Shiva, 40 yards from the temple of Lord Vishnu, 240 yards from the temple of Goddess Devi, and 16 yards from the temple of Lord Hanuman.

Construction of house along the road right on elevated boundary in west – Attracts name and fame behest.

Our research on temples and their positive and negative effects on their neighbours, has revealed, that existence of a temple in a specified direction, to any particular house, augurs well. The living example of Vara Somanna of Proddatur, will prove that residing in a house abutting temple is not bad.

Vara Somanna, a hamali of Sri Devara Shetty Subbarayudu Shreshty, has purchased a small piece of land with his savings and built a small room in southwest of the site, on our advice. There's a temple of Lord Rama in southwest of Somanna's house, which had a road in north. With the help and generosity of his owner, he started the business of pulses, and within a short time, he became a great businessman. There, in the site, stood two buildings and he is well off with his family. His four daughters and only son, are well settled, in their lives, after marriages.

The similar cases can be observed in every village and town.

VERACITY OF VAASTHU IN TOWNS AND CITIES

Some people opine that Vaasthu becomes ineffective, where thousands of houses are built in clusters, especially in places like towns and cities. This argument shows the height of perversion in thinking, and amounts to arguing, that diseases do not spread, where a dozen doctors stay.

We often come across instances of casualties in metropolitan cities, resulting out of accidents, intentional or unintentional, causing huge financial losses. We also come across people becoming multi millionaires, while staying in a particular house, and start incurring huge financial losses, after moving into newly built spacious bungalows, or meet premature demise or give birth to handicapped issues etc.

Our research has proved, beyond doubt, that such

*Construction right on the northern boundary – Drains avenues of
female happiness and prosperity.*

casualties occur, only on account of the ill effects of Vaasthu, in the newly built houses. In such cases, it is also revealed, that the builders had not consulted the experts on Vaasthu, or had not fully followed the suggestions offered, or the so called experts consulted, must be either amateurs or elementary students of Vaasthu.

It is said, that a house, however small it may be, if built as per the tenets of Vaasthu, definitely yields positive results on the inhabitants, and makes their lives comfortable. Ignorance or negligence in the matter of Vaasthu, ushers evil effects often heavily. The quixotic notions like nullity of Vaasthu in cities, prove catastrophic as the science of Vaasthu is ubiquitous. There are many unexplored fields in Vaasthu, to be discovered for the peace and prosperity of humanity, at large.

PROXIMITY OF RELATIONS

Some orientalists in Vaasthu hold that staying in houses adjacent or nearer to that of close relations is not a good feature.

The science of Vaasthu does not attach any importance to such versions, as they are not based on any sound logic, involving five elements or eight directions. Mere reason for such view might be, to keep away family squabbles arising, due to the frequent visits of the daughters-in-law or sons-in-law to their respective parents, to reveal their owes, due to proximity. Hence it is concerned to relations not Vaasthu.

BURIED DEBRIS AND RELICS UNDER THE EARTH

The exponents of Vaasthu down the ages have been contending, that debris of bones, or broken utensils, mud pots, charcoal deposits under the earth, must be removed, before

Out-house in southeast away from eastern compound wall – Is most beneficial to females all.

constructing a house. If that arguments were to be true, the inhabitants of a house constructed on a purified soil should lead happy lives. But in reality we find, that effect of acquiring a defective plot, or constructing a house against the tenets of Vaasthu, cannot be compensated, by clearing the debris of bones, broken clay utensils, mud pots, charcoal pieces etc., from out of the ground. Our research has proved, that those materials do not cast any type of effect on the inhabitants, as people living in Singareni Colories of A.P. are living happily in houses, built on coalmines.

Some exponents of Vaasthu suggest transfusion of soil or mud, from the foundation of a house, while renovating an old house under the process of purging or purification of soil. Our research has revealed, that this process merely adds to the expenditure. Purging, or purification as per Vaasthu, is nothing but levelling a plot. Modern science of Vaasthu strongly contends, that a house built perfectly as per Vaasthu, even in a burrial ground, yields the same result, as that of any other identical house, constructed as per Vaasthu elsewhere.

We all know, that right from the beginning of the process of evolution, innumerable creatures had taken birth on the surface of earth and died; and the process continues even today. The causes of their death are many, which include natural, as well as, unnatural, involving earthquakes, storms, cyclones, floods, wars, famines and other calamities. The relics of these mortal beings got burried in various layers of earth. It is not practicable, for any builder, to excavate and remove all the debris under the earth, in the name of purging or purification of the plot. Hence the logic of orientalists, that purging of a plot, involving excavation upto a certain level (neck deep or total height of the owner), before constructing a house, seems to be an inconsistent and shallow argument.

*Out -house in southeasi intact with the east compound wall -
Determines the ladies fall.*

Very opulent residential zones like Santacruz in Bombay, and Krishnalanka in Vijayawada, were once burial grounds. But the present day inhabitants of the houses, in the above areas built as per Vaasthu, are leading happy lives, inspite of the existence of burried relics under their dwellings. However the dwellers of those houses, not built as per Vaasthu, are facing attendant problems. Ever since the dawn of civilization many wars have been fought, and many cities have been built upon those relics; and they are surging towards a great future too. The example of the great cities of Japan, Hiroshima and Nagasaki, which were atom bombed during Second World War, also proves that relics under the earth do not make any difference, for the dwellers of a house built upon them. This seems to be an invention of an amateur of Vaasthu, based on the general human tendency of weakness viz., the fear of bones etc., Hence, this too, is a baseless prodigy. If it is accepted, that coal under the house is disastrous, then the coal cities would be nowhere.

Gulf countries are the richest nations of the world, inspite of the fact, that they have, below them, deposits of crude oil, emanating from fossils, burried forests, human and animal remains etc. This goes to prove beyond doubt, that any substance below the earth does not effect the residents of houses constructed there upon.

Human skeleton composed of 206 bones, serves as a frame, where in vital organs like mind, heart, lungs, liver, spleen, kidneys etc., are preserved. From the above, it is evident, that the bones are vital for giving a shape, weight, height and stature to the human body, which otherwise remains a lump of flesh and blood. Hence detesting bones burried deep under the earth, seems to be an irrational argument.

Southwestern out house – Adorns with celestial amuse.

LESSONS TO LEARN

Industry means hard work, for which the plant is its abode. The building and the workers there in are equally important, for the success of the industry. These are compared to seed and soil, where the industrial tree grows up, relying upon their quality. For a successful industrial establishment, the site and the building should be as per tenets of Vaasthu. Until unless the tenets of Vaasthu are strictly followed, it will lead to chaos for the entrepreneur as well as the labour.

Machines are an inevitable part of the industry. Heavy machinery be established in southwest. Other machinery, which is to be established under the ground may be established in east and north. Godown be constructed in southwest, while boilers be established in southeast, northwest and southwest.

The Master-cabin is being established in haphazard way. In the industrial workshop, facing east / west, the master cabin should be in south. Similarly it should be in west, when the gates are in north and south. For further details see chapter "Commercial Buildings".

While India is heading towards all-round progress in all fields, it is a pity, that necessary importance is not given to Vaasthu in the Public Enterprise Construction ; and even the great scholars of engineering are in the fold of blind faith and traditions. Alas ! a lot of precious knowledge is being lost into oblivion.

The age old definitions and laws are taking new turns according to the needs and wants of the country. Alike all other fields of knowledge, the engineers should take a step - up above cement, concrete, gravel and sand etc., and impress their research talent for all - round well-fared constructions and

An out-house in northwest on northern compound wall - Checkmate to the fortunes of all.

development of the country. But, the sense of selflessness and sacrifice are lacking. This shows their improptu attitude.

Instead of just taking the temporary benefits, the builders of the nation should sacrifice their personal profits and work whole heartedly for the nation with zeal and follow the real tenets of Vaasthu, lest it will be high time that the national wealth will go into abyss.

RELEVANCE OF VAASTHU TO A RENTED HOUSE

Some people question the varacity of Vaasthu, in respect of houses, taken on lease, on the plea, that Vaasthu lays its effect, only on the real owner of the house. But this logic seems to be analogous to the view, that journey in a redundant hired taxi would be more comfortable, than travelling in an owned vehicle, which is well maintained. Similarly we may also borrow the example of an umbrella full of holes which provides protection neither to the owner nor to any other person using it. In view of the above it may be understood that the power of Vaasthu is ubiquitous, and can be seen anywhere, even if the stay is limited for a few hours, in some inn or hotel.

An example. One of my friend rented a house, facing west, with street focus from western south west. The watertap was in south west. The house is built on eastern end, with an entry in southern southwest. The eastern room is elevated high. The kitchen is in north east, with open space in west. In all the defects bore a lot of evil upon the owner.

The man of everlasting smile, lost smile for ever, as the house laid him in paralysis, without any exemption of its tenents.

Out-house in northwest away from northern compound wall – Provides pleasures and fortunes at every call.

Many a time, I prevailed upon him to vacate the house at once ; but none heeded about my advice ; of course the effect is fatal, the demise of a youngman of only 30 years.

THINGS UNDONE

In some cases, the Vaasthu defects can't be rectified ; and the inhabitants there in, will suffer with poverty, ill - health and lot of worries. One of my friend once showed me a house and expressed his desire to purchase it, which has lead already three families into perils. Against my advice he purchased it, and lost a lot within six years only. It was high time, that he approached me for help.

The house is facing south, with more space in south than north. It is constructed on the eastern end ; with a projection in eastern southeast, viz., the eastern northeast is cut off which devastated the first born and doomed the owner, financially.

RELEVANCE OF SEAT

At Vijayawada on 4-9-86, our friend Sri Bhogineni Venkata Rathnam asked us to visit some abutting shops, in which for the 20 years, past same kind of business was going on, but in one he has become a millionaire while in the other, four have been changed and the fifth is in the turmoil.

Accordingly when we visited the place I was astonished to find the influence of place. Both of them are dealing pulses etc., business. My clarification is the person, sitting in south-west, had been blessed with its power and was made the richest. The second

Northeastern Out-house – Damn it, ate an abuse.

one, entering thro' southwest only, is sitting in northwest as he had no chance to sit in southwest. Hence he has lost favour of southwest. Our friend also had the same clarification.

Here arises the question. Why not the second one also be made to sit in southwest? Sorry. It can't be done, because there's the exit for the shop, in west. Had he been able to sit in southwest, he would also have become a millionaire. Alas! it is impracticable.

As we consult doctor in illness, so we should take advice from Vaasthu scholar, to rectify the defects of the house scientifically, or else it will yield disasters, never to be rectified or avoided, later.

VASTHU AND LIFE STYLE

While we were proceeding to Mutukundarupalli, near Brahmamgari Matham, I confirmed my remarks that Vaasthu is also a science, since it is also the outcome of nature and elements, sun, moon and sea. Later it has been confined to cast and creed and lead to its doom by some orientalists. As in medicine, one can cure the devastated life, by rectifying the defects of Vaasthu. I acclaimed that in the days to come, some one will invent a Vaasthu machine, to explain its significance to one and all; and make it available to all, without any discretion.

By that time we entered into the village, which was quite new to me. I saw a house near by, when we stepped down our car. It was facing east, having streets in east and north. The northern road lead from northwest to southeast, cutting off northeast and projecting northern northwest of that house. There

Heavy items in eastern part – Keep wealth and glory apart.

was a pial in northeast. From the house there was eastern southeast movement alongwith northern northwest exit in debilitated position. The total result of this, there will be no lineage. If at all there exists any, that will be an adopted one.

I asked a man near by whether the owner had any children. He answered 'Yes' Is the owner, an inborn of this house ? "No, he is adopted". It was my friend's chance to wonder. Then I told them that the defects of Vaasthu present in that house will out cast the first born. The standing - by replied that the elder son of the owner has become a fallen outcast and now devastating his parents, went to his matrimony.

I prophesied that there will be no male issue in the third generation and the house will become a female property ; and then again some one will be adopted to keep on.

When they doubted the power of Vaasthu, in such a manner, I explained it to them and to observe it with perseverance.

The vast science of Vaasthu can't be estimated in any known measure. If one is fully versed in tenets of Vaasthu, he can explain in detail the situation of inhabitants. Can any one show the inhabitants, living full of of pleasure, in house, which has more space in west and south than east and north ?

May the learned ones lead prosperous life in abodes of perfect Vaasthu, with pomp and pride.

THE PROP OF FIVE ELEMENTS

Vaasthu, a bond of five elements, can be moulded for the best of life thro' utilising, properly and promptly, the three viz., earth, water and fire, out of the five.

Southwest is peculiar. It should be elevated, heavy and correct to the setsquare. It will become light when well, borewell,

Items heavy in south - Enhances physical and financial growth.

septic pond or ponds are sunk, which will lead to peils. Since it has the earthen quality and bears love unto living beings, it should be maintained as per Vaasthu in constructing the house.

One should select a site, which is gradient in east and north; elevated in south and west ; non projected in eastern southeast, southwests and northern northwest ; uncontracted in intermediate direction. Contrary to it will enrage earth.

Similarly if we arrange fire in northeast instead of south-east, the fire will be outrageous. In the same manner, if we arrange water deposits in another directions instead of northeast, the water will wash out all our hopes in to the ocean.

When three of the elements viz., earth, water and fire are gracious, then the other two viz., air and sky will become benignant automatically. Or else, it is certain that invisible disasters will prevail upon. i.e., the delay in construction, loss of property or peace etc.,

For explanation an instance will suffice to prove it. There are hills in north and northeast of the central jail, Cuddapah; ' a natural non - rectifiable phenomenon. The south is open, and southwest is lower, with no structure of any kind, and a borewell in this corner. The main gate is provided in southern southwest. The northeast is cut off and there in is the kitchen.

For all these defects the inauguration ceremony has been postponed thrice and at last done in haste. There was a struggle between the prisoners and the police, when hardly elapsed two years. Who knows what will befall ?, except Vaasthu perversions!

Heavy items in west – An era of peace and rest.

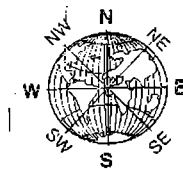

ADVICE TO THE HOUSE WIVES

This book gives in detail the positive and negative effects of locating deity, hearth, bathroom, toilets and heavier objects inside the house in various places. It also explains the reasons for growing hefty trees from southern southwest to southern southeast, and western southwest to western north west. Trees of any kind should not be grown in eastern or northern northeast. However tender plants can be grown there. Thorny trees like Zyzypus and Acacia Arabica should not be grown in the plot. If the vacant space in west is lesser than in east, the head of the family will return home, early.

1. The churning stick should be hanged or tied to a poll. The person, while churning, should face east. The hearth or oven must be arranged in eastern southeast of the entire house, in such a way that the person cooking faces east. It should not be arranged in a shelf in the eastern wall.
2. Drinking water pots should not be placed exclusively in northeastern corner or abutting eastern or northern walls. They should be placed directly on the floor in northeast, and no platform should be built for that purpose. In case the pot is proposed to be placed in southwest, a platform or pial can be constructed.
3. Broom sticks, pestles and other domestic objects must be kept only in southwestern corner and never in northeast, even for a short while. After sweeping the room the waste should not be kept in northeastern corner ; but should be disposed off, at once.
4. Dry grinders, wet grinders, mixers and other heavier gadgets, must be kept alongside southern, or western

Heavy items in north – Cause mental tension and feverish dearth.

southwestern walls in the respective rooms, as per convenience.

5. Almirahs and cupboards must be placed in southwest either facing north or east, but north the best. However a section of experts on Vaasthu suggest, that almirahs containing money and gold jewellery, must be placed in northeast and north. But these people seem to have forgotten the living fact of disaster, which had living experiences.
6. Refrigerators, dining tables, sofasets, shoe racks etc., must be placed in southern and western rooms, alongside southern or western wall.
7. T.V. antenna must be erected in southwest not in northeast.
8. The fodder for the animals can be arranged in south or west.
9. Attics can be built in kitchen or any other room with wooden planks, cement slabs or stone on southern and western walls. They should not be built on eastern and northern walls. If necessary, the attics can be built on all four sides.
10. Folding cots or other cots which are not in use must be kept only alongside southern or western walls, is better.
11. While sleeping, body should be turned towards left, is a healthy habit.
12. It should be ensured that the vacant space to the west of the house, is less when compared to that of east, so as to ensure that the eldest male member or the family head returns home early.
13. Construction of first floor in the western part of the terrace reduces the work load of the family head in his vocation and improves the chances of his career advancement.

Northeast side is heavy – Dearth of revenues and avenues curvy.

14. In order to ensure proper health to the head of the family and keep him free from cardiac problems, vacant space must be left on the first floor in eastern part.
15. Sufficient number of doors and windows must be provided to a house in northeast. When the room in southwest is provided with windows, then the room in northeast must be provided with windows sufficiently.
16. Waste water emanating from the kitchen should not be allowed to flow towards southwest, southeast, south or west. It should flow towards north east or half of north or east.
17. The feeder tub for animals should be arranged in southwest, southeast or northwest, away from eastern and northern walls.
18. Water can be put in tubs and pots etc; on the ground level. It should not be put in pits in southwest or southeast directions. The bathroom in southwest should not be gradient.
19. The building should be lower in north and east. This ensures long life to the spouse.
20. The kitchen should be towards southeast. The kitchen in northeast makes the house-wife more fatigued and worried, with no peace and entertainment. While facing east the hot air over the hearth will not pain us, as the cold air, running from south will sweep away hot air towards north or east.

This is a natural phenomenon, as the earth is moving from west to east. That's why the sun is rising in the east.
21. The sweeping should be done towards north or east, as the flow of air used to be towards these directions. Sweeping

Cupboard in eastern portion of a room – Depicts income and brings on doom.

against this will dust the face and nose, causing suffocation, sinus, headache and eye-sore, too.

22. At dusk the waste collected while sweeping the floor, should not be thrown out, immediately. There's a possibility of loosing some valuables, which can't be found then.

Thus we are capturing the natural power of five elements and utilising them for the benefit of human society.

Hope the house - wives will follow these methods and enjoy cheerful, peaceful and prosperous long life.

BASIL PLANT

Basil plant is grown in every house in India, by the Hindus, treating it as an embodiment of family goddess. It is an aromatic plant, and is known for its medicinal values. Many diseases can be cured, by consuming the leaves of the basil plant, or by simply inhaling the perfume or odour generated by it. Physicians of the oriental world had given this plant the status of an antibiotic, while the physicians of western hemisphere acknowledged the fact, that breeze passing from basil plants increases the longevity of the persons. That is why the science of Vaasthu attaches a lot of importance to the basil plant.

There are different varieties of Basil plants. They are (1) Krishna Basil (Basil named after Lord Krishna) (2) Lakshmi Basil (Basil named after Goddess Lakshmi the goddess of wealth) (3) Rama Basil (Basil named after Lord Rama) (4) Ground Basil (5) Black Basil (6) White Basil (7) Crimson Basil (8) Wild Basil and 9) Conine Basil.

Cupboard in southeast – Continuous source of exhaust.

According to the Hindu mythology Basil plant is variously called as Gramya (that which stays in villages), Bahumanjari (which possesses extensive tangle sheafs resembling locks), Bahupatri (Which possesses lot of leaves), Paavani (Which is pure), Vishnu Vallabha (Which is dearer to Lord Vishnu), Shoolaghni (Which acts as a panacea for pains), Surasa (which yields good juice), and Surabhi (which has good fragrance).

Basil plant is extensively used in Ayurveda (oriental science of medicine in India). It is said that the use of basil plant, in one form or the other, cures ailments relating to ear, nose and throat, apart from bronchitis, viral fever, vomitings, cardiac and skin diseases. It is said, that consumption of three leaves of basil plant per day, keeps a human being away from the doctor as it keeps off B.P; diabetes and cardiac illness. It is also said that the juice extracted from the basil leaves is an effective cure for otitis (ear troubles) and purifies blood. Application of the juice extracted from basil leaves alongwith lime juice, is adopted as a cure for all skin diseases. The paste prepared out of basil root is used as an opiate for scorpion bites. If you sleep on a pillow spread with basil leaves, the hair-pests will be completely driven away.

The Imperial Malaria Conference held in 1907 declared that Black Basil is prophylactic and cures Malaria. According to Adharvanaveda, the scripture dealing with medicine, Black Basil is powerful enough to metamorphose an ugly face into a beautiful countenance. Dr. Melding and Dr. Polana of the Imperial Institute of London had found out that the oil secreted by the basil plant spreads into the atmosphere very quickly and prevents air pollution and increases the longevity of human life.

Mr. Arvin Earnest had made many experiments in Ayurveda and finding the uses of basil has recommended it for many

Cupboard in south in the room – Enhances financial boom.

diseases: came and half tea spoonful of ginger extract, alongwith honey and basil'leaf extract, taken empty stomach daily will cure gastric troubles. The menstrual diseases in women will be cured if 30 ml of basil leaf extract is taken for 41 days.

Basil plant possesses thyamol, a curative of skin diseases, in a greater proportion. That is why it is used in the treatment of leprosy and snake bites. It keeps off the mosquitoes. Its extract cures all kinds of fevers.

Basil plant is generally grown in the house yard, in an exclusive structure, which is called a Basil Fort or Basil Brindavan. The science of Vaasthu lays down, that the Basil Fort must be erected in the yard, southern southwest or western southwest to western northwest, irrespective of the facing of the house. on a pial, more or less, higher than the level of the plinth. It can be erected in the open space of northern northwest, on less elevated pial than the house level with a circumabulation. If this is not possible, then the Basil fort can be erected in eastern southeast or southern southeast, less elevated than the plinth level.

If the Basil plant is grown in a flower pot the same may be placed in the southern or western portion of the compound walls in those directions. In no case such flower pots be placed on eastern or northern compound walls. Under indispensable circumstances the flower pot containing basil plant can be placed in any spot on a compound wall from eastern southeast or from northern north west till the mid point of that side. Basil Fort should never be located in eastern or northern northeast, nor the flower pots be placed in that directions.

Cupboard facing north in southwest – Endows bountiful wealth abreast.

GRACIOUS GROUND - THE FRONT YARD

In the strife of life, the wife, the sweet-life partner plays her role as a woman, Mother, Wife, Sister and Daughter with proverbial patience; and enhances the glory of the family for no returns, what-so-ever. Thus She is the wife and life of Man.

So, the House wife should rise early and open the northern door as per the annals of Vaasthu and Natural phenomenon. Since it is the feminine direction, it is auspicious, because the morning breeze will enfresh her and the air of the house will be purified and filtered, driving away the heavy and dozing air of the night. The door should be perfectly set with and kept open all the day; and be made safe with grills if it is the back door. Through this door precious sun rays come in to enhance our health and life, as they produce it vitamin 'D' in the body.

The wealthy people, living in A.C. room are getting many diseases, than the poor, who work in sun all the day round. Thus the poor are happy than the rich.

If there is no door in the north she should open then door in eastern northeast.

When there is an adjacent building in the north, the there should be one in south too.

If the east and the west are covered with adjacent buildings, and the main entrance is in the west, the eastern wall should be constructed leaving a lane of 4' wide to the neighbour's house. A slab in the east should be cut down to make a 3' wide balcony. then a door be fixed in eastern northeast direction in that eastern wall.

A chest in southwest facing east - Symbolises an everlasting financial feast.

The same procedure should be followed in the north, too, and the door be installed in northern northeast.

Thus that proformed front yard will grace the house with fortune and genius.

QUERIES ANSWERED

Had not the doubt crept in man, he dared not have crept into nature, and moulded it for self.

When, once, one is haunted by any doubt, its solely impossible to weed it out completely. Hence, it prevails upon and makes its stinck felt on and off, voraciously.

To such kind of doubts, received from several readers, the clarifications are given, in short; though a book is published seperately.

The rituals and rites are meant for purification of heart and hand and to mould a cultured man. But, the feeble minded people take them as disastrous doubts.

Many people prohibit to worship stone idols at home, which is sheerly baseless. Reverence is the prime concerned, than idol. One can worship one's totelary god in stone, in painting, or as he likes. Even the icons of Shiva can be worshipped in the house.

There is no use of wild mushrooms. So they should be removed at once. The echo - stone in the house disturbs the clarity of sound. So it is not to be worried of.

There is no logic in saying the entry of crow, owl

Almirah, facing east, in west - A permanent source of financial boost.

or lapwig into the house augurs evils or the owl brings all disasters; or the movement of crying lapwig towards north, augurs death. These are all the inventions of perturbed mind, and nothing else.

Showing the above mineatures under a microscope, the people are frightened and their weaknesses are utilised to make money. So there is no need for Shanti or Homa.

There is no harm to the people in a village, if there is one mansion in the village or there are three floors/storeys to a building. As far as they are built as per the tenets of Vaasthu, nothing is to worry about.

Can pet animals and birds be nourished in the premises ? is a common question. Pet animals and birds can be nourished in the premises. Their habitat should be in eastern southeast or southern southwest or western southwest or northern northwest. They should not touch the outer wall of the house or the compound wall and should be in line with the house. In no case there should be any structure of that kind in northeast.

Can a son lay a foundation stone, when his parents are alive?

This ritual is a respectable token of honour unto the elders. When the elders are absent at that time, a son, alongwith his spouse, can perform this ritual.

There is a doubt that when the northeast is cut off, how, with that kind of defect business men are earning a lot ?

This is not relied upon a single factor. After research, it is found, that when the house is cutoff in northeast, their business

Almirah in northern northwest - A source of financial unrest.

 establishment is found as per Vaasthu ; and vice versa. But this northeast distraction has bearing not on finances only, but on health, too. There is no use of having riches, when the health is lacking. In some instances, people living in defective houses are well off. The reason can be found out when their native and birth places are keenly observed; which have the bearing upon them.

Many easy - earning businesses, like soda water making, construction contracts, power politics and so on, are much attractive at first ; but, in a long run, it has been found in our observation, that they deserted the houses and thrashed to the ground, leaving no sign of their existence there after. So one should not be allured by such vices.

Thus the science, as observed, is endless and a-new for ever.

TEMPLES AND VAASTHU

The Science of Vaasthu proves that the power of Vaasthu is ubiquitous and the temples and shrines of Gods and Goddesses are also subject to its influence. Our research in this aspect had sufficiently proved the above concept and helped us in arriving at concrete conclusions regarding the power of Vaasthu on temples and other religious edifices.

LORD VENKATESWARA'S TEMPLE AT TIRUMALA

This temple was built by the royal dynasties, Pallavas and Cholas of Vijayanagar, strictly adhered to the principles of Vaasthu in an unparallel manner. That is why, it continues to be

Elevated pials in west - Ushers an era of rich harvest.

the second richest, and the most popular shrines of the world. The temple faces east and the deity is placed in west, facing east. It is covered by mountains on all the sides except northeast. Pushkarini, the holy pond is located to the northeast of the temple. A waterfall, popularly called as "Akasa Ganga", is located three kilo metres away from the temple in northern direction, and the same water is used for the holy bath of the main deity every day. Apart from the above, other water sources popularly called as "Vykunta Thirtha, Papa Nasanam and Thumbura Thirtha", are located in northeast and northern directions, at a distance of three, five and sixteen kilometres respectively.

Our study had revealed that the reason for the frequent road mishaps in Tirumala ghat and other calamities on Tirumala hills, lies in raising of some structures near the temple in undesirable directions, against the principles of Vaasthu. After the mishap of 1980, some of the defects have been rectified. Abutting the compound wall, outside the temple; where there's a counter for blest-food, the verandah is built along with eastern wall incompletely, cutting off the northeast; making it a defective structure. All the corners of the temple have been covered, and a terrace is built above the closed northeast, with a slope towards south. It is a source of sufferings of the pilgrims; as south verandah is an eel upon riches and women.

During my stay as the Vaasthu Laureate of T.T.D, I had worked hard and got many defects of Vaasthu rectified. But the indifferent attitude of the administration towards Vaasthu made me relieve of my responsibility. In my view the tenets of Vaasthu are inavertible, even for gods, babas or men in general theist or atheist, and it has its equivalent bearing upon them.

Pials in west, less elevated - Drag away towards ruin unarrested.

VARAHASWAMY TEMPLE AT TIRUMALA

Varahaswamy, the Boer incarnation of the Lord Vishnu, has a temple adjacent to the holy pond Pushkarani on Tirumala Hills. It is said that Lord Varaha is responsible for rehabilitating Lord Venkateswara at Tirumala, alongwith his divine spouses, Mahalakshmi and Bhoodevi, when the latter was roaming homeless. The epic relating to Tirumala prescribes that every devotee should offer prayers to Lord Varaha, before seeking the blessings of Lord Venkateswara.

But the power of Vaasthu is such, that the pond in south-west and the elevated bazaar/road in the north, and depression in south, southwest and southeast have not contributed to the popularity of the deity, despite the fervent appeals of the temple authorities to the devotees, to visit Lord Varaha's temple, before proceeding to Balaji's temple.

IMPACT OF VASTU AT SRINIVASA MANGAPUR

The impact of Vaasthu, is inavertable, and even gods are not an exception, can be seen at Mangapur near Tirupati. Though Sri Kalyana Venkateswara temple was built as per Vaasthu in the past, the recent additions to it, lead to the theft in the temple on 30 - 1- 85, besides the death of two temple guards.

This happened because :

- a) The northeast of main entrance has been elevated with earth, where the plants are reared.

Pials in south, less elevated – Financial growth faslty arrested.

- b) There's a well in southeast of main entrance.
- c) In the sanctum sanctorum a room has been constructed in 1980 abutting the east and north, resulting in the closure of northeast.
- d) The entrance is being done in eastern southeast, thro' pipes queue line.
- e) The south of the arena is lower; a 12 feet wide strip is depressed 2 feet from southwest to northwest.
- f) In the same manner the arena is depressed from western southwest to northwest.
- g) The north of the arena is more elevated than the south.
- h) There are paddy fields, down by 10 feet, in the south of the temple, outside.
- i) The northeast of the temple made heavy by the construction of big plot form near the main entrance, and fixed heavy stone pillars on the sides making northeast heavy. The above faulty constructions were added recently.

The house of Ramakrishna Reddy, one of the guards assaulted, has been explored, which has projection in northern northwest and contraction of northeast. Added more to it, the kitchen is in northern northwest. There's an open space to the south of the northern adjacent house. The compound of the house in west has increased southwest.

Thus resulted financial loss, death, suffering to woman; and

High-level pials in southwest – Positive catalysers for growth and rest.

bad characterisation of men ; due to loss of northeast, northern northwest oven, elevation in north and projection of western southwest, respectively.

SRI VARADA RAJA SWAMY TEMPLE AT KANCHI

History repletes with examples of temples and religious edifices, which had witnessed wide patronage and opulence once upon a time; and remained anonymous, subsequently. The reason for such phenomenon can be found in the changes, additions and alterations, effected to those structures and surroundings over a period of time.

The temple of Varada Raja Swamy at Kanchi, offers one such example. The pond located to the northeast of the temple dried over a period. "Anantha Sarasi" a pond in north west, though not much effective, has got its prominence. Other features of the temple are as follows :

- (a) The temple extends from east to west which is a good feature.
- (b) Vacant space in south and west is less when compared to east and north, which again is a good feature.
- (c) Besides the main compound, there's a square compound in four directions, with lanes to move.
- (d) The temple of Tiru Mangayalwar, located to the northeast of the main temple, is in a dilapidated state. The reason is nothing, but the existence of a waterless pond in southeast.

Pials in southeast more elevated than southwest – Cause concern about household health and rest.

- (e) Further the compound wall of the temple has towers in eastern southeast and western southwest. While a tower in western southwest is a good feature, the movement through southwest and eastern southeast are bad features.
- (f) The compound wall in south, is higher, than the walls in east and north.
- (g) The main entrance leading to the sanctum sanctorum is in eastern southeast. The path takes the devotees towards west and brings them before the deity, facing west.
- (h) In front of the entrance in eastern southeast, there's a Mantap with steps on either sides in north and south, projecting the eastern southeast.
- (i) In the southwest of Lord Narasimha there's a pond for drained water, nullifying all fortunes.
- (j) Goddess Perin Devi's temple is located in the southwestern corner, facing east abutting south and west walls. In between the mainporch and the temple there is an entrance in north. It's a good omen. But it has a well in southeast. The well, the pond in the northwest, and southwestward movement, are bad features as per Vaasthu. As a result, in 1985, there was a loot in which ornaments worth lakhs of rupees were lost. Subsequently a part of the stolen property was recovered, it is said.

If the temple administration is really desirous of reviving the glory of Varada Raja Swamy Temple, and other temples of the complex, the pond in northeast has to be renovated immediately, or else the income of the temple will dwindle down.

Pials elevated in South – Improve prosperity and health.

DEFUNCT VASTU OF SRI PRASANNA VENKATESHWARA

Kadapa, the thresh hold, is said to be the starting point to the pilgrimage to Lord Sri Venkateshwara of Tirupati, as it is the seat of Prasanna Sri Venkateshwara. It's an auspicious omen to have 'Darshan' of this Lord, before moving to Tirupati. The musicians and poets like Annamayya and Kshetrappa sung loftly in praise of this Lord, too.

King Anantha bhoopathi of Matla dynasty built the main entrance in west; as the diety is facing towards west : the hard factor of denunciation and disreputation, as per Vastu. The temple is built in three parts : main podium, internalia and sanctum sanctorum. In the same manner the temple of Sri Padmavathi is built, in front of the main temple, within the same compound, with lizards carved in the ceiling, which people used to touch to purify themselves from lizard-avarice. Recently new idol has been consecrated as the old one has been destroyed by the hooligans.

The temples of Vishwakshena, Andal and Nagaraja have been built high in northern north west of the compound. The northeast is covered with the construction of a podium. The holy pond is in northwest of the temple and being served with the water of K. C. Canal. Save in east, there are entrance in north, south and West. The open space in west is more than the double in east.

Since the temple has the above defects of Vastu, the lord of this temple has no accountable income, though the statue wholly resembles with Lord Sri Venkateshwara of Tirupati.

Low - level pials in east - Blesseth the household with zest.

AHOBILAM OF NIHIL VASTU

Erre Peggada, one of the Trio of Telugu Mahabharat poets has praised about Lord Lakshmi Narasimha of Ahobila in his book Narasimha Purana. Lord Vishnu, in the incarnation of Lion headed, killed Hiranya Kasipu and saved his devotee Prahlada. The celestials from Heaven exclaimed Narasimha as 'Aho Bala!', the power pareil, which, in course of time, slanged into Ahobila, a centre of piligrimage in Kurnool District.

In the northeast of the temple a room for carriers in 1933, was built due to which the northeast is covered. Similarly the southeast is covered. There is a pond in southeast, besides a well in, northwest and another one in southeast was dug in 1943 and 1985. A podium is built, abutting northern northwest, in 1972. During the construction a wall of it rolled down to ground causing the death of a couple from Prodduturu. Albeit holy consecration took place on 16 July 1986.

But, Vastu defects, dwindled the income of the Lord Lakshmi Narasimha, a lot.

Recifications to the temple.

1. The well in the kitchen in southeast is to be closed.
2. Another well be sunk in northeast.
3. The pond in northeast of the temple be renovated.

For Matham:

1. The door in southern southwest be closed.
2. The compound is to be rebuilt so that the northeast may increase.

High-level pials in east – Most fatal to the male host.

- *****
3. The compound wall in east be built for the open space, by reclaiming 15 feet of land.
 4. The toilet in eastern southeast has to be built without touching the eastern compound and the wall of the house.

LEPAKSHI, THE WING - LOST

When one looks at Lepakshi, a pilgrim centre of grand sculpture, in Anantapur Dist. will feel a lot at its grand past and dimunitated present, due to Vastu defects.

1. The northeast of main entrance is diminished.
2. There are southeastern and north western movements from the temple towards main road.
3. The northeast of first compound is covered.
4. The open space in west is more than in east.
5. Eastern main gate is kept closed always.
6. The open in south is more than in north.
7. The Kalayan Mandap in west, beside the well is incomplete and none cared for it.
8. A dimunitated pond of water is in west, outside the compound wall.
9. In the second compound, there is a door with western southwest movement.
10. The eastern lateral side of the second compound wall is shorter than the western side.

Iron chest in north - Causes constant money dearth.

- *****
11. Northeast of second compound is covered.
 12. Northern side is completely covered.
 13. Eastern southeast and northwest of second compound are also covered.
 14. There is a malicious open of 54' in south.
 15. Lord Vishnu abides in west of main mandap. There is open only in east and north. This gracious Vastu is responsible for the safety of the idol Vishnu, while others in other temples are broken and mutilated by enemies. The fall is mainly owing to the defuncted Vastu.

IMPACT OF VAASTHU ON PUTTAPARTHI

Prashanthi Nilayam, the holy abode of Sri Satya Sai Baba, is located at Puttaparthi in Anantapur district of Andhra Pradesh. The village is covered by mountains in the west and south, while the east and north are characterised by a sprawling low level terrain, for several miles. The site, where the Prashanthi Nilayam is built, is an elevated land, when compared to the surroundings. Moreover the road, leading from the northern part of northeast, has reduced the northeast; and made the Prashanthi Nilayam located at the south, a powerful one. The elevation of southwest and the depression of northeast, have made the Lord Venkateswara of Tirupati, an unparalleled God on earth. Puttaparthi also shot into prominence, only on account of the elevation in southwest. Construction of a massive auditorium in the west, and

Almirah in northeast – Makes dearth even for breakfast.

the cottages in the south, and leaving vacant land towards north, in "U" shape have contributed to the glory of Prasanthi Nilayam, as an abode of peace. The street focus of northern northeast, is responsible, for drawing millions of pilgrims and billions of money and making it second religious place in the World after the Vatican city, in Rome, Italy.

- (1) But the recent construction of a row, of retiring rooms for the pilgrims covered the east.

Proverb : Closure in east - Endangers males most.

- (2) The compound wall constructed on the eastern boundary has extended the eastern southeast.

Proverb : Eastern southeast extension - Books turmoil and perversion.

- (3) Prasanthi Nilayam, the abode of Baba has got roads on all four sides, and the above feature augurs very well. However the eastern part of the southeast is covered.

Proverb : Close not eastern southeast - Enflame not the avenues of peace and rest.

- (4) East and the northern northeast have been contracted.

Proverb : Closure of northeast - Closure of 'Life - Line' account.

- (5) Towards the northeast of Prasanthi Nilayam a multi-storied building has been constructed with roof level at the confluence of eastern and northern roads.

Pials, less elevated, in western northwest - Negative catalysers for wealth and rest.

Proverb : *Covering the northeast – Tightening the noose around the neck to rest.*

On 26-10-1990, during the erection ceremony of the holy top on the sanctum sanctorum at Puttaparthi, three Americans died in an accident involving the breakdown of the concrete beams, because of the above defects of Vaasthu.

Ever since 1987, the above facts have been published in all the editions of my Telugu book " Vaasthu Shastra Vaastavalu". None, even Sai Baba, is an exemption to the influence of Vaasthu or the Five Elements.

On 6-6-1993, two of the personal body guards of Baba had been assassinated, and four of his devotees died in police firing.

All these above mishaps have taken place due to the ill-effects of Vaasthu. The above proverbs are quoted from the book "*The Golden Proverbs of Vaasthu*".

Confession by the Author :

I am not omniscient, and I do not have, even the slightest, disregard towards Sri. Satya Sai Baba. My endeavour is, simply to prove, that Vaasthu is a science, and its influence is ubiquitous. On the invitation of the Prasanthi Nilayam Central Trust, I visited Puttaparthi on 20.6.1993, and explained the architectural defects, from the view point of Vaasthu, and offered suggestions to rectify the same.

High-level pials in north – Drudge up females happiness and health.

LORD MALLIKARJUNA IN SRISAILAM

One of the Trilingas, the linga of Lord Mallikarjuna is at Shrisailam, on Vrishabhagiri of Nallamala hills in Kurnool district. It is situated at an altitude of 458 metres above the sea level.

This plateau is nearly 85 sq.m. in area. Three kilometers away from the temple, the Krishna flows in northeast as Uttara Vahini, making it highly blissful place.

On four sides around the temple there's a lofty and strong compound. There's a Pushkarini in northeast. There are roads in four sides. The eastern and northern roads are sloped towards north and east, making the northeast gradient.

This is the main reason that SriSailam is second to Tirupati in Andhra Pradesh.

LORD OF SRI -KALA-HASTI

The shrine of the Lord of Sri,(spider), Kala (serpent) and Hasti (elephant) is at Kalahasti, on the shore of the river Swarnamukhi, in Chittoor Dist of Andhra Pradesh.

Its a pilgrim centre, very near to the world famous Tirumala Tirupati, and surrounded by very natural scenic beauty around.

Being surrounded by many hillocks, the temple of Sri Kalahastishwara faces west, with main gate in southern compound. The scenic and awe inspiring beauty of the sculpture in the temple supersedes even the sculpture of the temple of Lord Venkateshwara.

It is alleged that Sri Chakra has been installed by Shankaracharya of Kanchi, here alongwith Tirupati, to attract devotees and riches.

High level pials in eastern northeast – Drain out the glory of the host against.

Though Tirupati stood to the mark as one of the richest temple in the world, Kalahasti stands gasping at it. The annual income of the temple is very small and even the resources of the temple, 36 acre cultivating lands, are in litigation, and yielding very little. It is like fasting in the plenty.

The reasons for all these maladies are:

1. The Lord is facing west.
2. There are hillocks in east and northeast of the temple.
3. The river Swarna Mukhi is flowing in its west.
4. The main entrance is in south.

Thus the prosperity and income of the temple suffered, and a 'grand show' 'become a vain show' because the power of Vaasthu is lacking a lot.

TEMPLE OF GODDESS KANAKA DURGA AT VIJAYAWADA

Temple of Kanaka Durga at Vijayawada on the hillock, Indra Keeladri, is considered to be one of the eighteen powerful centres, where Goddess Durga is enshrined in various forms. Prior to the year 1980 the temple used to suffer from the ill effects of Vaasthu. During the visits to Vijayawada on business, I had the acquaintance of K. Shesha Rao, the executive officer of the temple, through Sri M. Rama Rao. Thanks to the efforts of the "Emperor of Vaasthu", Shri Mudragada Rama Rao who was instrumental in effecting various changes in the temple complex, such as increasing the northeast to the walls in front of the sanction sanctorum and placing the doors in exalted positions; including filling up of the tanks in west, despite of the protest of the priests and other board members; only due to the dynamic approach of the executive officer Sri. K. Seshu Rao. Consequently the

Basil plant in eastern-down - Keeps up the health of female benign.

temple's earnings increased from Rs. 20 lakhs per annum to rupees one crore per annum, now 14 crores P.A. He expressed his inability. when I pointed out some more vaasthu defects in the temple, during my visit, since the chairman of the board had gone to the extent of filing a case against him in the court of law.

After the transfer of Shri K.S. Rao some defects proped in. Doors have been fixed to surrounding Mantapa in western north west, central west, and western southwest. The last one must be closed immediately. However the temple of Lord Durga Malleswara has the following defects as per Vaasthu :

- (1) The eastern northeast of the temple is diminuted.
- (2) Eastern part has become heavy and elevated due to the structure on the eastern boundary ; curtailing the annual income.
- (3) The movement towards the sanctum sanctorum is through the northern northwest.

Proverb : Northern northwest movements - Drag off riches.

In view of the above defects the annual income of the temple counts to about Rs. 10,000 /-.

- (4) The way in southern southeast of Goddess has turned to be in southern southwest to the Lord.

Proverb : Southern southwest movement - Drains out wealth into silt.

While these defects effected Lord Mallikarjuna badly, the same ways of movement enriched the income to Goddess. Viz.

Proverb : The way in northern northeast - Enriches happyness to females most; and

Pials less elevated towards north - Bless the host with "Best Health".

Proverb : *The way in southern southeast – Makes the women enjoy the best.*

Lastly the road leading to Kanaka Durga temple complex pass through south and reaches depressed southwest.

Proverb : *Gradient towards south west - Head under serpents crest.*

This feature is responsible for the death of the devotees, in frequent road accidents. Our research has revealed, that laying an alternative road through northeast, would be beneficent in the interest of the ever increasing devotees.

SRI SHIRIDI SAI BABA OF KURNOOL

This temple is built in the north of the plot ; and eastern southeast, northeast and northwest are covered ; with the main entrance in western southwest. The northeast is covered with the construction of toilets and southeast with kitchen. Northwest is also closed. Above all, there is a big platform in the northeast near the well.

The auspicious effect of river Tungabhadra in the north, has been nullified with the above defects of Vaasthu though some of the defects are removed or rectified in 1994 and 1996. Even a devotee K. Ramaswami has lost every thing, when he took up the construction work in 1951.

So leaving the things, to God to look after the construction of any building should not be done against the tenets of Vaasthu.

Sri Saibaba's Mandir is an example to learn the horrible results of Vaasthu, when it is breached.

Elevated pials in northern northeast – Engrave the happiness of the females almost.

LORD RAMA'S TEMPLE AT BHADRACHALAM

Bhadrachalam is located in Khammam District of Andhra Pradesh by the side of river Godavari. Temple of Lord Rama faces west, and river Godavari is also located to its west. As per the Science of Vaasthu depression and water in west, is a bad feature. There is an unfavourable street thrust from southern southwest, where there's a double - stepped doorway, too - Goddess Laxmi is consecrated two feet high than Lord Rama in northern northwest. The office of the temple is established in southwestern cellar of the temple. That is why, the temple continues as a normal pilgrim centre, without pomp and ostentation. Devotees throng the temple complex in large numbers, only once in a year i.e on the birthday of Lord Rama. Above all, the builder of the temple, Ramadas, an ardent devotee of Lord Rama, was put in prison for some time on the allegation of embezzlement because of the above defects of Vaastu. To bring favourable income to Rama, it has been advised, (1) to close the southern southwest door, (2) to rectify and complete the mutilated north eastern corner and (3) de-level the seat of Laxmi. The temple administration is in favour of these modifications, except the cellar. Anyhow, if the modifications are done as per Vastu, Lord Rama, too, here will be prosperous, in future.

VAASTHU AT SIMHACHALAM

The lion incarnation of Sri Vishnu is at Simhachalam, above 300 ' the sea level , 16 km away from Vishakhapatnam.

Basil fort in south - A super protection to female's health.

The deity faces here towards west. In the east there are hills and it is down towards west. There are three doors facing the west, in a line, with no door in the east. The northwest has become heavy with the Kalyana Mantapam Celestial Marriage Hall. The northeast is high with hillocks like an incomplete compound wall.

The result is that the temple has been looted in 1975. The necklace of Jades, of crores of value, concerned to deity, has been taken away by the thieves. It is said, that a century ago a band of dacoits of Maratha, had also looted this temple.

MAISAMMA TEMPLE IN HYDERABAD

In the religious fervours of 1979, the temples of Bhagyalaxmi devi (Maisamma) and Lord Shiva, near Charminar in Hyderabad, have been ruined.

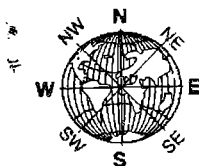

The Bhagyalaxmi temple is facing east, abutting Charminar in southeast. It is turned towards southeast, with a street focus of eastern southeast.

Proverb : Street thrust in eastern southeast - Beats at the sources of wealth and rest.

As to the temple of Lord Shiva, the stairs are in Garbha, touching the northern wall, leading from northeast. The well is in northwest.

The above defects made them the target of hooliganism.

Erect a basil fort in west – Ensure the healthy life for female a lot.

SUN TEMPLE AT KONARK

Sun provides a vital source for the process of creation on earth. This planet is responsible, directly as well as indirectly, for the survival of mankind on earth. Realising the importance of sun, ancient Indians constructed a majestic temple for the Sun God, at Konark in Orissa. But the splendour and grandeur of the temple did not last long. Our research has proved, that the evil effects of Vaasthu are responsible, for the short lived grandeur of the temple.

1. The site chosen for the construction of the temple is a low lying area, when compared to the surroundings.
2. The construction had increased northern northwest and southern southwest while reducing northern northeast and southern southeast.
3. The shape of the temple which resembles a chariot, projected east and chopped off eastern northeast and eastern southeast.
4. Consequently efforts to build a temple for Goddess Chaya Devi, in west did not fructify.
5. Its foundation in south west is less elevated, than that of the main temple.
6. The temple of Mayadevi, which is located to the southwest of the unfinished Chaya Devi's temple, is much more less elevated, than the main temple.

Basil fort in north elevation – Hopes of wealth are only a conviction.

7. The eastern entrance of the temple, had become redundant, with the construction of a 'Dance Podium', which blocked the way. As a result, the tower over the sanctum sanctorum, located to the west of the temple, reached a stage of dilapidation.
8. The entrance in south, had resulted in southward movement and the absence of a gate in north, together with the gate in east without use, reduced the grandeur and opulence of the temple.
9. The well in southeast had nullified the virtues of another well in north.
10. Existence of a well in southeast, and the construction of temples of Mayadevi and Chayadevi at a lower level in southwest, had resulted in the accidental demise, of both the sculptors of the temple.
11. Due to the above defects in the temple, the efforts of erecting the temple as per compass also, did not yield any good result.

INVERTED BHEEMUNIPATNAM

Where as the small villages are growing into big towns, there is an inversion, because of the defunction of Vaasthu.

It is true about Bheemunipatnam, in Andhra Pradesh, that this second municipality in India, under the British rule, and the oldest one, now is gazing at the growing cities like Vishakhapatnam, once a small village.

The inversion is due to Vaasthu defects. The municipal office is in the northeast of the town, besides the northern north

Basil fort in northeast – Never keeps the female at rest.

east is lost. The areas, which were included in this municipality, have increased its northern northwest, cutting off the northeast.

The northwest corner of the municipal office is projected and the movement is thro' northwest. The ruined building in eastern southeast of this office is in northeast to whole town. Towards northeast of this ruined house, there's a dilapidated two storied building. All this and all inverted the oldest municipality! It is the living example that the constructing from northeast is condemning the construction.

LORD VISWESWARA'S TEMPLE AT BENARAS

Benaras is one of the most popular and sacred pilgrim centres in India. The Vaasthu power of Benaras is such, that it used to attract millions of devotees, even in olden days, when communication system was not at all developed and when pilgrimage to Benaras was considered, as a passage to the tomb due to the existence of dense forests full of wild animals, on the way.

Our research has revealed that following factors are responsible for the unstinted glory of Benaras.

- (1) Holy river Ganges is located to the east of Benaras, and is flowing in such a way, that the eastern northeast is extended by leaps and bounds.
- (2) The flow of Ganges at Benaras is such that it flows from south to north upto a certain point and is called "Northward stream or Uttara Vahini" and there after flows towards

Grow not the trees in eastern part – Waste not the Vaastu potential and suffer a lot.

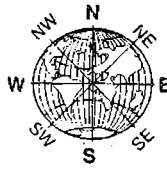

eastern northeast. This is the greatest favourable feature as per Vaasthu.

- (3) The temple has an entrance in south and there is a lane in south.
- (4) Inside the temple complex high structures are there in south and north.
- (5) The compound has entry points in north and west.
- (6) A function podium is located to the west of the temple.
- (7) The sanctum sanctorum has doorways on all the four sides.
- (8) The main deity is installed in the northeastern and less elevated part of the sanctum sanctorum.
- (9) The sacred water called 'Abhisheka Jala' flows out of the temple through the northeastern portion into a pit. There is a lane in east. The exit gate is in northeast.
- (10) The temple of goddess Annapurna is located to the southwest of the main temple. This feature of keeping the southwest high had resulted in great opulence and wealth of the temple.

TEMPLE OF SRI SATYANARAYANA TULSIDAS MANAS AT BENARAS

The temple of Shri. Satyanarayana Tulsi Das Manas is a legend in marble, and attracts tourists, who are enchanted by its aesthetic beauty, but the spiritual element is surprisingly missing.

Growing flower plants in eastern southeast – Blesseth the habitants with greater amusement.

This structure has an entrance in west and Sri Satyanarayana swamy is facing west. It is built in the shape of a rectangular hall extending from east to west with walking space around it. The principal deity chamber has, to its east, a museum. The hall has two floors, covered above. The vacant area outside the temple does not possess eastern northeast. This has resulted in extension of eastern southeast. This temple does not possess a perfect southwest at the confluence of south and west. However since the northern northeast is extended, this temple is enjoying popularity as a museum of moving wonderful idols, but is not able to cast a spiritual impact on the visitors, due to the defects mentioned above.

TEMPLE OF GODDESS ANNAPURNA AT BENARAS

Goddess Annapurna, the better - half of Lord Visweswara of Benaras, has her temple located to the southwest of the main temple. It has a lane in its northern side. The compound wall has an entry point in north. The main entrance of the sanctum sanctorum faces west. It has two other entry points in north and south, thereby taking the total number of entrances to three. The threshold or doorsill under the northern entrance is comparatively high. The temple compound has one more entrance in northern northwest. In case of this entrance too, the threshold or doorsill is higher than those of other ones. Inside the compound, there is upstairs in all sides ; and the upstairs in the west is high. It is a good feature. The temple has a well to its northwest a bad feature, of course. The existence of this temple

Trees growing in southern southeast – Inmates enjoy health and feast.

to the southwest of the temple of Lord Visweswara has become a positive feature for the latter and enhanced the income.

The phenomenon of three entrances to the sanctum sanctorum with no doors in east have kept the income of the temple at the lowest ebb.

THE SUPER VAASTHU AT ANNAVARAM

Lord Veeravenkata Satyanarayan's temple, at Annavaram was built only a century ago i.e. 6 Aug 1891; but enhancing its glory in all directions in a tremendous manner.

There's a big tank in northeast of the temple. The 'Tirumala Tirupati Devasthanams' guest house is in southwest. The way towards the temple is also from northeast. Whereas the southwest ditch in Vontimetta, kept the Lord depressed; the TTD Block in Annavaram in southwest, mounted the Lord, High, of grace and grandeur.

KANCHI KAMAKOTI PEETH

It is an indisputable fact, that Vaasthu governs the habitats of all types, including the hermitages and great monasteries. The Peetha of Kanchi in Tamil Nadu established by Paramacharya Jagadguru Shankaracharya, is considered as the highest seat of learning in oriental scriptures, and a custodian of the Hindu religion.

The following factors are responsible for the peerless power and glory of Kanchi Peeth in the realm of religion.

Trees grown in southern portion – In all respects its a complete protection.

The Ashram is located in a site belonging to northeastern block with roads in east and north. The main entrance of the Ashram is located in northern northeast. The abode of Paramacharya, the great preceptor, is located in the southwestern corner of the Ashram on a higher plinth. In the Ashram campus internal roads are laid in western and southern directions, with highly built structures. The main road extends towards northern northwest, resulting in a little amount of inconsistency to the inhabitants. For great sages and saints, who are generally moving from one place to the other, above feature proves to be positive catalyser.

VIVEKANANDA ROCK MEMORIAL AT CAPE CAMORIN

Swamy Vivekananda, the great disciple of Shri. Rama Krishna Paramahansa, was instrumental in spreading the message of Hinduism to every nook and corner of the world. He stood as the champion of Hindu religion, culture and heritage, and gave it a sublime place in the committee of world religions. As a token of gratitude for his yeoman services to the cause of Hinduism, a Rock Memorial had been built on the Zibraltor rock at Cape Camorin in India, which is attracting millions of tourists from India and abroad.

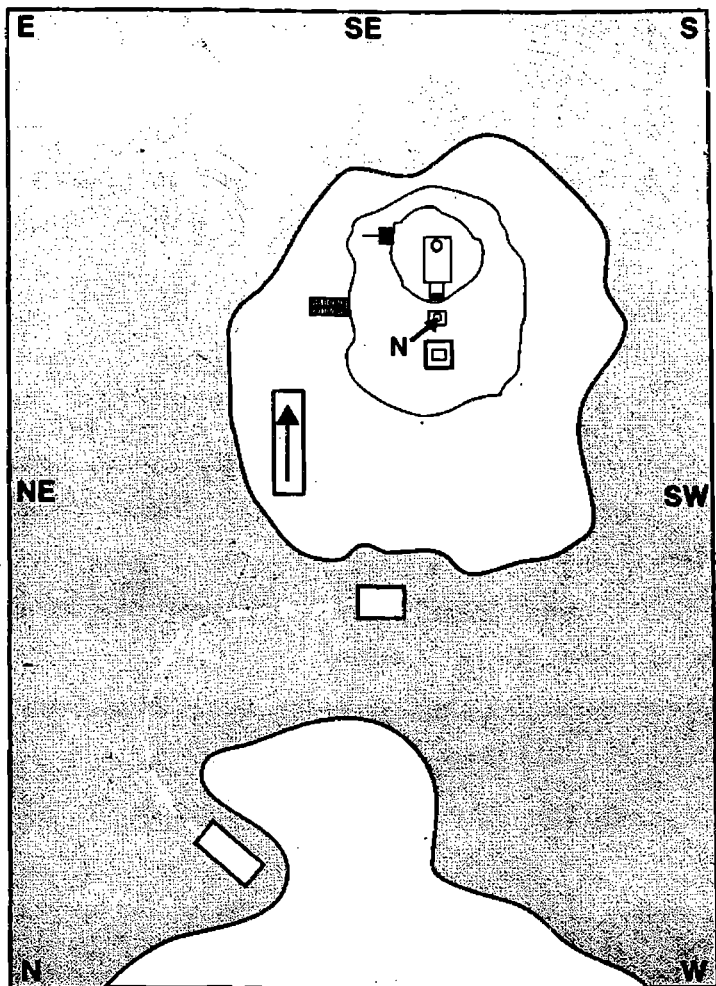

Following are the positive features of the Rock Memorial:

The water way leading to the Rock Memorial approaches it in northeast. The main pedestal is located at the centre of the

Trees in southern southwest – Embalm the health of female, the choicest.

Memorial where a beautiful, awe inspiring bronze statue of Swamy Vivekananda is erected.

Structural Layout of the Rock Memorial at Kanyakumari and it's Pathway

Trees in western southwest – Contribute a lot for the health of host.

The Memorial hall has a separate entrance in northeast near the podium.

Inspite of the existence of one more entrance in southwest, it has been made obligatory for the tourists to pass through the northeastern entrance only.

Tourists coming out of the Memorial, proceed finally through northeast, and southwest to board the vessel on their way back to the main land, in northeast.

The power of northeastward movement is solely responsible for the world wide glory of this monument.

VIRUPAKSHA TEMPLE AT HAMPI

Virupaksha temple at Hampi offers a classic example of the power of Vaasthu.

This temple is built in the western part of a rectangular plot, extending from east to west.

It has to its southwest, some structures (Viharas) relating to Jainism at an altitude of about six feet.

Passage to the main entrance passes through four intermediate entrances towards east.

The function podium (Mandapa) has entry points in north as well as in south.

In the northwest of the temple there is the tomb of Swamy Vidyaranya, the founder of the city of Vijayanagar.

Trees grown in west portion – Preserve health and provide perfect protection.

The temple of goddess Parvathi is located to the north of Virupaksha temple, and it has to its east, the temple of Goddess Bhuvaneswari.

The defective design of the northern compound wall of the temple, has resulted in chopping off of its northeast, by approximately ten feet resulting in the defective extension of northern northwest. However this defect is nullified by the existence of a pond in the northeast of the temple complex used for Boat Festival.

There are hillocks to the south of the temple.

The greatest positive feature is that, the river Tungabhadra flows here in north side from west to east.

The tower in east has Mandapas or podiums to its north and northeast which are contiguous to the compound wall in north and the tower in east.

Inspite of some minor defects of Vaasthu, the temple continues to enjoy popularity and patronage, due to strong and positive features, which are dominating in character. The unabated existence and glory of this temple, despite the collapse of all nearby temples in enemy attacks, stands as a testimony to the power of Vaasthu, till today.

LORD RANGANATHA'S TEMPLE AT SRI RANGAPATNAM NEAR MYSORE

Lord Ranganatha's temple at SriRangapatnam near Mysore, is another example of a structure, which stood against the ravages of time and elements, sheerly on account of the power of Vaasthu.

*Growing trees in western northwest – Bearing golden wings for
weathering heights the highest.*

It may be surprising to note that the famous warrior of South India, Hyder Ali, who was the chief of army of the Maharaja of Mysore, was an ardent devotee of Lord Ranganatha. Tippu, the son of Hyder Ali, who succeeded him as the army chief of Mysore, became the emperor of Mysore subsequently, and was called Tippu Sultan. During his regime Mir Sadique, a staunch Mohammedan, was instrumental in destroying many temples excepting the temple of Ranganatha at Srirangapatnam. Further this temple became an assylum for the idols of other ravaged shrines. The sole reason for the invincible nature of the temple, is nothing but the power of Vaasthu.

Positive Features :

The main entrance of the temple faces east.

The main deity Lord Ranganatha can be seen in a sleeping posture, placing head towards south.

To the left of the temple are located Mukha Mantapa (Facial Podium) Maha Mantapa (Great Podium) apart from another smaller podium.

The temple is situated in a plot extending from east to west.

The vacant space outside the temple in north and south is more or less equal.

The temple has roads on all the four sides and the road towards north is less elevated.

The road located to the north of the temple has extended the northeast.

Flower plants in northern northwest – Fortune stumped upon with growing zest.

There is a vast patch of low lying vacant land out side the temple in east, north and northeast with extended and depressed northeast.

To the northern road of the temple, at a distance of about 100 feet holy river Kaveri flows from west to east.

The approach to the river from the temple is through northeast, which is an auspicious movement as per Vaasthu.

The existence of river Kaveri to its south at a long distance has no effect on it.

Negative features :

Structures in northeast, southeast and northwestern corners of the temple have covered respective intermediate directions.

A well is located in the southeastern part of the temple to the northwest of the kitchen.

The erstwhile entrance in northern part of the compound wall had been closed.

Similarly erstwhile well in northeastern part outside the compound had also been filled.

Inspite of the above negative features of Vaasthu, the temple has been continuing as a holy recouperating abode of Lord Ranganatha since 12th century A.D, and prayers are being offered over the years by millions of devotees. The splendour of this temple can be further enhanced, if the closed entrance in north and the filled well in northeast are renovated.

Growing of trees in north – Day by day, drains the wealth.

CHAMUNDESWARI TEMPLE NEAR MYSORE

This temple is located near Mysore on a hillock. The approach road to the temple passes initially towards eastern northeast and with a turn to northern northeast reaches the temple. There is a street towards the east of the tower of the temple. The vacant land outside the temple also has a street in northern northeast. The temple faces east. The passage to the sanctum sanctorum passes through four smaller gateways. The podium located in the temple complex has an entrance to its south. The vacant land in north and south is more or less equal. There is a collapsible gate in the passage, leading from the vacant area in east, to the one in northeast. Podiums are built around the temple complex on all the four sides. The flooring of the temple is laid with a gradient towards east, so as to facilitate flow of water from west to east. The podium of 'Sapta Mathrukas' (Seven Incarnations of Mother Goddess) is located in the southwestern corner of the temple complex. The temple of Lord Lakshminarayan is located outside the temple complex in the southwest.

All the above positive features of Vaasthu have made the temple of Goddess Chamundeswari, Omnipotent.

SRAVANA BELAGOLA IN KARNATAKA

Sravana Belagola in Karnataka is a popular pilgrim, as well as a tourist centre. Lord Gomateswara, who is otherwise called Bahubali, is the principal deity of this historic centre. The monolithic statue of Bahubali carved on the hillock from a

Trees in northern northeast – For the women folk, a bite of venomous serpent

single rock. Bahubali is facing north, correct to the compass. A stair case is provided in northeast, to take the pilgrims on to the hill. It proceeds initially towards west from eastern northeast, there after turns towards north and finally takes the devotees to the feet of the Lord from northern northeast. Since the statue is erected right on the southern boundary, from south to northern northeast, in two turns, the pilgrims descend the hillock. There is no southward movement.

A perennial pond is located in the northern northeast of the hill. The passage to the village proceeds from the hill through northern northeast.

In view of the above positive features this pilgrim centre is able to draw, about three thousand tourists per day, and an income of about Rs. 50 lakhs per annum.

RAMAKRISHNA MISSION AT BELUR

Ramakrishna Mission at Belur was founded by Swamy Vivekananda to translate the ideal "*Service to Humanity*" of his great master Ramakrishna Pramahansa.

It is the head quarters of the gigantic institution, spread all over the world, working for the cause of humanity, by rendering selfless service preached thor' the ages from Gautama to Christ, prophet Mohammad to Gurunanak ; Narendranath to Ravindranath; saint and poet laureate Vemana to Mahatma Gandhi. Its power of Vaasthu lies in the following features.

- (i) Holy river Ganges flows to its east, the best of its features.

The eastern northeast trees – Poison the health of the male at ease.

- (ii) Some buildings exist towards west of the Mutt.
- (iii) High structures are located to the north of the Mutt.
- (iv) In south and southern southeast the temples of Swamy Vivekananda and Mother Sarada Devi, are located.
- (v) Some vacant space is available on the northern side.
- (vi) A garden is developed in the eastern northeast.
- (vii) The complex has street focus in southern southeast.
- (viii) The absence of eastern northeast to the neighbouring plot, located to the north of the Mission, contributed in a greater measure to its glory.

High structures in north, distraction of southwest, road from western southwest, residences of Ashram people and kitchen in north are some of the defects. Even then, because of the above best features, it bears its grandeur, specially to the Ganges like river Tunga to Shringeri Peeth.

SRINGERI PEETH IN KARNATAKA

Sringeri Peeth in Karnataka, is the first seat of learning, founded by the great preceptor of Hinduism, Jagadguru Shri Shankaracharya, to propagate the Vedic Vidya or learning of the scriptures. The grandeur and its power lies in the following positive features of Vaasthu.

The temple of Goddess Saradamba has a street focus in northern northeast.

The street located to the eastern northeast of the Ashram slopes towards east, till it reaches the river Tungabhadra.

Gradient towards east – Offers health and happiness behest.

The Jeeva Samadhi of saint Vidya Tirtha, the preceptor of the saint Vidyaranya, is located to the southwest of the temple and river Tungabhadra flows from south to eastern northeast and increases eastern northeast, to it.

The river is located to the north of "Narasimhavana" the habitat of the head of the Peeth and flows towards northern northeast. It's a tremendous favourable feature.

But a bridge is being built across the river Tungabhadra connecting the temple of Goddess Saradamba and Narasimhavana. This bridge falls to the southern southwest of the Jeeva Samadhi and to the northern northwest of Narasimhavana.

This construction undoubtedly acts as a negative feature as per Vaasthu. If the same bridge is built to the northeast of Narasimhavana, and southern southeast of "Jeeva Samadhi" it will enhance the glory and grandeur of the Peeth or else there's no wonder if the mishappenings like Puttaparti may be fall here, too, within 12 years.

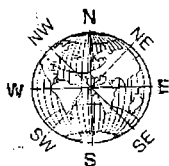

INDUSTRIES AND VAASTHU

Ideal factory concept :

The Science of Vaasthu attaches lot of importance to the construction of factories as they are the temples of technological revolution. These technological structures must confirm to the following principles of Vaasthu, in order to become remunerative and smooth sailed industrial ventures.

1. The main plant or machinery should be erected only in the southwest corner of the factory building alongside the southern or western wall. However, in case of machines requiring erection at a comparatively lower level than the

Southeast more gradient than northeast – Reign health aberrations more in the nest.

machinery installed at a subsequent level of the production process, steps should be taken to ensure that the subsequent levels of the machines are erected on a platform and in no case a depression or a pit should be allowed in southwest.

2. The main entrance of a factory should be fixed either in northern northeast or eastern northeast which are called the exalted positions as per the science of Vaasthu. However, if it is not practicable to do so, the main entrance may be fixed in other exalted positions like southern southeast or western northwest. The same principle applies in case of fixing the other internal doorways.
3. Wells or borewells should be sunk invariably in eastern northeast or northern northeast of the entire factory site, duly ensuring that they do not fall in the diagonal line proceeding from the northeastern corner of the factory building to the northeastern tip of the entire plot.
4. The overhead tank of the factory should be located in western southwest as that portion is supposed to be the highest or the most elevated part of the entire plot.
5. The underground water storage tank should be arranged only in eastern or northern northeast below the ground level.
6. The factory boiler, furnace, transformer and oil engine should be erected in eastern southeast.
7. The factory chimney may be placed in eastern southeast.
8. The roof of the factory building should slope either towards east or towards north. However if the roof is designed in such a way that it slopes towards east as well as west or north as well as south, in such a case it should be ensured that the eastern part or the northern part of the roof is more slant and less steeper than the other side (opposite side), and it should also be ensured that the pinnacle of the roof lies in

South gradient - Growth hindrance is imminent.

western or southern part of the factory building.

9. The office building or the administrative block should be located in either central north or in central east away from the compound wall, duly ensuring that the interspace between the compound wall and the building in east or north, is more than the interspace between the factory and the southern or western compound wall.
10. Lawns and greenery should be grown in north or east. Tall trees can be grown in southern, western or south-western or northwestern (western northwest) portion of the factory site.
11. The godown or stock room or store room should be constructed in the southwestern part or in southern or western part of the factory site. The raw materials, semi finished goods and finished products may be stored in southwestern, central western and northwestern portions, respectively, keeping the smooth movement of stocks in view.
12. Vehicles and car parking can be provided in northern-northwest or eastern southeast away from the compound wall, strictly adhering to the interspace principle.
13. Staff quarters may be constructed in southern southeast, or western or northern northwest of the entire factory site, duly ensuring that the interspace between the quarters and the compound wall in south or west, is lesser than the vacant yard of the residential block on the eastern or northern side.
14. Weighing machine may be located near the factory gate in central east or central north away from the compound wall, duly ensuring adherence to the above interspace principle.
15. Security office or guard room should be located on the southern side of the northeastern gate if the gate is placed

Gradient towards southwest – Head under serpent's crest.

in eastern northeast and on the western side of the northeastern gate, if it is placed in northern northeast.

16. Effluent treatment plant, if any, can be located in central north or central east, and the outlet should be directed towards northeast or east or north.
17. Toilets of the factory or the administrative block should be constructed either in southeast or in northwest, away from the compound wall but the pit or tank, if any, should be arranged only in central east or in central north.

Forbidden things as per the Science of Vaasthu in the Construction of Factory Buildings :

1. The northeast should never be closed or subjected to heavy weight or chopped off.
2. The overhead tank should not be constructed in northeast.

Note : Any defect in northeast leads to the closure of the factory due to inefficient management or I.R. problem or other internal or external causes.

3. The main entrance of the factory should never be located in the exiguous positions i.e. eastern southeast or western southwest or southern southwest or northern northwest.

Note : Entrance in exiguous position leads to the closure of the factory, due to court litigation or major accidents.

4. Wells or borewells or underground storage tanks should never be sunk in southern or southwestern or western or northwestern part of the factory site.

Note : Depression in south or west or southwest or northwest leads to financial losses and loss of life.

5. The waste material (scrap) or raw material or the finished

Gradient towards west – No hopes! Happiness also is lost.

products should never be deposited in northeast.

Note : Depositing scrap or any other heavy material in northeast leads to the scrapping of the unit itself.

6. The north western part of the factory site should never be closed.

Note : closure of northwest leads to the closure of fortunes.

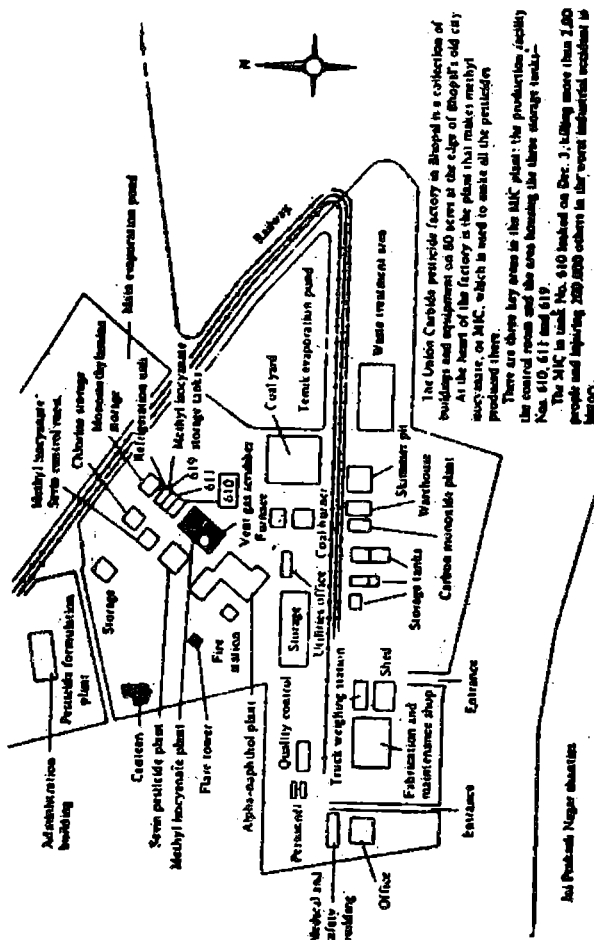

Instances of casualties, due to non-adherence to the principles of Vaasthu in the designing of factories, and other constructions:

UNION CARBIDE FACTORY AT BHOPAL

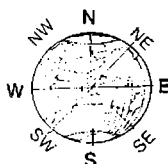

This unit shot into prominence due to the Bhopal Gas Tragedy in 1985 on 3 Dec. The accident resulted in the death of more than 2000 people and injured about two lakh persons. A visit of our team to Bhopal revealed the following defects in the design of the factory from the angle of Vaasthu.

- a) The main entrance of the factory is located in southern southwest, with a road in south. The southern lateral side is straight for some distance, and went on increasing southern west, there after.
- b) The entrance placed in the southern side of the factory is in southern southwest of the whole factory. There is another gate, with in a short distance.
- c) Since the southeast of the factory is Nil, consequently the southern southwest has increased.
- d) Added to the above features there are two borewells in the southern southwest of the factory.
- e) The western northwest has also slightly increased.

Northwest more gradient than northeast – Nowhere the hopes are high, loss at last.

Gradient towards north – Chances are bright for financial growth.

- *****
- f) A railway line is laid in the northern part of the factory site, well above the ground level, in a semi-circular shape. the compound wall suffered with defective design. The compound in north, is also defective and is built with several bends.
 - g) Northern northeast a bit cut off, southern southeast is completely lost, and the east is projected. Similarly the eastern northeast had also suffered a cut, due to the defective design of the compound wall on the eastern side ultimately the east lateral side has lost northeast.
 - h) The topography of the factory site reveals, that the southern and southwestern parts of the plot are less elevated than the northern parts. The southwest is low even out side the compound.
 - i) The factory buildings are constructed in the site, extending from northwest to north.

The presence of all the above defects has lead to one of the worst industrial disasters of the century and consequent closure of the factory and unending court litigation.

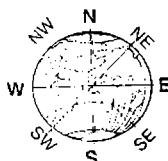

Proverb : Southern southwest gate. Is black cobra venomous bite.

However, the short lived glory of the factory was due to the existence of a small waste water pond in the low lying

Gradient towards northeast – Enforce all round development never to lost.

Gradient towards north – Chances are bright for financial growth.

However, the short lived glory of the factory was due to the existence of a small waste water pond in the low lying

Gradient towards northeast – Enforce all round development never to lost.

eastern part of the plant and due to the 'Street Focus' of the railway line in eastern northeast.

TAMILNADU BRICK PLANT AT CHAMARAMBAKKAM

The above brick plant was inaugurated in 1968, and had been subjected to frequent closures, on account of strikes and lockouts, till it was finally shut down in the year 1987. The following features are responsible for the closure of the plant, from the view point of Vaasthu.

There exists a vast vacant space in southwest due to the extension in south and western parts of the site, and lowered in western southwest.

The northern fencing line has reduced the northern northeast by 75 feet and the eastern northeast by 150 feet.

The existence of a substructure of the main factory shed, towards its north, has literally closed northeast and northwest of the plant. Another adjunct of the second shed has reduced the northeast and the northwest of the plant.

A small pond is located outside the factory premises in the southeastern part.

The existence of all the above defects, has ultimately lead to the closure of the factory.

*South east, northwest and northeast more gradient than southwest –
Cheerful life bounce the heart.*

CHAMUNDI MOPEDS AT TUMKUR

This factory is located 4 km. away from Tumkur in Karnataka. It was commissioned at an outlay of Rs. 40 crores. It was expected to provide employment to 750 workers. It was started in 1985 and was closed in 1987, due to permanent lockout. The following are the defects as per Vaasthu in the above factory.

The eastern northeast of the factory site is cut off.

There is a tank outside the factory premises towards southeast.

The northwestern part of the site is the most elevated portion of the entire plot. The northern lateral side is totally elevated.

The plot adjacent to the factory site is more elevated by four feet in northwest and eight feet in northeast. It lowered gradually from north to south.

The southeastern portion of the land is less elevated than the northwestern portion by nearly 10 feet.

The compound wall in the south has extended the southern southeast.

The factory building is constructed in such a way, that it extends from east to west, leaving south as a low lying area.

The northeast is cut off by the construction of the factory building. Consequently eastern southeast is extended and has become a low lying area.

Land elevation in east – Fatal to health and wealth at the last.

The floor level of the shed, constructed towards the north of the painting shop, is more elevated than that of the factory by 2 feet.

Despite the fact, that the overhead tank is located in southwest, the existence of the underground storage tank in the same area, has neutralised the beneficial effect of the overhead tank.

In view of the above defects the factory had to face a premature closure.

SUPRA FUSION WELD INDUSTRY AT TUMKUR

This factory was established to produce welding rods for industrial use. On account of the following defects in Vaasthu the factory had been closed.

The road is on the eastern lateral side of the factory. It is lowered towards south, naturally.

Vacant space in north is negligible when compared to that of south.

The openspace in the east is 20 feet while the openspace in the west is about 100 feet.

The southwest has been extended, due to the erection of a barbed wire, in the west.

Quite against the principles of Vaasthu, site is more elevated

Land elevated in south – Bearing star of health and wealth.

in east and north than west and south, and more elevated in northeast by 8 feet than southwest.

A strong compound wall is constructed on the eastern boundary and the main gate is fixed in eastern southeast.

The main entrance of the office building is also placed in eastern southeast.

Above all, the worst feature is, that the entire factory building is placed in the northeastern part of the whole site, making the northeast heavy and burdensome. So it fused off.

ALLWYN REFRIGERATOR FACTORY AT NANDALUR

The foundation stone of the Allwyn Refrigerator Factory at Nandalur was laid on 3-4-87, by the then Chief Minister of A.P. Shri. N.T. Rama Rao. The factory suffers from the following topographical disadvantages as per Vaasthu.

There is a tank in the southwestern side of the factory site.

There are hillocks in the northeastern, and northwestern and southeastern directions of the plot.

The hillocks located in southeast, northwest and northeast are higher than one another, in size respectively, quite opposite to, what they should be, as per Vaasthu.

The road in the eastern lateral side of the site has reduced the northeast.

Land elevated in southwest – Establishes the host as the first and foremost.

All the above defects of the site had been brought to the notice of the government of Andhra Pradesh, and an ideal and alternative site, within a distance of 10 kms from the proposed site, was suggested. But the government went ahead with the construction of the plant and faced many odds and ends. The inauguration of the plant was postponed, as many as five times. Finally it is proposed to privatise this project, which has a staff strength of 1200, due to the losses incurred by the management.

The above factory amply demonstrates the power of Vaasthu and also proves, that any effort to go against the natural order, would be disastrous. As the topographical deficiencies cannot be set right by human endeavour, the factory had to run in losses, the employees had to work under constant threat of closure or retrenchment. Ultimately the Govt. of A.P. has come out with a package, to privatise Allwyn. The present plight of Allwyn was prognosticated and published in the first edition of the Telugu book "Vaasthu Sashtva Vaasthavalu" in 1987 itself.

"GREENLANDS" IN HYDERABAD

"Green lands" is a palatial building, located in Begumpet on the way to Hyderabad air port. This is a State owned property, and used to be the official residence of the Chief Minister of Andhra Pradesh, once upon a time. The power of Vaasthu on this building is such, that all the seven chief ministers who stayed here, had to step out of power, before expiry of their respective term of office. Following are the negative features of the above building as per the Science of Vaasthu, just like a man who is blind, deaf, dumb and is lame, too.

Elevated land in west – Turns up household into golden chest.

- (i) There is an extension in northern northwest of the compound and it is covered completely. The phenomenon results in fire accidents, robberies, apart from causing change of place to the inhabitants. It also casts evil effect on the female inhabitants.
- (ii) Northern northeast is diminished, besides it is not straight but have debilitated change, and above all it is covered. Closure of northeast is a serious negative feature.
- (iii) There are heaps of stones in the northeastern corner of the compound, while a low lying area exists in southwest.
- (iv) The southeast portion outside the compound wall is depressed, and an entrance is arranged in eastern south-east. Above feature results in fire accidents and robberies, besides causing financial troubles.
- (v) The southern southwest is extended, which makes the female members seriously ill, or lose their character, or meet premature accidental death.
- (vi) There is an entrance in western southwest of the compound wall, which lays negative impact on the male members of the family. Door in western southwest - More damaging for the life of host.
- (vii) There is a depression in south and elevation in north, which are serious defects as far as the financial soundness is concerned. Elevated land in north - A root cause of dismal dearth.

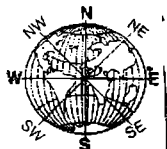

A perusal of the history of "Green Lands" reveals the following :

Northwest more elevated than southeast ~ Suppresses down the household to the lower crest.

- (i) During the stay of Mr. Girson, a Revenue Member in Nizam's Government, and the first resident of this building it was attacked and set on fire by the supporters of Ittehad-Ul-Muslamans, on the pretext, that disgrace was caused to Mohammadans.
- (ii) When the popular government took charge of the state, the building became the residence of the Chief Minister Shri. Burgula Ramakrishna Rao. But he vacated the same, subsequent to the occurrence of mishap to his daughter, and resided in Shahi Manzil, the Raj Bhavan.
- (iii) When Hyderabad became the State Capital of Andhra Pradesh, Chief Minister Shri Neelam Sanjeeva Reddy, made this building his official residence. However he had to vacate this building, after the occurrence of a fire accident, due to short circuit, during his daughter's marriage. He met an accident in bathroom, too.
- (iv) Shri. Damodaram Sanjeevayya, who succeeded Shri N. Sanjeeva Reddy, stayed in this building, but had to quit office, before the expiry of his tenure.
- (v) Shri. Neelam Sanjeeva Reddy, who succeeded Shri Sanjeevayya once again, made this building his official residence, but he had to tender resignation to his office, before the expiry of his tenure.
- (vi) Shri Jalagam Vengala Rao entered Green Lands, as the next Chief Minister, after effecting certain modifications.

Land elevated in southeast, northwest, and northeast more than southwest – Down fall of the host to lose his might.

But he vacated the same and moved into his own residence during his term.

- (vii) Dr. M. Chenna Reddy, too, stayed in this building, as the chief minister for some time. He effected lot of alterations to this building, though not strictly, as per Vaasthu. He ultimately moved into his own house in Tarnaka.
- (viii) Finally Shri T. Anjaiah made 'Green Lands' as his official residence, and lost his office before the expiry of his term, after being ridiculed by one and all.

Above description amply proves that no body is above the influence of Vaasthu.

NIRMAL HRIDAY BHAVAN FOUNDED BY MOTHER THERESA IN CALCUTTA

Our team had visited Calcutta in May, 1989 and examined the power of Vaasthu on the great hospital "Nirmal Hriday Bhavan" founded by Bharata Ratna and Nobel Laureate Mother Theresa.

- (i) Situated in western northwest of temple Goddess Kali, the building has roads on all the four directions, which is a very good feature as per Vaasthu.
- (ii) The building does not make angles, in any of the four directions, and this feature is responsible for the peerless glory of Mother Theresa.
- (iii) The main entrance is located in northwest and, there are

Elevated land in north - A root cause of dismal dearth.

pials in all the directions of the building. This is responsible for drawing numerous patients and curing them of their diseases.

Mother Theresa founded another charitable institute "Sisu Bhavan" on the circular road in Calcutta, which also enjoys positive effect of Vaasthu, due to the following features:

- (i) It has a road to its east.
- (ii) The building faces east.
- (iii) A high structure is located to the south of Sisu Bhavan
- (iv) The compound has gates in eastern as well as northern northeast.
- (v) Both the north-easters are extended.
- (vi) The west is an elevated portion.

In view of the above, this building continues as an ideal abode of orphans, providing them food, clothing and shelter under the direct supervision of the great, generous Mother of humanity.

GANDHI SEVASHRAM AT WAARDHA

The father of our Nation, Mahatma Gandhi founded this Ashram, during the pre-independence era, to serve as a venue to train and prepare the youth, to fight against the mighty British empire, with the weapons of non-violence and satyagraha. This Ashram, which played a vital role in India's struggle for independence, with full vigour and vibration, remains today as

Land elevated in northeast – Saps off riches to the least.

a silent and solemn monument. Our study has revealed, that its loss of prominence and grandeur is, due to the additions and alterations effected to the Ashram structure over a period. Following are the positive and negative features of Vaasthu, which are responsible for the rise and fall of the glory of the Ashram.

Gandhiji's habitat "Adi Nivas" is located in southwest of the Ashram premises. It has walking space around it with a hall in the middle, apart from a toilet in southeast and a store room in southwest. The road situated to the west of the Ashram has increased southwest. The gate is in western southwest.

To the southwest of "Adi Nivas" a complex called "Khadi Gramodyog Bhandar" is constructed, with an extension southwest. To the western southwest of the Bhandar, the hostel of the volunteers is located. The kitchen of the Ashram is located in the extended portion of southern southwest. A well is located to the southeast of the kitchen and to the southwest of the entire Ashram.

An over head tank is located to the east of the well. A cattle shed is located in the extended portion of southern southeast and to the southwest of the kitchen. Servant quarters are located in the extended portion of the cattle shed in southern southeast. Vast agricultural land is located to the southwest, southern southeast and south of the cattle shed. Another well is located in the southwest corner of the field with a wind mill attached to it.

To the northeast of "Adi Nivas" the "Kasturiba Kuti" is built

Flow of rain and sewage water towards northeast – Welcomes blessings from all around very fast.

by Shri. Jamnalal Bajaj, with main entrance facing west, and a subsidiary entrance facing north. It does not possess any entrance in east. It has a toilet in northeast and a bed room with a door in south but not in east. "Akhiri Nivas" and "Bapu Kuti" are located to the northeast of Kasturiba Kuti. Another servant quarter is located to the northeast of Bapu Kuti and to the northwest of Akhiri Nivas.

Akhiri Nivas has to its northeast, a toilet inside and "Parchure Kuti" outside in the same direction. The cottages belonging to "Naeetalim Parisar" are located to the north of "Akhiri Kutir". in northwest and north. All these structures are bigger, heavier and higher than "Adi Nivas" of Bapuji, located to their south. Agricultural lands are located in east and Northeast. Hefty trees are grown in east, north and northeast, which is prohibited in Vaasthu.

Thus the entire Ashram is filled with cottages built against the principles of Vaasthu ultimately rendering this famous Ashram into a mere historical monument. Let us hope that some one will revive its peerless past grandeur.

VAASTHU POWER BEHIND THE AESTHETIC ATTRACTION OF TAJMAHAL

Taj Mahal is one of the greatest architectural monuments of the world. It is a legend in marble, dedicated to a beloved, by an ideal spouse. Behind its captivating beauty and unabated attraction, lies the following positive features of Vaasthu.

Flow of water from northeast – Causes prosperity of the host.

This structure is built as a perfect square. Symmetries are built on all the four sides. The entrance in south is high whereas the entrance in north is low. The entrance in east and west are similar in size. The river Jamuna is in the north, flowing towards east. All the structures in the arena are symmetrical. Above all, the entire structure is perfectly set to the compass.

CAFE OF KERALA AT BENARAS

" Fortune knocks at least once at every door " and " From frying pan into the fire, " is said in general. It is not All Luck, but the Vaasthu, which favoured at any particular place.

When all the hopes are gone into oblivion some people will try their luck in a far off place, where it generally favours them. On keen observation, it is found, that it is the favourable aspect of Vaasthu, ie. his residence, there.

In Benaras, at Belpura there's a hotel, facing east, projecting in northeast on the eastern road; overpowering it. The southwest room of the house is elevated high and the kitchen is provided in it. The overall speciality is that the northeast of the shopping complex on its east is cut. That is why the catering is going on in " 3 cheers and 6 hopes "

Towards east let the water flow – With fortunes, let the household glow.

SARASWATI MAHAL AT TANJORE

"Saraswati Mahal" at Tanjore is one of the greatest repositories of oriental scriptures, besides being a museum. Thousands of tourists throng this campus everyday, and its income runs in thousands of rupees a day against the saying that Lakshmi, goddess of wealth, never abides with Saraswati, goddess of learning. The power of Vaasthu of this building, lies in the depressed northeast and northeast-ward movement.

HOTEL VISHAL OF BENARAS

Hotel Vishal, hotel with all facilities but running losses, situated in a busy area in Benaras, is in Fuldahi Yakran and Pishachi Vimochan area.

It is built in east; a guest house in northwest and another house, on its compound wall. There's the street focus in northern northwest. A garage exists in low level in south ; and open space in south west . Servant apartments are in total north and a hall in south. The southeast of the eastern wall is covered by servant - shed . At the western end, there exists a vast open field.

The huge complex with 45 rooms and a hundred beds, was completed in 15 years; but the huge structure, because of the above Vaasthu defects, did not yield profits, but dismay, to the entrepreneurs.

Flow of water towards south – Blows out female health.

FACTORS LEADING TO THE FALL OF HAMPI AS PER VAASTHU

"Hampi" in Kamataka was the capital city of Vijayanagar Empire. Historians speak very high of its glory and grandeur during the regime of Krishna Deva Raya. The experts of Vaasthu attribute the fall of mighty Vijayanagar empire to the architectural defects of the buildings of Hampi from the view point of Vaasthu, though it is attributed to the seige of Turks by historians.

A thorough examination of the entire city by our team has revealed the following negative features as per Vaasthu:

"Lotus Mahal" the venue of rest and recuperation of the queen Chinnadevi, has to its north, an incoming compound wall, which reduced the northeast in a graded manner. A hillock is located to the north of Lotus Mahal making south and southeast low. A well is located in the southeast of Lotus Mahal. An out post of the security guard is located in the form of a high structure to the east of Lotus Mahal. The royal kitchen is located in a depressed portion in southwest. A hillock in the total arena is located to the northeast of Lotus Mahal.

All these features made the lives of Vijayanagar Queens miserable, on account of wars and attacks by enemies.

The Hazara Rama Temple has a well to its west. The northeast of the temple complex is covered by "Yagna Sala" (Holy fire place), southeast by a performance podium, north-west by an army barrack. All these structures have closed the prospects of

*Flow of water from southern southwest – Throws out health of females,
no doubt.*

prosperity of the temple.

The royal court "Bhuvana Vijayam" has to its north hillocks that had contributed to the downfall of the empire and fading away of its ever - blith grandeur.

The podium of "Sapta Swara" a mould of seven tones of music, out of a single rock, a musical legend of the royal city, has an entrance in south. The entrance, to the tower, located towards north is put in northern northwest instead of in line with the south door. To the northeast of music podium another podium is built at an altitude of five feet. Apart from the above hillocks in northeast and function podium in southeast have sapped the glory of the imperial city, Hampi.

ARCHITECTURAL GRANDEUR OF BELUR AND HALEBID IN KARNATAKA

The sculptures of Belur and Halebid in Karnataka, stand as testimony to the architectural acumen of our medieval Indian sculptors. In spite of their power to attract and captivate the onlookers, the sculptures of Belur and Halebid suffer from loss of patronage, because of the defects of Vaasthu.

The major defect of the structures is, that they are built as multidimensional structures, which is a negative feature as per Vaasthu.

Construction of a structure in the shape of a star, is supposed to be a serious draw back, as per Vaasthu, because the structure fails to get advantage of any direction. The person,

Rain and sewage water flow through western southwest – Knocks down the health of the host.

who has built a similar star type temple to Sai Baba, in Kurnool, has met disastrous consequences, is well known.

PREMIER STUDIO IN MYSORE

Premier Studio in Mysore shot into prominence after the occurrence of a fire accident, in which nearly 50 people 29 on the spot, and 21 in the hospital, died on 9th February, 1989, when the Tele serial "Tippu Sultan" was being shot. A visit by our team to Premier studio revealed the following negative features as per Vaasthu. The road located to the south of the studio has extended the southern southeast. The southern southwest is depressed and less elevated. A vast agricultural field is located to the west of the studio.

Proverb :Gradient towards southwest - Head under serpent's crest.

The studio has a powerful street thrust in southern southwest. The compound wall in west has increased western southwest. To the southern southwest of the studio, are located, a stall; a police station and a canteen; all possessing entrance in southern southwest, of the studio.

Proverb:Southern southwest street thrust - Hits at the health and wealth of female most.

The studio offices also have an entrance in southern southwest. Northeastern part, inside the compound is more elevated than southwest, northwest, southeast, west and south.

Flow of water towards southwest - Proves to be the deadliest.

Proverb: Southern southeast gate-Venomous serpent's bite.

Land elevated in northeast-Saps off riches to the least.

Northwest is diminished due to the erection of a barbed wire in a curved shape on the northern side. The compound is built in such a way that it increased eastern northeast for the whole site and southern southeast in south . One fourth of compound wall is built by increasing western southwest in the west and remaining is left open.

Proverb: Western southwest extension-Host's life line contraction.

The main gate of the studio located in eastern southeast, has street thrust in southeast and eastern southeast.

Proverb: Street thrust in eastern southeast-Beats at the sources of wealth and rest.

Proverb: Gate in eastern southeast-A spear in the chest.

Albeit the existence of sane street focuses in east and northeast, could not nullify the above serious draw backs. Similar structures i.e. residences, factories, studios, cinema halls, can be seen in a great number. The mal - effects can be found at the beginning, or after some time or a long after. They can be averted with the help of the learned Vaasthu scholars.

COMMERCIAL STREET IN BANGLORE

Billions exchange in the ever busy commercial street in Bangalore, making the saying " Gold on the Road ", true.

Flowing of rain and sewage water towards west – Pumps down the health of the host.

The Commercial street is extended east and west ward, sloping down from west to east. The Kamraj road is lying in the east as its boundary, extending towards north and south, sloping towards north. There are cross roads on either sides of it. First Mariamma Koel Cross road is sloped towards north. The second Laxmana Modaliyar road too is sloped towards the north of Commercial street. The third Narayana Pillay street is on both sides of Commercial Street is going down towards north. Fourth one is Jewellers street. It is also sloped towards north. The same about the fifth, Labby Masjid Street.

Jumma Masjid road is in its western end. Sri Venugopala Swamy road is quite in front of Commercial Street road. Thus all the roads glorified the Commercial Street to its Zenith.

The small shops in Jumma Masjid road have no such glare, as it is extended in southwest. The houses on northern side of this street had no bad effect, as the other things are so favourable and blessing.

The above roads are sloped naturally, confirming and proving the science of Vaasthu powerful once for all.

GLASS HOUSE IN BANGLORE

Glass house in Banglore is a venue for political congregations and party meetings. The peculiarity of Glass House is that, it proved to be a Loss House for many statesmen and politicians. Most of the resolutions that were passed here became ineffective and were not implemented.

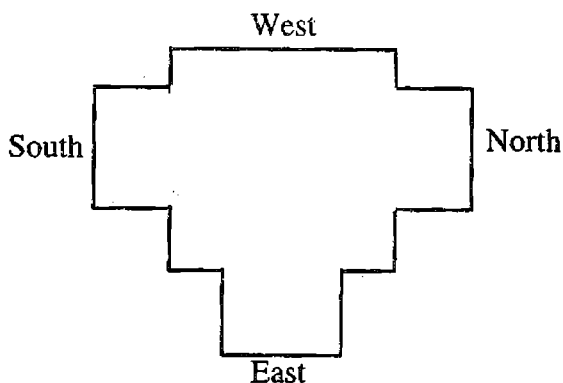

Flow of water towards north in a house – Contributes to the health of female spouse.

The Kannada daily "*Prajawani*" reports about the history of Glass House in the following manner.

Glass House was the venue for Karnataka Congress party's meeting under the leadership of Sri Nijalingappa, when the party witnessed a split for the first time. The same venue was chosen by Sri Devraj Urs for strengthening the party. But his attempt did not fructify and he had to pass into oblivion. Glass House laid its impact on Sri Gundu Rao's political career, as he too committed the mistake of making it, as a venue for his party meetings and history repeated once again in the case of Sri A.K. Subbaiah too, the same happening.

Glass House did not allow realisation of the dreams of the king of Kannada Kranthiranga Sri Bangarappa, as his tenure as a C.M. was a shortlived one. Sri S.R. Bommai too repeated the mistake of fixing Glass House, as the venue for his party meet and faced the vice consequences.

Flow of water towards northern northeast – Makes the female spouse enjoy the health to the best.

A study of this structure Glass House which is in the form of cross, reveals the following : from the view point of Vaasthu.

It has passages from southern southwest and northern northwest, which are low cast in character. Above passages are in the nature of arches. Three of them are located in west; one in southern southwest, one located in extended northern northwest, and another one, facing east.

It has to its east, an elevated surface of four feet height. Gradually increasing upto fifteen feet, besides extending towards northeast, there is a hillock. It has, to its west, a low lying surface within a distance of hundred feet which extends upto 1320 feet, towards west. It is elevated high in the east extended upto 3300 feet.

The land surface towards the south of Glass House stretches over 3960 feet, and is less elevated than the eastern part and more elevated than the western patch. Moreover Glass House has street focus in southern southwest and northern northwest. It's elevated yard in east is in a semi circular shape where as the yard in west is a plain terrain. It has to its southwest a tank called "Lalbagh " and it is the water source for Glass House.

Proverb : Southwest tank - Is a path full of spike.

The entry points into the Lalbagh garden are, Cameron gate in northern northwest, Crumbegal gate in western southwest, Siddavur gate in south and New gate in northern northeast.

Of the above gates, the last one, located in northern

Drainage pipe in east - Peace and prosperity to the host.

northeast, at the confluence of northern and eastern roads, is only an auspicious one, while the others are inauspicious. Lalbagh has extended surface in south, west and southwest. It has a diminution in northeast, besides having an extension in northern northwest, and another diminution in eastern southeast.

As a result of the above mentioned negative features, and on account of the baneful influence of Lalbagh, the structure, Glass House, witnesses huge inflow and outflow of public, and its main characteristic feature is "instability".

That being the case, there is no wonder, if the decisions taken at Glass House, never witnessed implementation.

THE GLORY OF A COUNTRY AND VAASTHU

The Vaasthu of our India is not in form, because of the great Himalayas in the north and the Indian Ocean in the South. Hence Indians must consider Vaasthu for their habitats.

Every structure, constructed on earth, be it a small hut, or a house or a mansion or multi storied apartments; offices, factories or business establishments; must be in accordance with the principles of Vaasthu.

How Vaasthu go in a long way to build any nation or country great, can be proved with the example of Israel, the birth place of Jesus Christ.

It is a land of 8000 sq. miles, with population of one crore.

Drainage pipe in eastern south east – Proves baneful to the children most.

The neighbouring Muslim countries, well off with petro dollars tried many a time to crush down Jews. Inspite of many wars the Muslim countries could not wipe off this small nation ; and laid down their arms before the Jews.

Why such a small nation is so invincible ? It is because of their topographical and geophysical nature of the country.

In the south of Israel there's a Vast desert ; water resources in the north , and in the east the Dead Sea. These blissful features made Israel a titan and glorious nation in the world.

JAPAN'S INDUSTRIAL POWER PROPELLED BY VAASTHU

Japan is a tiny Nation comprising a group of islands. But it is a titan in the sphere of industry trade and commerce. Following positive features of Vaasthu contribute heavily for its prosperity.

Pacific Ocean is located to the east of Japan and covers north also to some extent, making the two sides topographically low. To its south it has some islands, apart from Australia. Japan is the English name for Nippon, means "The Rising Sun", in Japanese language.

Above features have transformed the tiny island into a titan industrial giant. However Japan has some negative features of Vaasthu, like water in west and southeast, which cause calamities quite often.

Drainage pipe towards south – Severs peace and pace from house forthwith.

SWITZERLAND, THE HEAVEN ON EARTH

Adam and Eve were sent out of the Eden Garden and thrown out on Earth. Had they been dropped in Switzerland, they wouldn't have been repented for their act of indiscipline against God, since it is the Heaven on Earth: the Natural Bounty. Its the most beautiful country in Europe. This country par-excelled many a country in natural beauty, resources as well as wealth; of course people are blessed with good health, too.

Switzerland is a modern country of ultra modern facilities to live in peace and comfort. It is the only democratic country which has not entered any of the world political groups, such as NATO, CETO etc; though it is a member of the United Nations Organization. It has many specialities of its own in politics, economics, trades, and nationality. The people of Switzerland speak German, Italian and French, but they are one as Nation. Bern is its capital, while Geneva, is the seat of UNO Court of Law. Its population, as per the census of 1991, is 65,52,000 in an area of 41293 sq km..

Its agricultural produces are: Fruits, potatoes, wheat, sugarcane, beet root and dairy milk productions. The industries produce chemicals, medicines, electrical sparesparts, machinary, tools, cloth, food packages and watches.

Compared with other countries of the world Switzerland is lacking natural resources, but still it is the wealthiest country in the world. The wealthiest people of the world have their accounts in

Drainage pipe in southern southwest of house – Deteriorates the health of female spouse.

the World-Bank of Swiss Banks. This is because of its Natural Phenomenon : Vaasthu.

Switzerland is situated between two mountain ranges. The Jura mountains are spread from western northwest to south west; while the Alps are in the south all along; making a “<” figure or V; the symbol of Victory. The mountain ranges are high in south, west, and western north west. The Rhine river, starting in the Alps flows towards the North Sea, there by making the land sloped towards north. Thus the land of Switzerland is sloped down from south to north, making the land high in south and low in northern northeast, eastern northeast and northeast, in the shape of “<” .Thus the lands in east became low and fertile, endowed with plenty and prosperity; the beneficent blessing of Vaasthu. The plateau in western northwest and northwest adds to the strategy, stead-fastness and self-reliance of the Nation. To prove its superiority the Haultem International, Switzerland has manufactured a watch “Radiant 2000”, worth of Rs. 20 Crores of 173 jewels weighing 150 carots each.

Since it is the land of mountains, there are many valleys and the crystal clear water resources, lakes are formed. Many big cities flourished around these lakes, owing to the natural Vaasthu potency i.e., lands naturally gradient from west to east and / or from south to north. This is the most auspicious phenomenon for the cities to flourish in finances and trades; imports and exports. The money is flowing into this country from many countries of the world, making it unparallel in the riches. The industries, though they are small, are well established with sound finances and

Drainage pipe in western southwest – Baneful to the welfare of the host.

 running their business in millions !

The beneficent Vaasthu, naturally accomplished, is mainly responsible for the development and flourishing of Switzerland the land of natural beauty; the Heaven on Earth.

KUWAIT'S CAPTURE BY SADDAM HUSSAIN

If the attempt of Saddam Hussain to capture Kuwait, is analysed, from the view point of Vaasthu, we can undoubtedly conclude, that his attempt would never fructify, due to the following features.

Kuwait is located to the southeast of Baghdad. Such south eastern movement is likely to result as a futile exercise.

Here the example of "Dakshina Gograhana" of Mahabharat suits appropriately, where in Kauravas faced a defeat, in their attempt to capture the live stock, (Cattle) belonging to the King Virata, by marching towards Southeast. One more example.

Drain pipe towards west – A snake which saps all the best.

Famous Telugu cine actress Savitri has doomed to death, when she acquired the house in the south.

THE LAND OF POWER BRAND ENGLAND

Where as the world has evinced the rise and fall of many imperial powers or dynasties, in mediaeval and modern era England has enjoyed the power of rule on Three fourth of the globe and dwindled along the time, loosing the regimes due to the struggle for independence through out the sub-dued nations.

Through the historian attribute the rise and fall of British power all over the world to political awareness and politics of war and love, the Elementary reason is of Elements i.e. Sun, Air, Water, Earth and Sky, the Vaasthu or the geophysical effects of Nature and its inconsistent powers.

The English people or the British, the decendents of Anglo-Saxan, people, are known as the first and fast to establish foreign empires with one or the other pretext of entry to it, for example, East India Company has stepped upon Indian Continent to sell their merchandise.

When a thorough investigation is made into the facts of history, it will clear up the reason, the Vaasthu and its Effects.

The northeast of England has increased as Northemberland, while the northwest is cut off with Damarees and Galone' of Scotland. This is the first phenomenon of Vaasthu, which is responsible for the superiority and prosperity of the nation. The

Drain pipe in northen northwest of a habitation – A perennial source of long litigation.

North Sea is spread thro'out east and extended upto English Channel in south with Dover Gulf. Its a general good symptom. The countries of Norfolk and Suffolk have increased like a hunch in eastern southeast, leading to fall of power and mutual enmity.

The English Channel in south is not auguring well, and resulting in loss of power or regime. But it has been nullified with elevated continent in southwest, causing stabilisation of strategy and imperialism. The Wales in west is establishing durability.

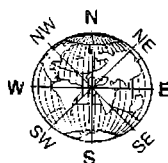

The contraction of land in northwest in western northwest is sparing well even though the Irish Sea in western northwest is causing enmity. All the rivers in this land originate in west and flow towards east. This is the natural blissful phenomenon endowing with highly developed knowledge in all spheres of culture, development and civilisation, leading many nations.

Though there exist a few defects of Vaasthu, there are many affections, leading England as the foremost nation in the world with great technical know-how, industrial and scientific discoveries and inventions, mainly because of the extension of northeast.

FATAL IMPACT ON THE STATUE OF KARUNA NIDHI

The bronze statue of Karuna Nidhi, ex-chief minister of Madras, was completely demolished, when it became the target of hooligans at the demise of Late M. G. Ramchandran, the then Chief minister of Madras; because the statue, in Mount Road and Genl. Peter's road, having Nubelal and Bakery in north and Wellington theatre in south, is being faced by unfavourable street focus from south west, horribly.

*Drain pipe in eastern northeast – Ushers health and wealth to males
foremost.*

SUPER IMPACT ON SUPER BAZAR

Time and again the cautions given to rectify the Vastu defects, had not heeded upon and the result was the destruction and looting of over Rs 60 lacks of things by the agitators in 1988 December from Super Bazar in Vijayawada; and closure of it, next.

The malafides of Vastu to Super Bazar are : -

- a) The compound of it is extended in northern northwest, abducting northeast and projected in southern south east dethroning the owner and devastating him.
- b) The open space in south is more than in the north, existance of compound in north, and lacking in southern southwest, resuted in financial loss and insolvency.
- c) There is a water canal in south, which made the owner sick and his spouse ill, besides selling out the house.
- d) Owing to the extention of south west, there was prolong ill health, financial difficulties, sudden accidents, defamity and charachterlessness of men and women.
- e) The entrance in north is high, as the stairs are in south to godown. This results in loss of health and mental peace and loosing the house to others.
- f) It is built on eastern border and had a godown in that side a higher construction. This makes the owner suffer disasters horribly.

Western wall higher than that of east - Happier the inmates with riches aloft.

Hence the recklessness about Vaasthu, ruined the owner. But, due to the ratification made as per our advice, it is reaping lucrative profits, now for them.

MOTHER OF FIVE BLIND CHILDREN POWER OF VAASTHU

A news item in a Telugu Daily 'Udayam' dated 5th October 1991 titled "Mother of five blind children", compelled our team to visit the house, located near clock tower at Mahaboobnagar, in Andhra Pradesh. Our study of that house from the view point of Vaasthu revealed the following negative features, which has resulted in the blindness of five successive issues of the same mother.

- (i) Main entrance of the house is located in west. The compound wall from southern southwest to south and the wall from northern northwest to north have been extended against Vastu.
- (ii) The Southern wall of the house has extended Southern-southwest by 13 feet.

Proverb : *Extension of southern southwest-Deludes joys of female and drugs unrest.*

- (iii) The vacant yard in west has extended four feet towards southwest, eight feet towards northwest, apart from increasing western northwest.

Drainage pipe in the north – Brings home the benign growth.

Proverb : Leave not west uncovered-Expose not betterment unguarded.

- (iv) The east is covered by extending the terrace till the eastern boundary.

Proverb : Closure in the east - Endangers males most.

- (v) Northeast of the house is diminuted.

Proverb : Debelitate not northeast—Decelerate not lineage in future next.

- (vi) Flooring level of the house is more elevated in east by one feet six inches than west.

Proverb : Land elevation in east - Fated to health and wealth as curst.

- (vii) Kitchen is located in southwest making the person face south, while cooking.

Proverb : Facing towards south while cooking - Brings financial troubles and suffering

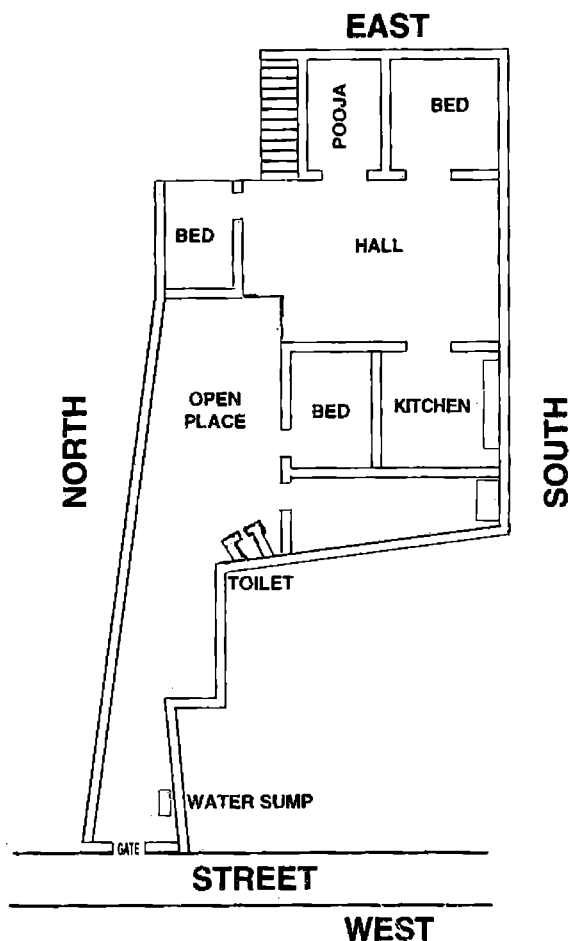

- (viii) The water tank is located in northwest.

Proverb : Water tank in northwest—Leads to perennial litigation.

- (ix) Stair case is in northeast, proceeding up towards east.

Proverb : Elevated northeast — Saps off riches to the least.

Drainage pipe in northern northeast - Ensures proper placement of wealth at crest.

***Layout of the Desolute House
that caused Blindness to Five children***

Eastern wall higher than that of west – Unhealthy to the residents almost.

- (x) Construction of a bedroom in northeast resulted in closure of northeast.

Proverb : *Sleeping in northeastern room - Inviting deadly diseases and doom.*

- (xi) Another bed room has an entrance in Northern North-west.

Proverb : *A door in northern northwest — Makes all things inconsistent.*

- (xii) Diminution of northeast in two sides in construction can also be noticed.

Proverb : *Debelitate not north east - Decelerate not the lineage in future next.*

- (xiii) Construction of stair case in northeast made the southeast, go down.

Proverb : *Southeast more gradient than north west - Nowhere the hopes are high, loss at rest.*

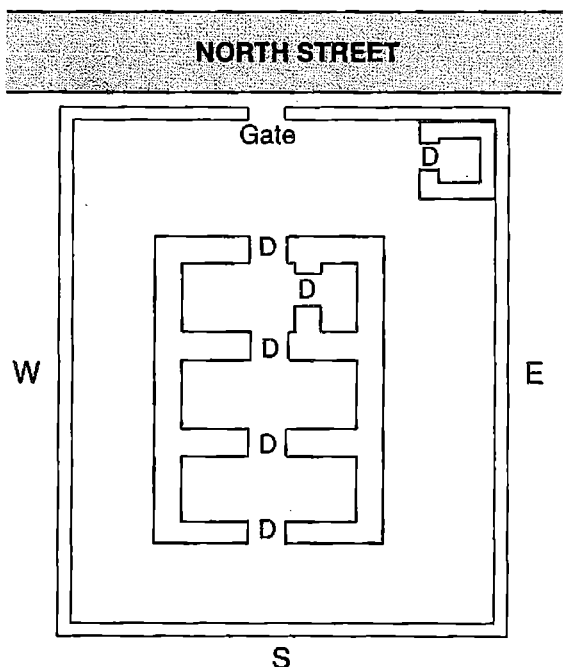

All the above defects made all the five children of the house to lost their vision. The new owner of the house is being suffocated, with many troubles. Modifications to the house as per Vaasthu, had been duly suggested to the inhabitants to avoid further damage.

Higher northern wall than that of south – The finances of house are at dearth.

CLOSURE OF NORTHEAST

Northeast is an intermediate direction formed at the confluence of north and east. The Science of Vaasthu says, that northeast should be kept open clean and lighter, as far as possible. Construction of a bathroom, toilet, cattleshed or any other structure raised on northern and eastern boundaries leads to closure of northeast. However existence of adjacent structures in east, south and west of a house, and possessing some vacant space and a road in northern lateral side, does not lead to the closure of northeast. Similarly the existence of adjacent structures in south, west and north, of a house, and possessing some vacant space and a road in eastern lateral side, does not lead to the closure of northeast.

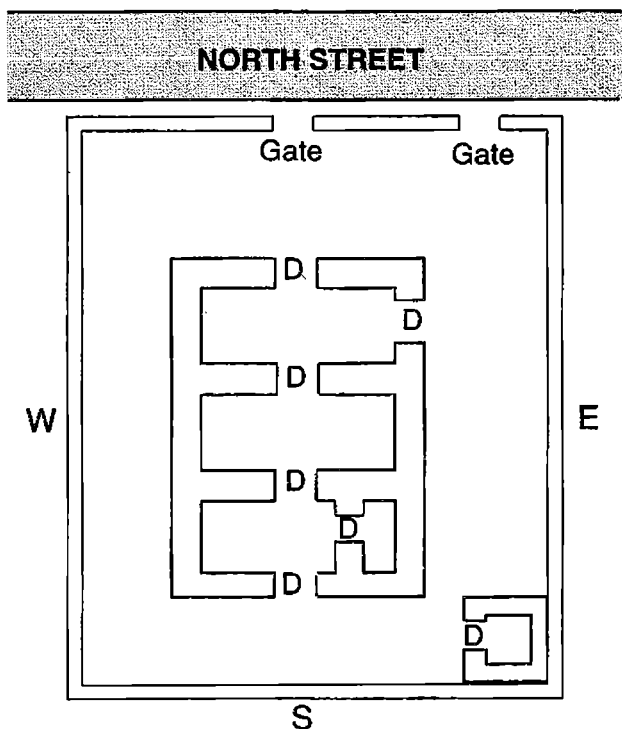

Southern wall higher than that of north – Ushers the chances for amazing wealth.

CLOSURE OF SOUTHEAST

Southeast is an intermediate direction formed at the confluence of south and east. Construction of any structure, on compound walls in eastern and southern southeast, leads to closure of southeast so it is forbidden. However the existence of adjacent structures in east, south and west, of a house, and possessing some vacant space and a road in northern lateral side, does not lead to closure of southeast.

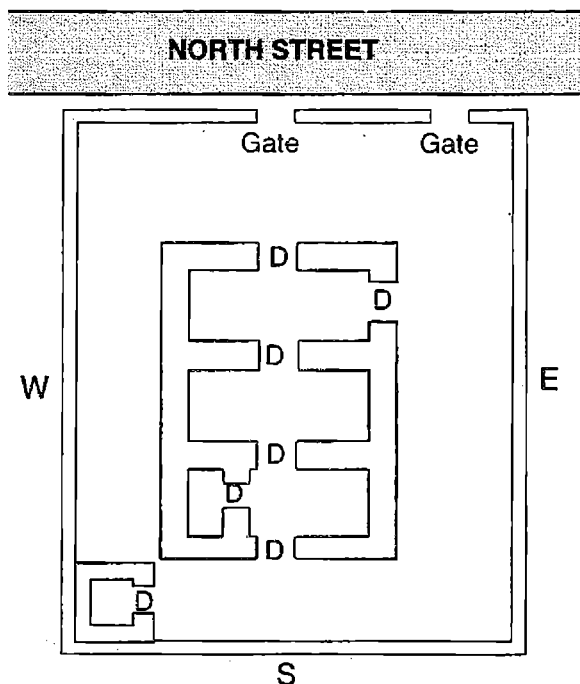

Awry eastern wall – Worries the male in all.

CLOSURE OF SOUTHWEST

Southwest is an intermediate direction formed at the confluence of south and west. The science of Vaasthu says, that southwest must be set to the setsquare, and the house can be constructed without leaving any place vacant in southwest. The science of Vaasthu suggests, that if sufficient space is available in southwestern corner, an outhouse should be constructed as it acts as a perennial benefactor. This is called closure of southwest. However the outhouse proves effective, only when there are no wells or pits in the neighbouring plots to the south or west of that out house. It can be constructed 2 or 3 feet away from the compound wall.

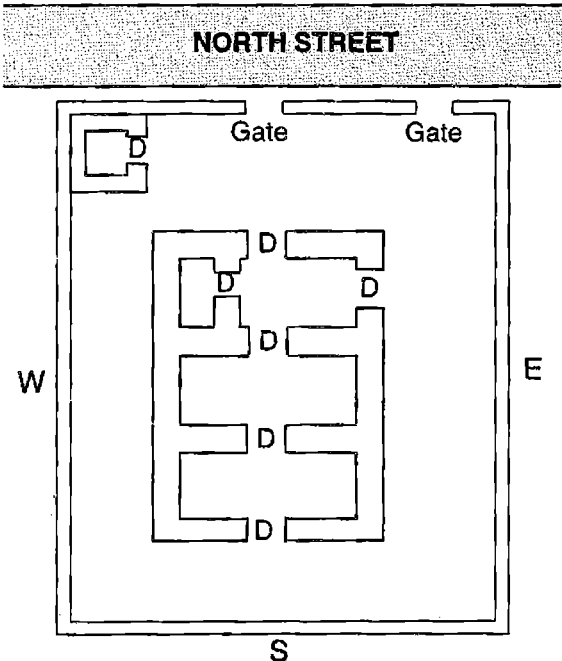

Awry southern wall – Makes the female health fall.

CLOSURE OF NORTHWEST

Northwest is an intermediate direction formed at the confluence of north and west. The science of Vaasthu says that closure of northwest that is construction of any kind on the compound wall with roof, in this corner, causes unwarranted mental tension. Hence adjuncts or substructures should not be built in northwest. However existence of adjacent structures in south, west and north, and possessing some vacant space, and a road in eastern lateral side does not lead to the closure of northwest. Similarly existence of adjacent structures in east, south and west, and possessing some vacant space and a road in northern lateral side, does not lead to closure of northwest.

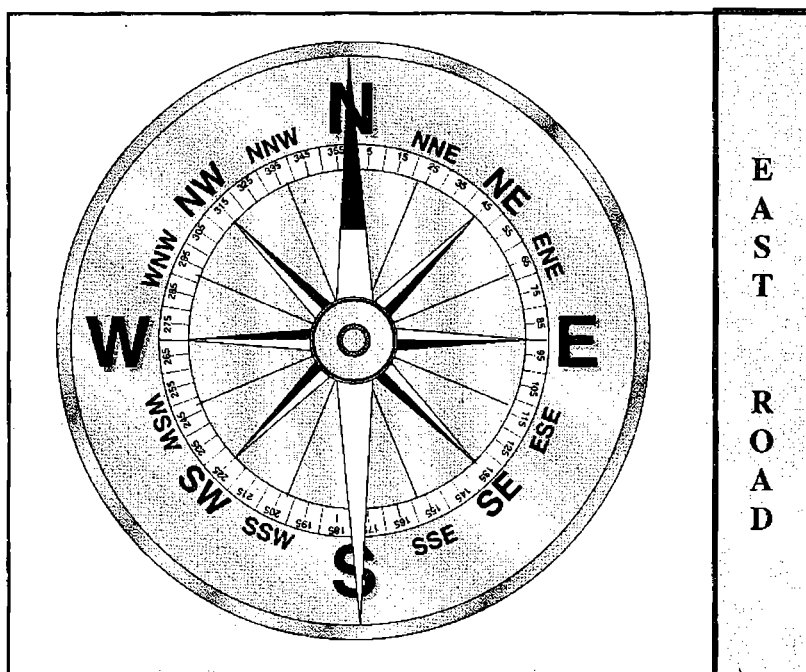

Awry western wall – Affects happiness of one and all.

USE OF MAGNETIC COMPASS IN VAASTHU

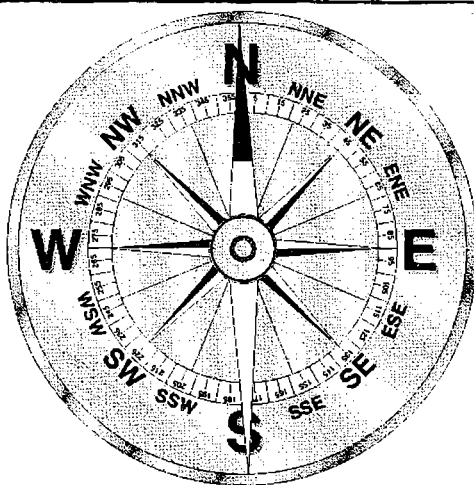

Magnetic compass is the most essential gadget in determining the direction and suitability of a site as per Vaasthu. Following instances may be studied carefully to appreciate the application of magnetic compass in Vaasthu.

PERFECT SITE

This is a perfect site as per Vaasthu. In the normal circumstances, a house facing east, should be constructed in the above site. However the house may also face north, depending on the neighbouring houses. If another street exists to the west of the site, the house may be built facing west. But in no case the house in the above plot should face south.

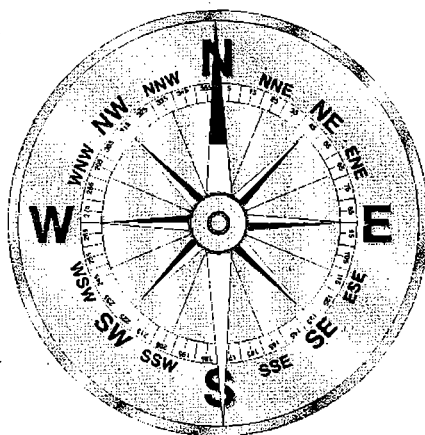

Awry northern wall – Drenches finances and dreads females as well.

This is a perfect site as per Vaasthu. In the normal circumstances a house facing south must be built in the site. However depending on neighbouring houses the house may also face east, and it may even face north, if another road exists in north. But in no case the house in the plot should face west.

SOUTH ROAD

D

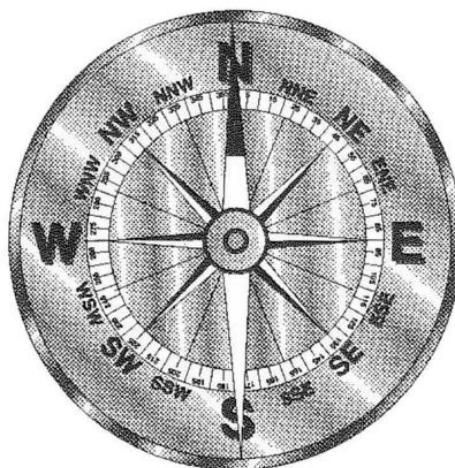

This is a perfect site as per Vaasthu. In the normal circumstances a house facing west should be constructed in the above plot. Depending on the neighbouring houses, it may face north also, and if a road exists in east, the house may be constructed facing east. In no case the house should face south.

Eastern gate – Ensures regular feast.

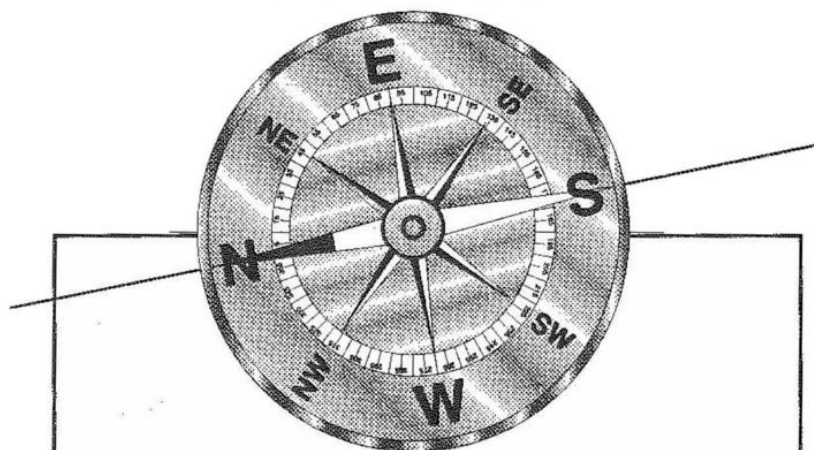

NORTH ROAD

This is a perfect site as per Vaasthu. In the normal circumstances a house facing north should be built here. But depending on the neighbouring houses, it may also face east, and if another road exists in south, the house may be constructed facing south. In no case the house in the plot should face west.

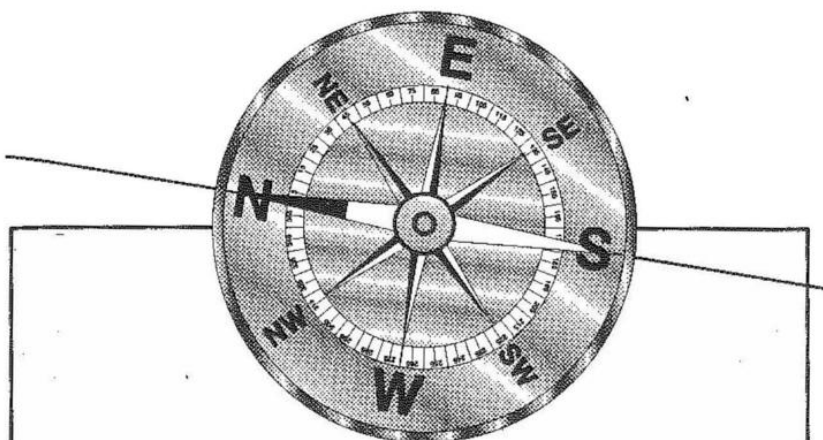

INCLINATIONS

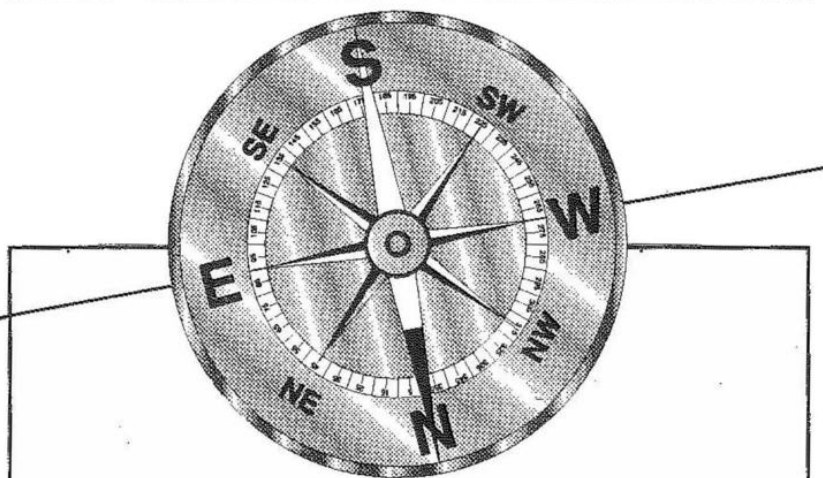

Above site is (extended) inclined towards eastern northeast by ten degrees.

Street thrust in eastern southeast – Beats at the sources of wealth and rest.

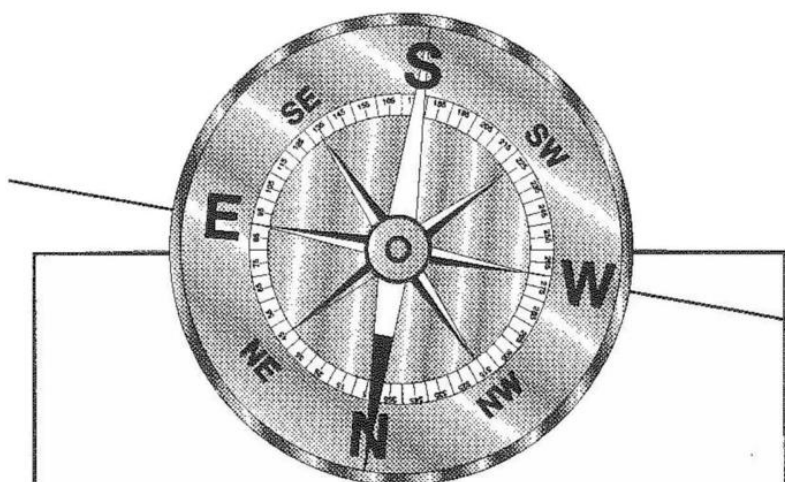

Above site is (extended) inclined towards eastern southeast by ten degrees.

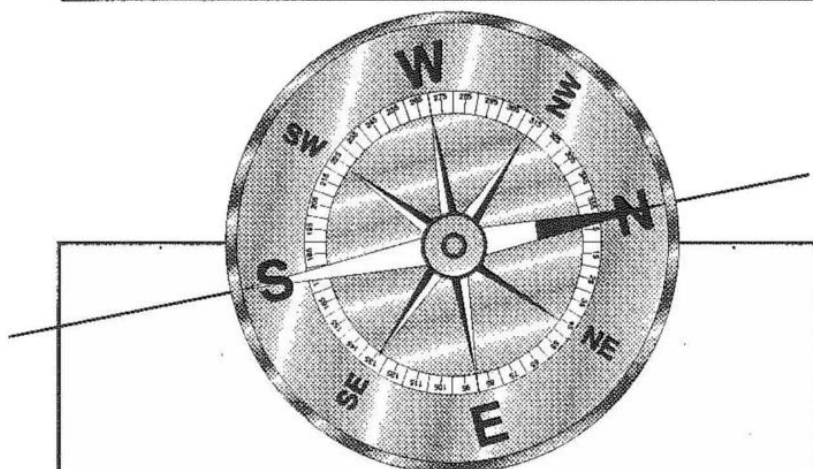

Above site is (extended) inclined towards southern southeast by ten degrees.

Southern southeast street trust – Encourages the host towards financial crest.

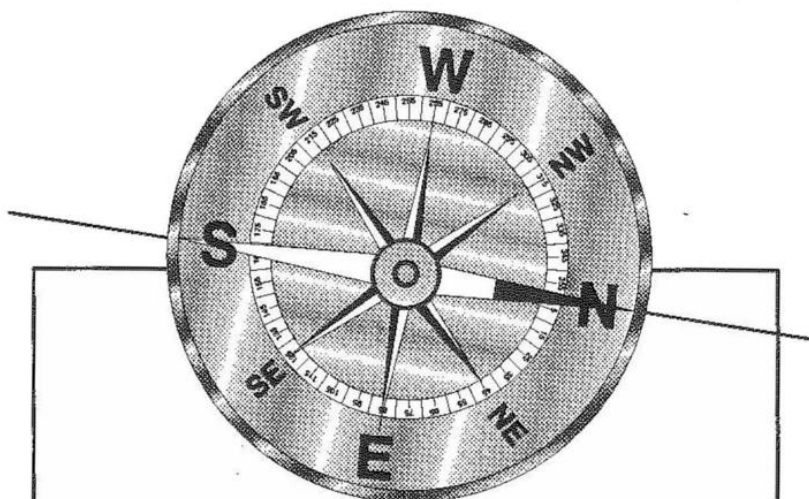

Above site is, (extended) inclined towards southern southwest by ten degrees.

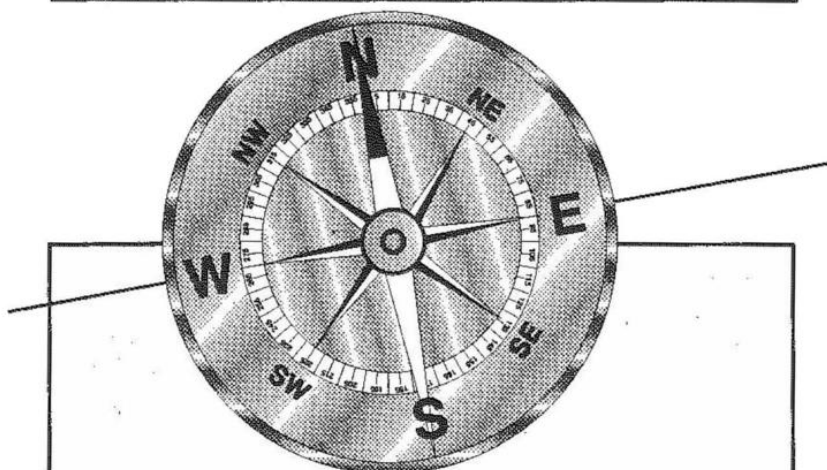

Above site is (extended) inclined towards western southwest by ten degrees.

Growing flower plants in eastern southeast – Blesseth the habitant with greater amusement.

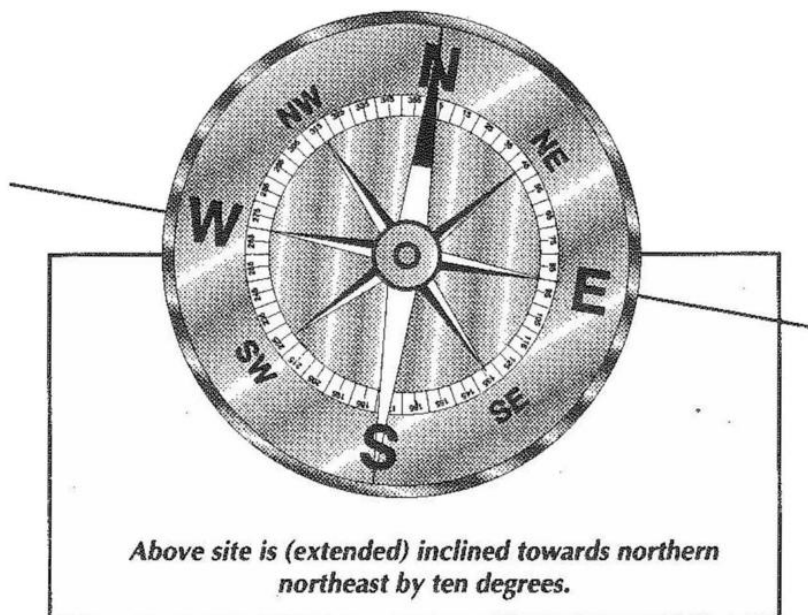

Above site is (extended) inclined towards western northwest by ten degrees.

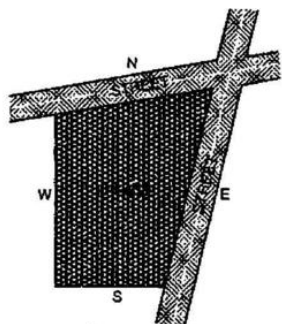

Above site is (extended) inclined towards northern northwest by ten degrees.

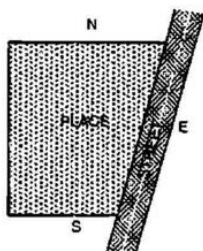

Southern southwest street thrust – Hits at the health and wealth of female most.

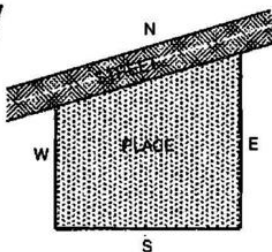

TYPICAL SITES - THEIR SUITABILITY AND RECTIFICATION

There is an extension of northeast in the above site. It is SUITABLE.

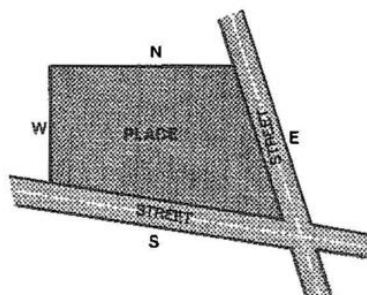

There is an extension of eastern northeast in the above site. It is SUITABLE.

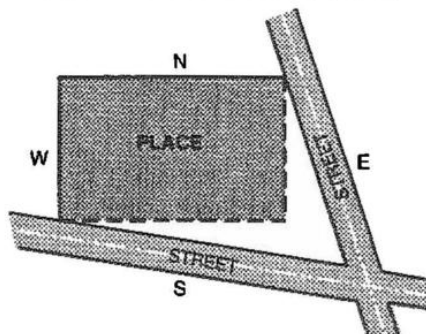

There is an extension of northern northeast in the above site. It is SUITABLE.

Street thrust in western southwest – Punches the destiny of male as a ghost.

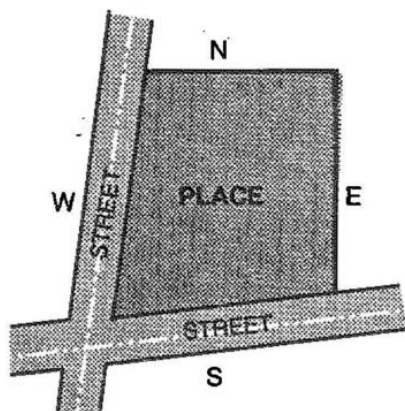

Sites extended in eastern or southern southeast are NOT SUITABLE

Corrected Site

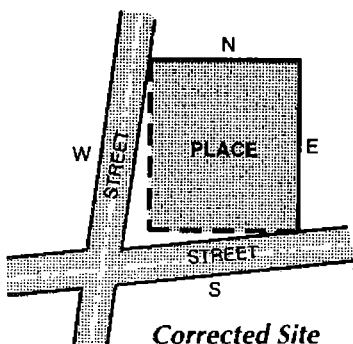

Rectification : Southwestern and northeastern corners must be set to setsquare, and lines are to be drawn ; and extended towards east and south respectively, till they intersect at 90 degrees. The point of intersection denotes correct southeast. Area outside the rectangle should be separated, disowned and clubbed with the roads in east and south. It is always advisable to keep the northern lateral side slightly longer than the southern lateral side by some inches.

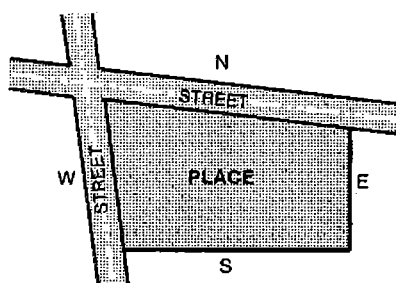

Sites extended in southern or western southwest are NOT SUITABLE

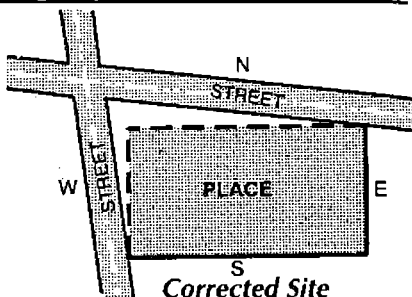

Western northwest street trust – Enthrones forward to be the leader of trust.

and vertical line has to be drawn and extended towards north till it intersects the northern lateral line at the northwestern corner at 90 degrees. Area outside the rectangle must be separated disowned and clubbed with the road in west.

There is an extension of northern - northwest in the above site. It is not suitable. It is rectified aside

Corrected Site

Rectification : Northeastern corner must be set to setsquare and

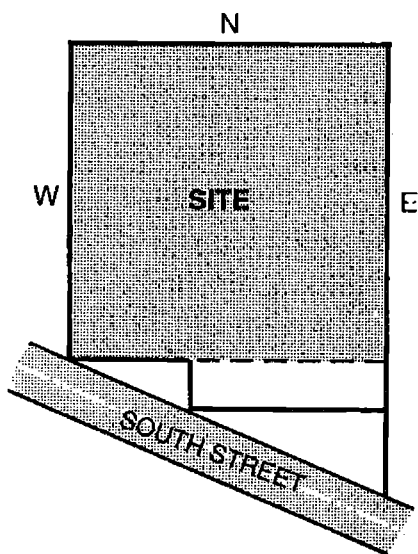

line has to be drawn and extended towards northwest in such a way that it intersects the western lateral line, at northwestern corner, duly ensuring that the eastern lateral side is slightly longer than the western lateral side by some inches. The area outside the

Gate in northern northeast - Showers happiness, the dearest.

rectangle must be separated, disowned and clubbed with the road in north.

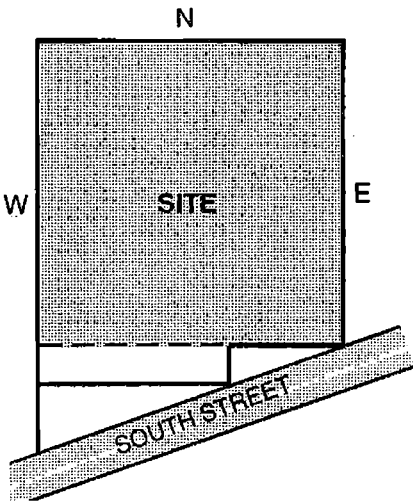

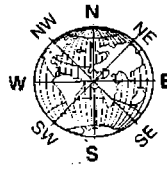

It must be noted that in respect of the plots suffering from extension in eastern southeast, northern northwest, western southwest and southern southwest, above mentioned rectification processes are not yielding desired results when the extended portions are located towards roads. However, they are yielding satisfactory results in specific cases, where the disowned land is located towards a neighbouring plot, and the same is accepted and annexed by the neighbour. In respect of the plots possessing roads even in western northwest and southern southeast, or even the extended portion is annexed by the neighbour, good effects are noticed.

In case the southern southeast of a site is not set to the setsquare and projected into an angle, the south west of it be cut to the set square ; thereby the southeast will project as per setsquare. This is accepted.

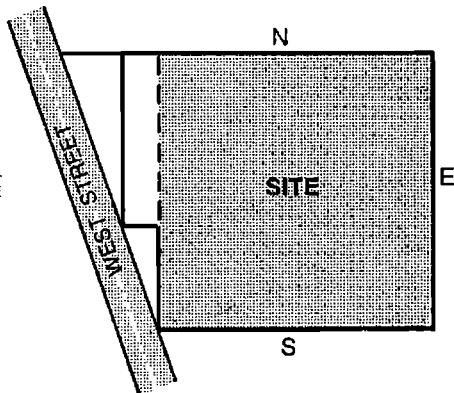

But when there exist a street in south, the corrected southern southeast will face the street focus from western southwest, a baneful effect. Hence, in that situation, the site may be converted into a square, as shown in the diagram.

In eastern northeast gate instal – Invite peace and prosperity to all.

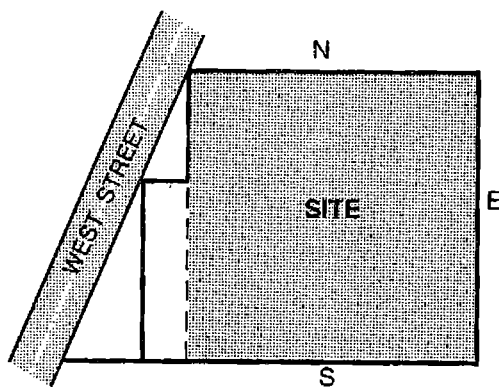

When the southern southwest corner of a site is extended in an angle, irregularly, the southern southeast becut and set to setsquare. Then the south will be as per setsquare ; which is good. But, when there's a street in south, the above correction will face the focus from eastern southeast in south; a bad focus. Hence it is advisable to revive the site into a square, as shown in the plan.

Where the western northwest of a site is increased into an irregular angle, it can be set to setsquare by cutting its southwest. This phenomenon is acceptable. When there is a street in west, the corrected place will become baneful because of southern southwest street focus to the west. Then it may be improvised to a square, as denoted in the plan.

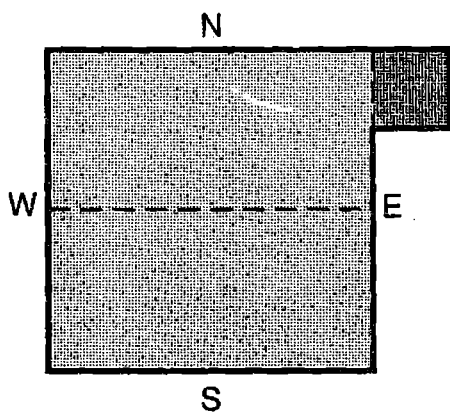

A gate in south is a must besides east to a southeastern block – Make the household enjoy the life amuk.

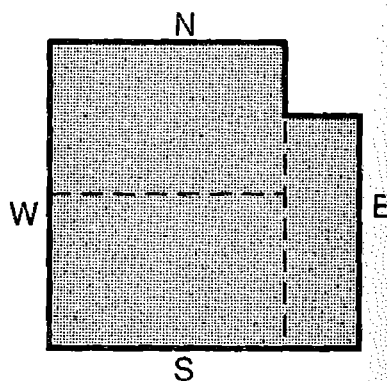

The projected western southwest of a place can be set to setsquare, by cutting off its western northwest. Though its a fair thing, due to existence of the street in west, it becomes baneful because of street focus from northern

northwest to western part . The site, then, can be improvised into a square, as per the plan .

Divergent stucture in northwest – Proves to be a sheer waste.

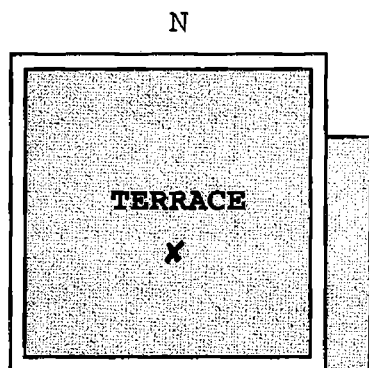

BALCONIES

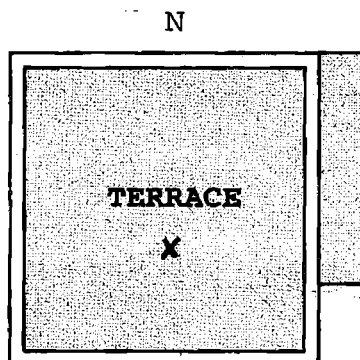

The open space in east and north is essential for a house to get good ventilation and flow of air. In this era of scarcity of land, people, living in flats in multistoried buildings, are worried for fresh air and light. As such the balcony in east and north is a must for the flats in the upper floors of the building. People are building truncated balconies in a haphazard way without knowing their virtues and vices, and as a result of it leading incsecured lives.

The balconies in eastern northeast, eastern southeast, northern northwest, northern northeast should not be truncated. In some cases the balconies in southern southeast, southern southwest, western southwest and western northwest can be truncated, which makes nothing wrong. The balconics east and north should be wider than in west and south; which will augur well. When there is a balcony is south or west, then there must be one is east or north.

| 9,37,29 | Possess diminished northwest | - Suitable. |

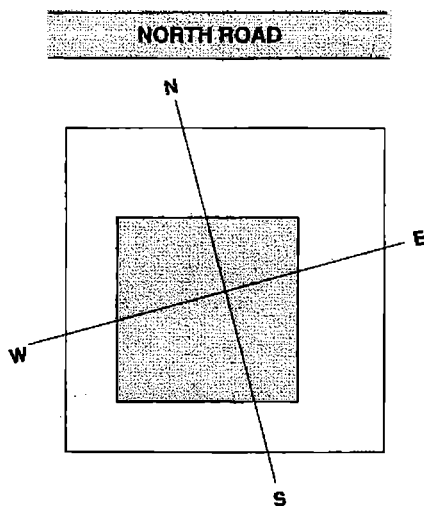

Eastern southeast extension - Boosts turmoil and perversion.

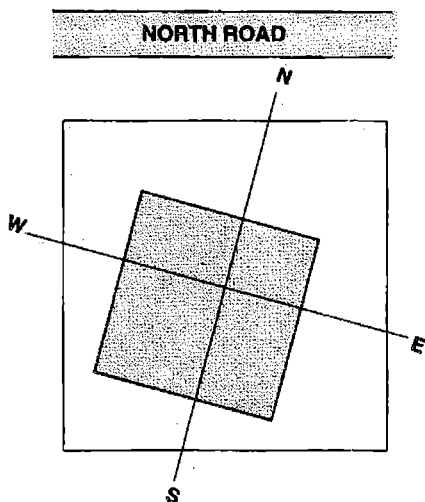

When the road is in the north and the house is constructed as per compass, the eastern northeast within the compound will increase, which augurs well. But southern south east, western south west as well as northern northwest of the arena will also increase, which is inauspicious. Hence the house should be built in line with the road rather than as per the compass. The site is inclined by 15° .

Facing north, if a house is constructed in accordance with the road in the north, not as per compass, but as per Vastu, it should be done by increasing northeast a bit to the plot in north and east, by leaving open space equally in south and west directions. The same method may be followed in respect of the houses facing other directions. The site is inclined by 15° .

Angular extension in southern southeast – Breeds quarrel and insult.

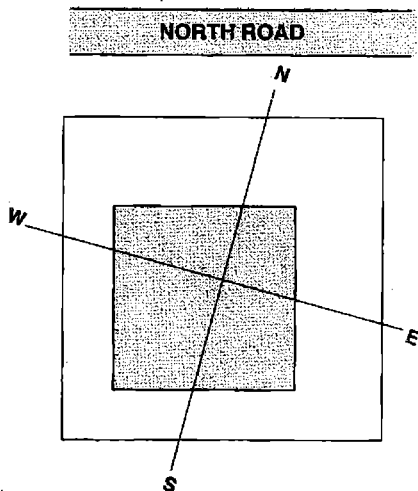

When the house is built in a site having a road to the north, with the main entrance facing towards north, as per compass, then the northern northeast of the arena will increase, which is auspicious. But by the by the arena in eastern southeast, southern southwest as well as western northwest will also increase, bearing upon uncongenial situations. Hence it is better to build the house according to road-line only. the site is inclined by 15° .

When the road is in north the house may be built with main door facing north, according to the line of the road, rather than as per the compass; leaving an equal space in south and west and in east and north, increasing northeast, a bit.

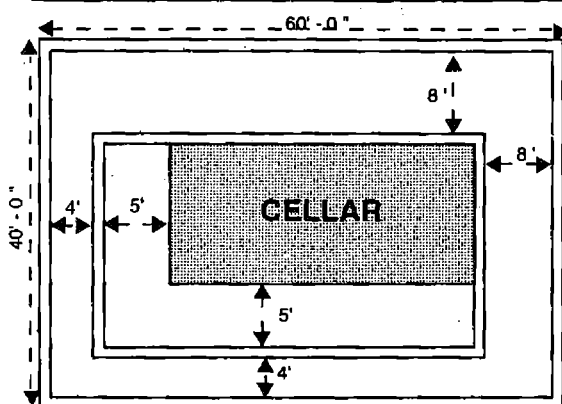

The same procedure be adopted in respect of the houses facing other directions, too. The site is inclined by 15° .

*Extension of southern southeast not by the road in right angle --
Benedicts the glory of the male.*

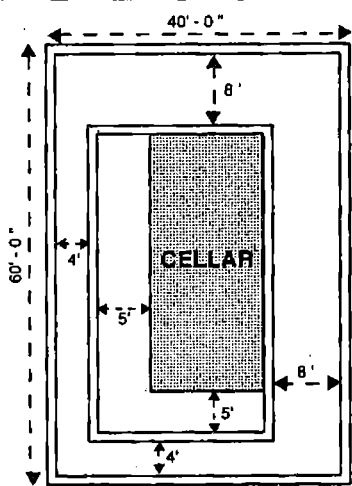

DESIGN OF CELLAR PORTIONS

In cities, where the cost of land is very high, cellar portions are built, to augment the space available. In such cases, it must be ensured, that depressions are not caused in southwest, southeast and

northwest. The western and southern portions of the cellar must be closed, as shown above. Building the entire vacant space in cellar is not at all advisable. At least a wall of two feet breadth must be raised in west and south as shown above.

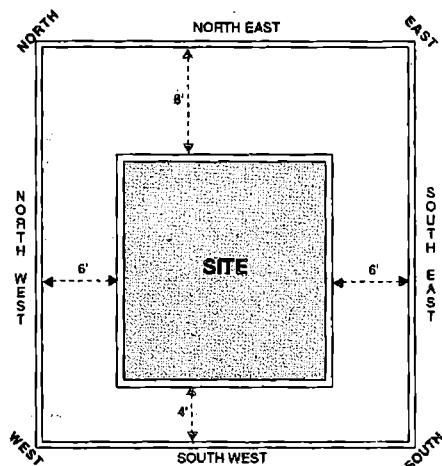

are arranged to enter into the cellar.

The entrance for the cellar must be placed in exalted position in east i.e., southern southeast, western northwest or north. An entrance in western northwest, or southern southeast can be provided to business or other type of cellars, thro, hollow stairs; or thro' north or east with the help of steep stairs only touching the land below. The same can be arranged in southern southeast or northern northwest with or without touching Land. The northeast will be elevated if the ramp stairs

Extension of southern southwest – Deludes joys of female rest.

OPEN SPACE IN INTER DIRECTIONS

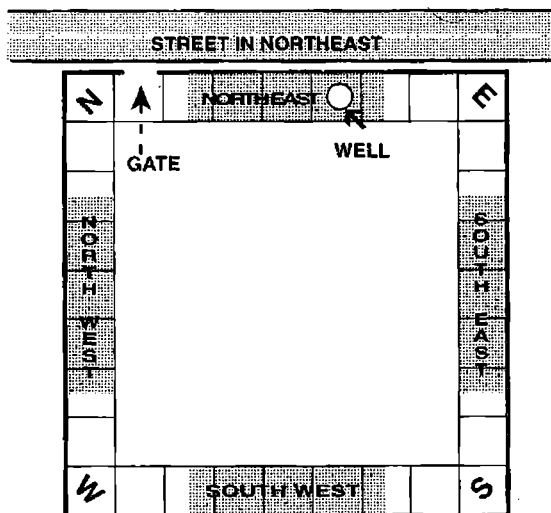

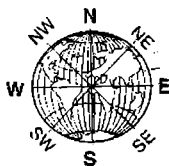

While constructing a house in intermediate directions, the following points should be borne in mind about the open space around the house. There should be an equal open space in southeast and northwest neither more nor less. The space in southwest should be less than the space in southeast and north west. Except the street focus in northeast all other that is from southeast, southwest or northwest, in angular form, are vicious.

SITES FACING INTERMEDIATE DIRECTIONS PLACING OF BOREWELL AND GATES

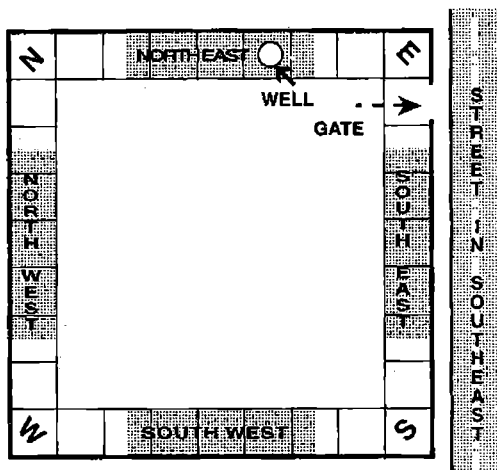

We often come across sites facing intermediate directions viz., Northeast, Southeast, Southwest and Northwest. The gates and well can be provided as shown in the plans. The construction of house should be started from southwest.

Western southwest extension – Hosts lifeline contraction.

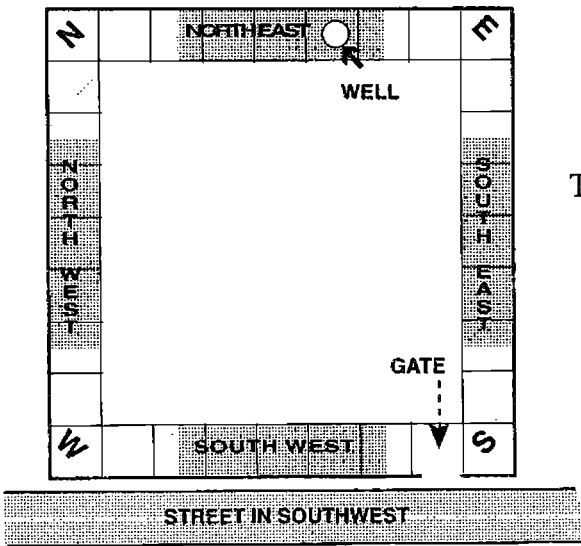

The gate in north and the well in north east.

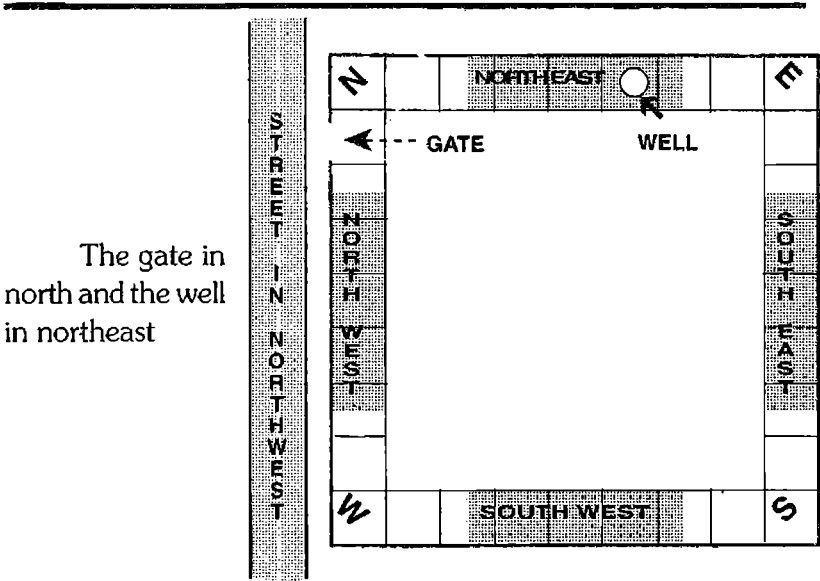

The gate in east and the well in northeast

Angular extension of western northwest – Indicates frivolous nature of host.

The gate in South
and the well in
North east

The gate in
north and the well
in northeast

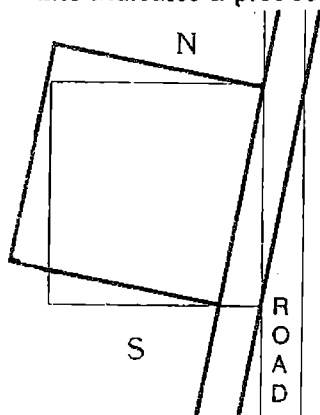

Away from the road rectangular extension of western northwest –
Rejuvenate the joyous life to the best.

INCLINATION OF THE PLOT - FIXATION OF MAIN DOOR

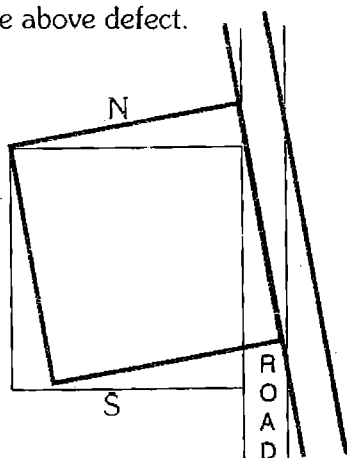

Generally plots in any layout do not find themselves as per compass and hence the phenomenon of inclination of a plot as per the formation of roads comes up. In such circumstances extension or diminution of one or more intermediate directions can be noticed, and it influences the fixation of main door in the following manner.

Note : Thick line indicates a plot increased (inclined) towards a particular intermediate direction, by 10 degrees or more. Thinner line indicates a plot set as per compass.

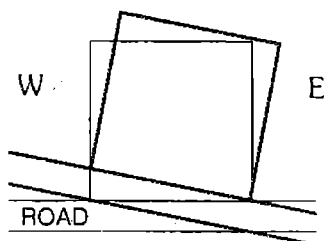

1. Street extending eastern northeast: In this case the entrance provided in eastern northeast faces eastern south-east due to the inclination or extension of the plot by 10 degrees or more. Hence another entrance must be placed in northern northeast to rectify the above defect.

2. Street extending eastern-southeast: In this case the entrance provided in eastern northeast faces eastern northeast due to the inclination or extension of the plot by 10 degrees or more. This is a good feature as per Vaasthu, as it is better than the door facing northern north east.

Extension of northern northeast – Expansion of wealth riches in the chest.

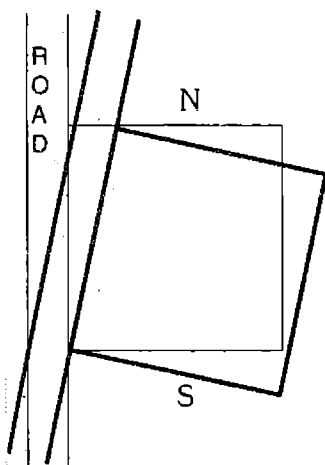

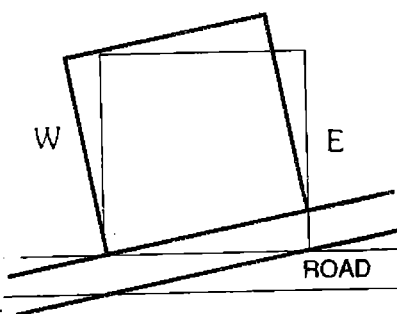

3. Street extending southern- southeast :

In this case the entrance provided in southern-southeast, actually faces southern southwest, due to the inclination or extension of the plot by 10 degrees or more. In order to rectify this

defect another entrance must be placed in northern northeast.

4. Street extending southern- southwest :

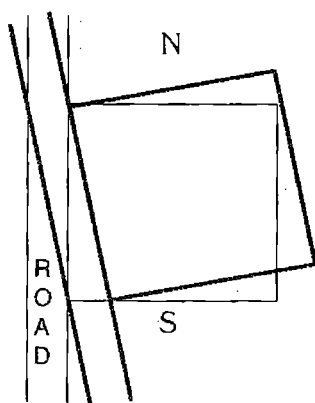

In this case the entrance provided in southern-southeast, actually faces southern southeast due to the inclination or extension of the plot by 10 degrees or more. In order to rectify this defect another entrance must be provided in eastern northeast.

5. Street extending western- southwest :

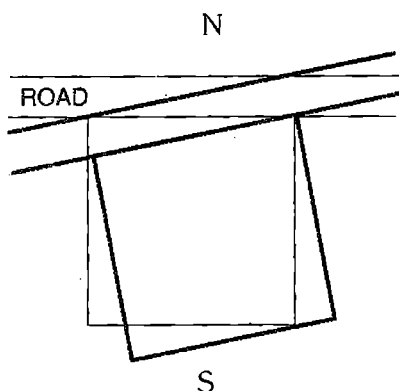

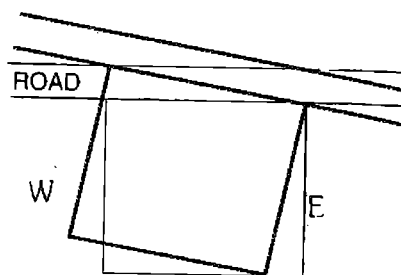

In this case the entrance erected in western-northwest, actually faces northern northwest due to the inclination or extension of the plot by 10 degrees or more. In order to rectify this defect, another entrance must be placed in northern northeast.

Northern northwest extension – Lineage of the host moves unto contraction.

6. Street extending western- northwest : In this case the entrance provided in western- northwest, actually faces western southwest as the plot is inclined or extended 10 degrees or more towards western northwest. In order to rectify this defect, another entrance must be provided in eastern northeast.

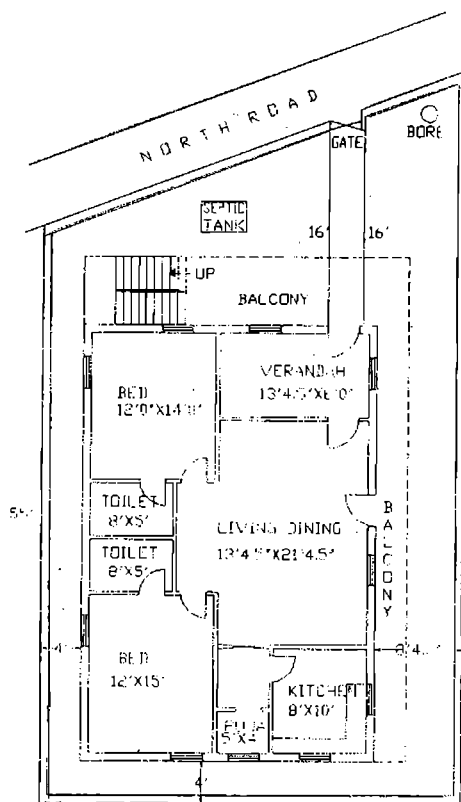

7. Street extending northern- northwest : In this case the entrance provided in northern- northwest, actually faces northern northeast, which is a positive feature as per Vaasthu.

8. Street extending northern- northeast : In this case the entrance provided in northern- northeast due to the inclination or extension of plot by 10 degrees or more, actually faces northern northwest. In order to rectify this defect another entrance must be provided in eastern northeast.

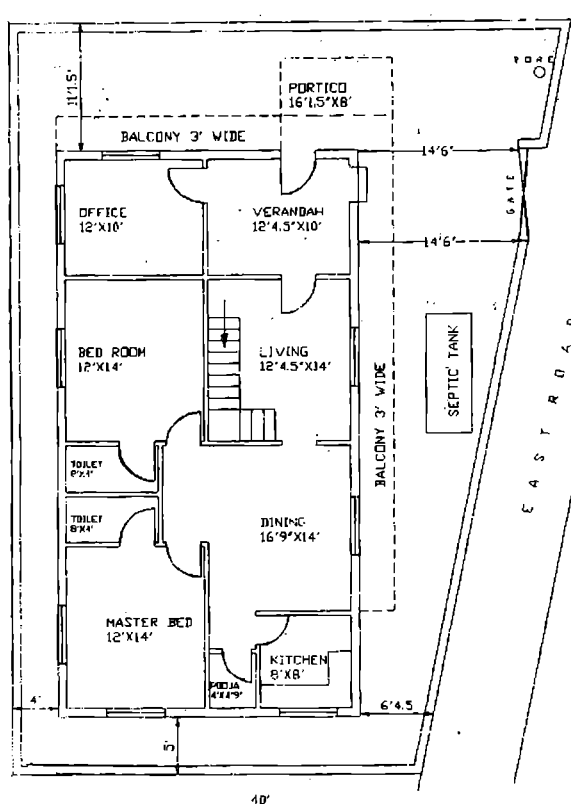

Chopped curve in southeast – Drives far away the insult.

A house located by the side of a road extending eastern northeast, also possesses an extended eastern northeast. The gate erected in the compound wall, running on eastern side actually faces eastern southeast. Hence the gate must be fixed, in such a way, that the gate should measure equally on its both sides from the house, as shown in the picture above. Then it will face east and reap good results of Vaasthu.

Southwest chopped curve – Arrest the holocaust move.

A house located by the side of a road, extending northern northeast, also possesses an extended northern northeast. The gate erected in the compound wall, running on northern side, actually faces northern northwest. Hence the gate must be fixed, in such a way, that it actually faces north, being measured equally on both sides of the gate, from the house, as shown in the picture above, to reap the best results of Vaasthu.

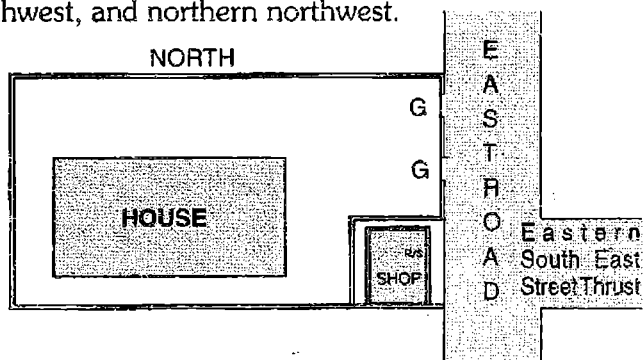

Chopped curve in northwest – Binds one closest.

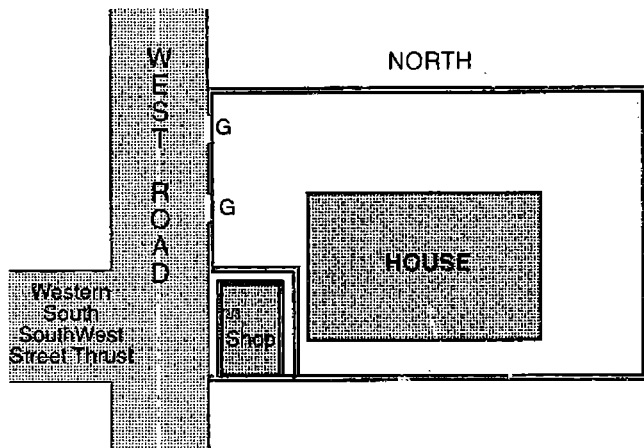

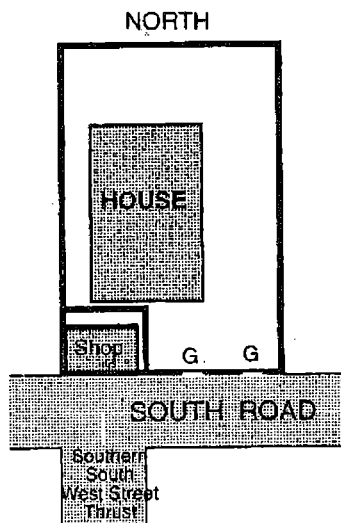

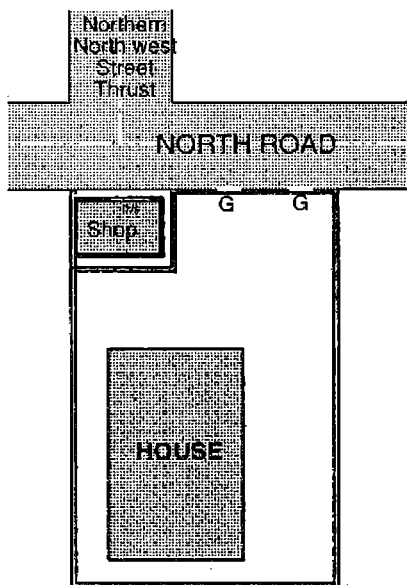

METHOD TO BE ADOPTED TO AVOID STREET THRUST

Suppose a site has a street focus in eastern southeast. In such a case, that portion of the site, which receives a street focus, must be separated and sold away. There is no objection if the buyer builds a house in it as he will be well - off in it. In case it is not possible to do so it must be separated from the main plot, by constructing a compound wall, and a room therein, as shown in the plan above, must be constructed and disposed off. Albeit the effect of street focus to the original site, which is baneful, the separation of that part and construction of a shop, turns it into a beneficial one to the purchaser, as it would become a street focus in east for the shop. In case the owner builds first floor, the same may be done on the separated room, too. This will ward off the evil which effected in the beginning. Above procedure must be adopted in avoiding a baneful street focus in southern southwest, western southwest, and northern northwest.

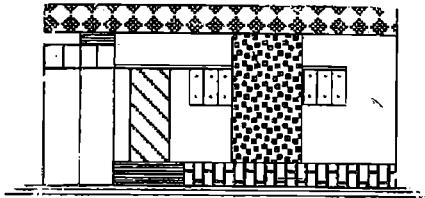

When it is not possible to build a shop, a wall in the length of street focus can be built with a height equal to the height of the house, keeping a space in between; or to the height of the terrace, if there exists one. The wall will stand like a sign board, warding off the evil effects of street thrust.

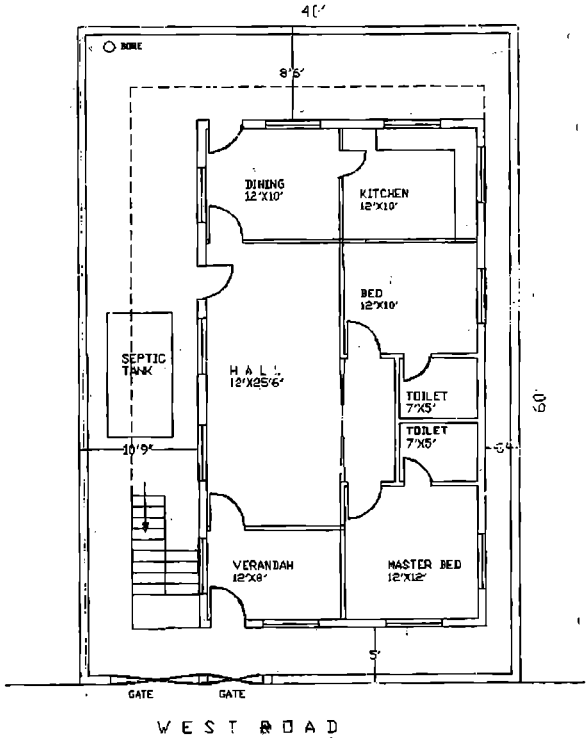

Extension of eastern northeast - Engroves life prosperous and zest.

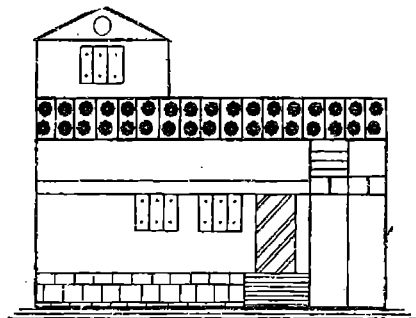

Debilitate not the northeast – Decelerate not the lineage next.

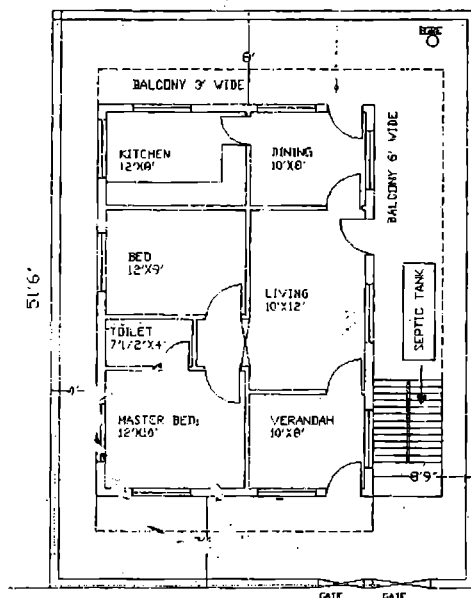

ELEVATION

Chop not a corner unnecessarily – Opt not a brain teaser willingly.

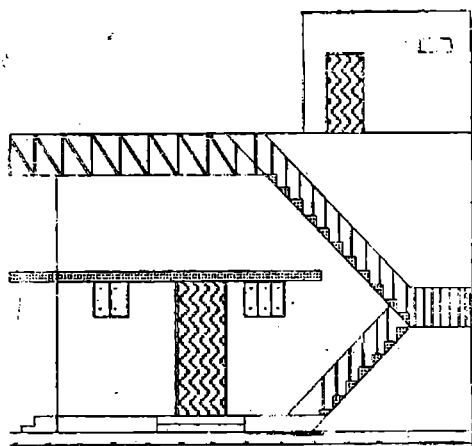

ELEVATION

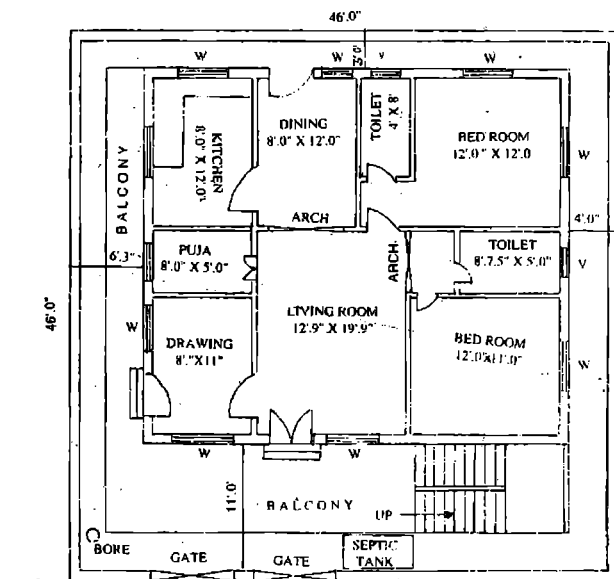

SOUTH ROAD

Closure in the east – Endangers males most.

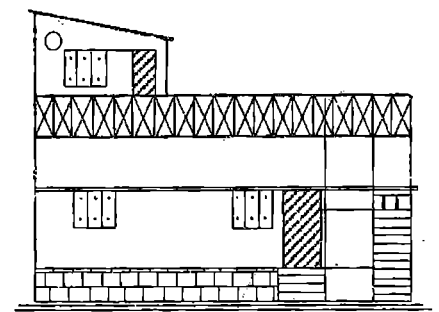

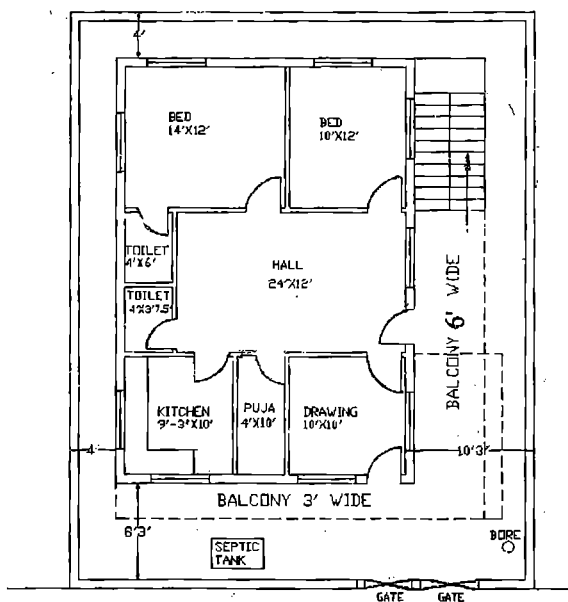

ELEVATION

NORTH ROAD

Close not eastern southeast – Enframe not the avenues of peace and rest.

**ELEVATION****EAST ROAD**

Closure of south – Prosperity of female is an ensured truth.

LETTERS TO THE END

APPLAUSE

1. **T.S. Prakash Rao, Vaasthu Silpi,
Rajendra nagar, Danavayipeta, Rajahmundry, Ph : 72914.**

In this world from a yeoman to a noble. an equally useful and necessary ' safe vault ' is house. Vaasthu is the science of construction of a house. Though there had been many books on this subject in the past, " The Secret World of Vaasthu" written by Sri Gouru Tirupati Reddy is unique of its kind. Many have attempted to excel it, but of no avail. It is better to make a debut of one's own, than to entertain on others.

The book has lot of information about constructing a house, the bonafides and malafides of Vaasthu, with a scientific touch of its own. The motto, "Service to Humanity and Welfare of Mankind", is much appreciated and applauded.

The book is the yield of laborous and hard work and intensive tour of India, at large, with a zeal and lot of expenditure in lakhs together.

2. **Bhogineni Venkata Ratnam,
Vastu Sanchalak , Kavulooru, Krishna Dist Ph : 887290.**

Science means a command, and Vaasthu means living ; thus Vaasthu Shashtra is the Science of living, which commands the way of living in general.

The classical literature on Vaasthu written by our old sages, which has become out of date and is not applicable to the modern changed situation. Sri Gouru Tirupati Reddy, has endeavoured to seeve out the useful and applicable one and appended his vast experience to it.

Close the road side southwest – Enjoy the riches at breast.

The book "The Secret World of Vaasthu" is in good form, lucid, simple, and clear.

May almighty bless Reddy to enhance this world of Vaasthu, with his ever lasting efforts, and keen research.

3.

**P. Bala Veerappa,
Vemana Oil Mills, Proddatur.**

Dear Sri Reddy Jee,

We had been the Co-partners ever since 1952 in one or the other business wings.

With your long ever lasting friendship, I am also blessed with the knowledge of Vaasthu.

I am very much regretted to note that many of your followers are boasting about themselves, who were once enjoyed your property ; and now have become ruthless and ingraturders, fie upon them !

Is it a loss to the river when crows pick up drops with beaks? and can any one ever have stopped the wheels of Nature the Almighty turning on and on ?

4.

P.V.S.S. Raju, B.E.(Civil), Hyderabad.

Dear Sri Reddy Gaaru,

Of late, I happened to visit the city Auckland in Newzealand on a business trip. During my visit, I passed through a street called Queen's Street in Auckland, which is the pivot of the entire business activity and is an important centre for banking, import and export, trade in gold, gems and diamonds etc. The street runs downwards from south to north and its length is about two Kilometers. Sea is located at the northern end of the road. Further the road also slopes from west to east.

Closure of west by the road – Rouses the glory of the host abroad.

Entire landscape reminded me of your words that riches, wealth and prosperity can be witnessed in an area, which slopes from south to north and west to east and the location of water either in north, east or northeast, is the most ideal state as per Vaasthu. Enchanted by the opulence of Queen's street I could not resist the temptation of sharing with you this experience, which in my view clearly demonstrates the ubiquitous power of Vaasthu.

5. *Jandhyala, Cine Director, Madras.*

Recently I had bought an old house in Madras, and entered the same after effecting alterations from the view point of Vaasthu, as suggested by Shri Gouru Tirupathi Reddy. Initially when we visited the house Shri Reddy had remarked, that the resident or owner of the house would not possess male issues. I was astonished at his remark, because I really bought it from a person who had only female issues. Shri Reddy added, that diminution of northeast and extension of southeast are responsible for the absence of male issues, and said that those defects can be rectified. Subsequently I got those defects rectified, and entered the house on 15th April 1989.

6. *Manam Hrishikeshava Reddy,
Kadirivaripalle, Cuddapah (Dist).*

Dear Sir,

It chanced to go through your book "Vaasthu Shastra Vaastavalu" in Telugu. I was a staunch theist, as my father was also a follower of Gora; and had been the member of Communist party till 1962.

When I read "Vaasthu Shastra Vaastavalu" in Telugu, I was so impressed that I entreated you to visit my house and recommend rectifications, which you did on 26 Feb, 1989.

Closure of northern northwest - Rules out the chances of rest.

Relaxing in the Verandah, you glanced at the house in front of us and told that the inhabitants of that house will be in miserable, plight, such as addicted to drink and such kind of bad habits, and will have many enemies. I was astonished at it and told you that house was also belonged to us and my father had been addicted to, and my aunty had drowned in the well. The same situation was with my younger brother.

The house was closed in northeast. and the kitchen also was there only ; and was facing eastern south east. Above all the village Burj of guard was in northeast of that house. Later you suggested some corrections to it, on my request. When I had the things and happenings true to the fact, I became a staunch believer of Vaasthu. Why not I ?

7.

**Malasani Venkateswarlu, Managing Director,
Mangur Oil Mills Pvt. Ltd., Ongole.**

Dear Sri Reddy Garu,

Accept my hearty and warm congratulations for the lucid, simple and clear written book "*The Secret World of Vaasthu* ", which made me a staunch believer of Vaasthu.

We were getting on well in our ancestral house, facing east with the main entrance in the north; southwest cut off, built on western end, with open space in the east and the north. Then the whole village was under the control of my father.

The tables have been completely turned and he met with a sad demise with paralysis, after a long struggle and court litigations, and my brother became handicapped within 3 years of purchasing an add-yard in southeast to our old house.

This happened so, because the yard was meant for domestic animals, and a wearhouse for agricultural material. Further, all the day long the menfolk used to be there only.

North is closed - Finances are drained.

It was in southwest block with street focus from western southwest, besides the extension in southern and western southwest. It is facing east with 11 beams and the entrance, in western southwest. The projection is less elevated in west than east. A part of it the northeast has been occupied by others with my father's consent. Thus northeast has been lost. The open is more in west; south is open when north is closed. Hillocks are there in northeast. Thus every thing is rectified as per the book. That's why I approve it the Modern Geeta !

8. **Nallapu Reddy Harichandra Reddy ,**
Draughtsman (Civil).

The India Cements Ltd., E - 7, Narayan Swami Nagar,
Chilamakooru - 516 310. Cuddapah Dist.

Dear Sri Tirupati Reddy Garu,

With your kind affection, I have travelled with you through out India in 1989 ; and had the knowledge of Vaasthu, too. Because of your favour and consultations I have made some changes to my house and was blessed with a son, a long cherished hope. I made some experiments on some other houses, with good results, ofcourse, with your help and cooperation in laying plan etc., at many cities and towns. Now, every Sunday is Vaasthu Consultation day.

To prove and in support of the book the "The Secret World of Vaasthu" , I would like to mention one / two examples.

In our village the temple of Sri Hanuman is at stand still, even an amount of Rs. 2 lakhs are in the Bank. It is so because the site is projected in western southwest, a street focus from western southwest ; a well in southern southeast, and is built on eastern border, facing west.

Street thrust in eastern southeast – Beats at the sources of wealth and rest.

Contrary to it there is a bit small Hanuman, who is attracting devotees a lot. This happened so, as the deity is facing north and the road, in front of it, is in north and sloped down towards east.

Another example. A village devastated due to frequent quarrels in Kodigandlapalle, with many Vaasthu defects ; The road leading to the village is cut in northeast ; village south west is projected and cut in northeast ; a small brook is in south, village is sloped towards west and there are stony hills in southeast, east and northeast, the worst of its kind.

9.

*Thangella Karunakar Reddy,
Technician, Telephone Exchange, Tirupati.*

Dear Sri Reddy Garu,

I am very much grateful to your advice for some change in the structure of my home, that is, keeping a door in east in the open space of my house ; which augured well, in fulfilling my long cherished hope, that is to have a male child, has been accomplished, inspite of evil thinking of abortion (with a fear of fourth successive girl child) being deferred to on the medical advice. It proves the inavertable power of Eastern door and movement towards it. Now, according to your advice Sir I am trying to acquire the eastward place of 10 feet from my neighbours. Hope that will bear fruit with your blessings.

Southern southeast street trust – Encourages the host towards financial crest.

10.

Dasari Manohar Rao,
Editor, Ujjwala Daily, Kurnool.

Dear Sri Reddy Garu,

I am the worst haunted ill-fated and mentally worried person in this world. No stone has been left unturned, for my treatment, in medicine, yantra, tantra and wreathed earth and space into one, but no avail, even with pyschiatry, and it is so dreadful even to just think about it, enthrobs my heart like anything.

At this juncture, because of your keen and darling interest, brought me or say pulled me out of that Devil Jaws, as you have suggested some changes to my house with detailed plan etc., with a firm blind faith I did what ever, it is said or advised; and finally, without any shanti or homa, I entered my home and, of course, getting on properly, regaining my health, just like I have taken another birth.

Dear Sri Reddy Garu, Namaste,

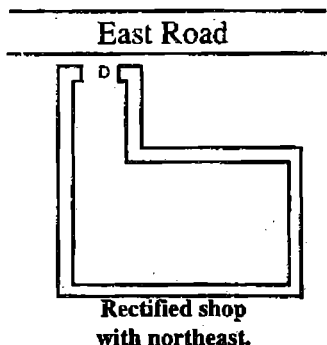

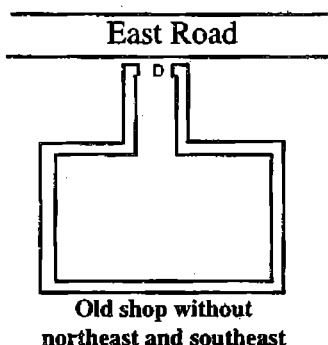

At the out set of your visit of our shop on 20-12-93, you have advised to make some corrections to our shop, which had cut off in northeast and southeast, with eastern movements.

In accordance with your advice, we had exchanged the places that the person who was the owner of north eastern

**Southern southwest street thrust – His at the health and wealth of
female most.**

place had been shifted to the east and I have acquired that place. Within a month of that acquisition the profits had made a graph soaring up. Hope, all our Kannada friends will follow your advice and reap good profits.

12.

Nallamala Polythene Bags Ltd.,
Allagadda - Kurnool (Dist) Ph : (F) 2115, (R) 2116

Sri Tirupati Reddy Garu, Namaste,

I am very much obliged for your kind advice to make changes to my shop, which had eastern northeast closed and open in southeast ; along with a door in northern northwest to northeastern room, besides a door in northern northeast to godown : all are Vaasthu defects.

For want of money we were unable to comply with your advice to close the southeast and fixing a door in north in exalted position. But, soon after the changes have been done, it augured

Street thrust in western southwest – Punches the destiny of male as a ghost.

well and unexcepected lucrative profits poured in.

Once again I thank thee for your free consultation and plan of my house and hope, that your yoeman service will be utilised fully for the welfare of the society, as a whole.

I thank thee once again.

13. *Dasari Narayana Rao, Cine Director, Madras.*

Dear Sri Tirupati Reddy Garu ! Namaste !

I have read your book " Vaasthu Sastra Vaasthavalu" in Telugu. I consider it not merely a book, but a key to health, wealth, prosperity and happiness. In my view, it is very difficult to convince a person, who does not believe in Vaasthu, about its positive and negative effects. I congratulate you on your endeavour in dispelling the doubts and fears, in the minds of general public, about the efficacy of Vaasthu, created by a group of selfish individuals. I feel that every reader of your book would become an expert on Vaasthu.

Dear Readers,

I do hereby submit my experience as per the eternal truth of existence of science of Vaasthu, beyond doubt.

Western northwest street trust- Enthrones forward to be the leader of trust.

I had the favour of a visit to my factory at Tumkur by Sri Tirupati Reddy Garu, a well known pandit of Vaasthu and had the gate of my factory corrected from southern southwest to southern southeast, which yielded handy profits forthwith, above our expectations.

In consultation with Sri Reddy garu, we have established Yashoda Conductors factory at Konigal. Out of one thousand factories of this kind ours stands at 5/6 th position with a turnover about 25 crores per annum.

Hence it is our earnest request to all the entrepreneurs to establish their factories etc., as per Vaasthu and put up the level of our country high on par with the other developing countries.

Gokula Sudhakar Reddy,
H.No. 3-9-661, Sharada Nagar,
Ramanthapur - Hyderabad.

Dear Sri Reddy Garu,

It happend to see your book "*The Secret World of Vaasthu*" when I was in frustrated condition, owing to the death of my father, within two years of the construction of a house in my name, in south eastern block , closing the northeast with a room.

Knowing the defects of my house, I demolished the house completely and constructed two rooms in south west of that site. With the help of your book and the loan from LIC, after due changes in the plan on your advice, I have completed it and entered in it on 3-8-92.

Street thrust in northern northwest – Piercing lance to the pleasures of women, just.

Thereafter series of favours showered ; my son had been to USA, second one completed MBA and established Marketing Consultancy of his own ; my daughter has been admitted into BHMS ; and above and all I got promotion and we are all at peace. For all this I thank thee once again.

16. **Chandana Mohan Rao, Chandana Brothers,
Ladies and Gents Cloth show Room,
Abids, Hyderabad-1. Ph. 558562, 558583**

Dear Shri Tirupati Reddy Garu,

During Feb 1990, when our show room building was under construction, you had paid a visit to our site and suggested several modifications, and told that the shop has street focus in northern northeast, which attracts riches and keeps the women folk in good honour. Accordingly we spent around Rs. 50,000 and effected the alterations suggested.

While we were afraid that our shop suffers from a baneful street focus, you assured us, that everything would go well, and we would earn name and fame in the society. We have been reaping all those desired effects, till this day.

17. **G.Pulla Reddy,
Specialists in Quality Sweets,

Hyderabad -1. Ph. 201833,203176**

I know Sri Gouru Tirupati Reddy for the last 10 years. Even

Street trust in northern northeast – Enhances avenues for happiness of females the richest.

before coming across Shri Reddy, I had some acquaintance with the science of Vaasthu. I effected certain modifications in my house, after due consultations with Shri Reddy. In 1990 when Shri Reddy had expressed a desire to open his office in Bangalore, I persuaded him to open the same in Hyderabad and I inaugurated the same. He has been suggesting modifications and plans to various factories and houses as per vaasthu.

I opened new shopping complex at Begumpet in Hyderabad after due consultations with Shri Reddy and I could reap very encouraging results. I wish that every body should follow Vaasthu and reap good results.

N.V. Basava Raju,

Krishnagiri, Dharmapuri Dist. Tamilnadu.

Sir,

I missed a lot about your Vāasthu, because I could not find the book and your address, for the long past.

One of my relatives have acquainted me with the book and your visit to Madanapalli. I went through the book and was impressed much with your forecast, about the effects of putting heavy material in northeast, that : is I met with an accident near Altibale on 7-10-87, as the heavy materials have been dumped in northeastern room of my house.

I had the grace of your presence at my house on 8-11-87 with your friend Sri B. Venkata Ratnam. At that time while passing by, you have told that the Rock Pool Installation factory, which is near my house, will not go long as the boiler is in north east with a southwestern street focus. This has come true. Similarly the T.K. Chemicals, which has a tank in west and northeast elevated, was also sold out, as it did not run well.

Road running down towards west - To the inhabitants causes unrest.

Hence, in my opinion, the government should take care in establishing factories with the help of engineers, who lack the knowledge of Vaasthu. It is better that the scholars of Vaasthu, should also be consulted before the establishment, for the betterment of the public, at large.

Bhagyanagar Chlorides Pvt Ltd.,
S -3, Sapthagiri Apartments, Srinivas nagar,
Ameerpet, Hyderabad . Ph : 08459 - 7234

On our earnest request,

Sri Tirupati Reddy Garu, paid a visit to our facotory, at basement stage . It faced east, with roads in east and south. The northeast of the site from south to north was lowered by 8 feet.

When we expressed our fears about the site, Sri Reddy gave us full guarantee that in case this site is of no use, then there is no use of the existence of science of Vaasthu on earth ; and assured us the best results of the site.

The factory has been constructed as per his plan and the production, started in April, 1992. The turn over and target are satisfactory ; and we possess a respectable place in commerce. Sri Reddy, had been kind enough to propose some more minor changes to our factory, recently. They have been implemented and to our favour, now, there is a road in north, tantalisng our future.

Road gradient from south to north – Ushers prosperity, and wealth
without dearth.

NATURE IS THE TRUE LAW THE WORLD IS BOUND TO NO MAN

Had it been otherwise, the Man would have changed the world to his own ambitions, but, since the world is bound to No Man, it is what 'It Is', doing nothing in vain, belonging to None, with impartial attitude. Its ultimate goal is to Sooth the Soul in Peace.....

Nature is full of intricate chain life. The cosmic power, the Shakti exists and throbs thro' every read and giant; in cosmos and Black Hole. It is omnipresent and omnipotent. The size, and the shape have no say upon it, as all the creatures even from micros to macros are in Action in the same manner in this vast everlasting world.

Man is a thinking read. He always tried to reach the nucleus of this amazing Nature of wonders and mysteries. Even after a long past He hadn't past a millionth of the way to reach the goal. Still he says I have many miles to go before sleep.

The Nature of Man is also powerful. Try and Try and Try again, So that oneday you will gain, slow and Study wins the race. Failure is the stepstone to Success. This he treads upon, on and on and on.....

The great men of the past had strived and served for the betterment of the mankind, and Humanity. Had they been taken to their own selves, the commodities and comforts such as simple shaving blade to supter sonic jet, wouldn't have been invented nor

Road running down towards south – Source of all kinds of dearth.

the atomic power discovered. But, since they spilt their last drop of blood for the sake of Man, still they live in this world in our Hearts and Minds. Hats off to them All.

Like all other arts and sciences the Science of Vaasthu, has come to us in its modern form, after undergoing many changes alongwith the time, from 6000-3000 BC.

The times are changing, the needs vary, necessities are different, the preferences and causes worry us. The approach to this science, according to the culture and civilization, with experiments and experiences - self and others - become physical and materialistic. New rules and regulations have proped into the place of the old.

To bring the modern phenomenon in Vaasthu, in this age of electronics and computers many temples, monuments, buildings, industrial installations, through out India and the geophysical aspects of the countries of the world, have been keenly observed to come up to this new format. None can claim oneself the supremacy in any field, since Art is long. Life is short. We are earning the knowledge with the help of the wisdom of the Past, coming through the Ages from Sages. Praise unto them All, who Immortalised Man.

It is all but the great deal of efforts of Sri Mudragada RamaRao, this modern Vaasthu has come into practice; which enabled many scholars of Vaasthu to guidance the common people to build the House, a Home of Rest, Peace and Prosperity.

HAIL TO THEM ALL.

Add-yard in southeast - Makes one an epicurian fast.

Beehive inside the house – Cause not trouble, but not amuse.

SAVE TREES AND SAVE HUMAN LIFE FROM EXTINCTION

Right from the evolution of Man, trees have been providing food, fodder and shelter to the human beings in a selfless manner. However, the modern man is cutting the trees irrationally for his selfish gains and thus causing an imbalance in the ecological system. Traditionally neem and tamarind trees have been attached a lot of importance in Indian medicine on account of their intrinsic medicinal values. Same fact has been recognised by the environmentalists of the world and presently they are considered as the sole conservators of environment. That is why, every member of society should invariably grow a neem tree or tamarind tree in their

In case of space constrain may be grown in traffic parks. Since aged trees are elders growing trees becomes responsibility duty towards spirit should
